#### PREFACE

"The Author is a learned Parsee, well qualified to speak concerning the antiquarian aspects of his religion, and likewise practised in gleaning information in regard to the anthropology of India

The work is throughout sound in quality, being composed critically and in the light of wide reading and careful observation. As such it can be recommended to every scholarly student of India, while anthropologists in general will note this welcome sign of the activity of their brethren of the Anthropological Society of Bombay "—The Athenœum of 13th July 1912, pp 43-44

"Such associations as the Anthropological Society of Bombay justify their existence and perform a public service when their members add to the stock of common knowledge by such papers as are to be found collected in this volume. They supply a deficiency which undoubtedly exists. Mr. Modi, an educated Parsee gentleman, and a prolific writer, has recorded in his essays much that would not otherwise be published of his country men. There is much to be learnt of Indian life from these papers, which Mr. Modi should continue to write and publish "—The Academy of 14th September 1912, pp. 335-36

"This is a collection of thirty papers on anthropological subjects read at various times during the past twenty five years before the Anthropological Society of Bombay — His many publications afford proof of his deep interest in such anthropological subjects as are here treated — He gives evidence of wide reading on the last named subject, while on the former he writes from personal observation and after more or less scientific inquiry — It is worthy of note that the writer, in addition to his knowledge of Persian literature, is able to quote freely from Herodotus and other Greek writers, drawing comparisons between the customs there recorded and those of the present day "—The Calcutta Review of January 1913, pp 97-98

The above and similar other words, uttered, while reviewing the first volume of my Anthropological Papers, by writers who can speak with some authority, have encouraged me to publish this second volume of some other papers on Anthropological subjects, read before the Authropological Society of Bombay since the year 1911, when the first volume was published. Of the 56 papers read by me before the Society, 30 have been published in the first volume, two, being of a more general interest, have been published separately, 20 more are published in this volume, and four remain to be published.

VI PREPACE

I repeat here what I have stated in my first volume and say that I beg to express my heartfelt thanks to all the members of the Society for the sympathy conress and co-operation they have so kindly extended to me in my work as its Honorary Secretary for nearly 17 years. Not only have I enjoyed pleasure at its incetings but have enjoyed it outside With what I may call the authropological training which I have received at its meetings, the sphere of my studies and of my sympathies has been enlarged. I cajos my morning walks whenever I happen to go out of Bombay on holidays or other wise better than before. The sight of peculiar customs man ners and things draws me and the spirit of liquisitiveness Imbibed in the Society makes me enjoy a talk with and the company of people of all classes. Even in Bombay familiar sights of the observation of familiar customs and manners do not bore me hat set my mind thinking

My learned friend Mr. Bomanji Ansserwanji Dhahhar Mahas kindly prepared for me the exhaustive index of this second volume as he did for the first one. I big to tender my heart felt thanks to him for this work.

IIV AND JAMSHEDJI MODI

# THE VADÂRIS OF THE VILLAGES ROUND THE DEOLALI CAMP IN THE NASIK DISTRICT.

PRESIDENT-LT COL K R KIRTIKAR, I M S (RETD)

(Read on 30th August 1911)

As desired by the Government of Bombay<sup>1</sup>, our Society had circulated, among district officers and others, who were thought to be likely to take an intelligent interst in the subject, the ethnographical questions framed by Mr (now Sir) Denzil C J Ibbertson, Mr John C Nesfield and Mr (now Sir) H N Risley (general series forming Part II to Mr Risley's glossary) In response to our circulatory letter, some of the district officers had kindly sent us communications on some of the castes in their district. Some of these communications were read before our Society and published in the Journal <sup>2</sup> Mr S M Edwardes, our ex-President, had, as the City Census Officer for the census of 1901, asked, at the instance, if I do not mistake, of Mr Enthoven, the then Provincial Census Commissioner and our present President, for all the above communications and they were all sent to him

<sup>&</sup>lt;sup>1</sup> The correspondence on this subject began with a Government letter dated 11th December 1891, and ended with their letter dated 31st August 1894.

<sup>&</sup>lt;sup>2</sup> Vol III No 8, p 471, Vol. IV, Nos 7 and 8, Vol V, Nos 1 and 2.

I had the pleasure of placing before the Society on two former occasions two papers based on the lines of the above ethnographical questions. They were the following —

- 1 The Dhankars and Dhavars of Mahabisehwar read on the 28th of November 1894 and published in the Journal Vol. III No. 8 of the Society
- 2 The Thakurs of Matheran read on 30th January 1901 and published in the Journal Vol V No 8

My papers on The Todas of the Nilgiris read on 24th February 1904 and published in the Journal Vol VII \n 1 and on The Kolis of Rassoin read on 25th July 1906 and published in the Journal, \lambda of VII \n 8 s were not the results of long inquiries based on the above ethnographical questions but were rather collections of notes collected doring short flying visits to Octacamund and Rassoin. Up paper this evening is the result of a regular month.

My proposed visit to Perna last April having fallen through owing to my audden illness at Kurrachee. I had to return to Bombay under some disappointment. I then sport a part of my leave at Matheran and Deolali to recover my health. At the latter place. I took pleasure in my morning will a to the adjoining villages. During my virits to these villages the Vadari tribe of which into a few eer in his thin draw my special attention. I propose giving a few particulars of the tribe in this paper.

What drow my attention to this trib, was the line the our storts of most of these villages of found a number of pigs just as we see in the villages of the Sal ette district near fainflay which are principally inhalated by the Franghess or the native Christians, who eat pork. The villages in the Naik Detroit of which Deolah forms a part are mostly inhabited by Hindia who do not eat pork. The Mahomedans also who firm a part of the population of the district do not cat pork. So the presence of these animals in this villages as in k me and led to inquiries, which pointed to the presence I me and their in the district of the Vallage who are the own softh.

I have collected my information during my visits to the following villages round about the Camp of Deolali —

- 1 દેવલાલી ગામ, The village of Deolah about two miles from the camp, on the road leading to Nasik
- 2 θε Id, a village near Deolah village and standing on this side of the river which separates these two villages
- 3 ભગુર Bhagur, a village situated about a mile from the camp, on this side of the Darna River
- 4 શેગવા Shegwa, about a mile from the Deolali camp and situated near Dhondi-âbâd, founded by Mr Sohrabji Kharshedji Dhondi of Bombay
- 5 વદનેર Vadner, on the Vâldevi (વાલદેવી) river, about two miles from the camp
- 6 মামার Saunsarı, about a mile from the camp, on the other side of the Railway line, crossed at the first crossing after the Deolali station near Dr Bapuji P Narielwala's Convalescent Home
- 7 ખેલવગાઓ Bellat-gaum, at the distance of about two miles and a half from the camp and on the other side of the Railway, crossed at the second crossing opposite Mr Batliwala's bungalow on the Nasik Road
- 8 No Cherry, on the bank of the Dârnâ, about three miles from the camp, on the other side of the Railway line, crossed at the third crossing from the Railway station. A pucca metalled road from the Nasik Road station-crossing, also leads to the village, near which the river is crossed by a ferry boat, driven by the current of the river when flooded and controlled by a bridged rope.
- 9 નાના Nânâ, about two miles from the camp on the other bank of the river Dârnâ, to be crossed at about a mile from the pumping station which pumps water from the river for the use of the camp

- 10 राज्या Shevga about three miles from the camp on the opposite side of the Darna River It can be approached from Nana
- 11 cut A Lavr about three miles from the camp on the opposite bank of the Darna River near the village of Bhagur A ferry boat runs between the two banks near Bhagur when the nyer is flooded.
- 12 -1[\*\*][\*\*][ Nad gaum about 9 miles from the camp near the Dârna river dam lately built in connection with the Godavery canal scheme. A walk of about two miles and a half on a pretty good road, from Asvali the station next to Deolali on the Bombay side leads one to this village and to the great dam which is worth seeing. I Near this village there was during the time of my visit a special camp of the Vadâris who had collected for the work over the dam.

As required by the framers of the above-ead set of questions, I note here the sources : c. the names of the parties from whom I principally collected my information.

- I haifi Malan son of any Bapu son of any Daapa aged about 50 who lives at Bhagur with his family and relations in a set of three huts just near the entrance to the village from the Deciali camp and on this side of the railway crossing He is the Vadari of Bhagur Shegwa Lavii and Dhondwalda At procent he has his pigs only at the first two villages, and net in the last two because as he says these villages are small and the people complain of the damage done to their crops by the mass.
- 2 Bhimaii son of Ravjeo son of Ittooba agod 40 living in the Vadari camp at the Darna dam near Nadgaum

Bullock corts can be had from the village by provious arrangement through the station master of Asvell. I note here my obligation to Rac Sabeb Narayan Vishnu Barre, Sub-Engineer in charge of the Dirad dam for the courtesy kindly displayed in abowing me the dam. This visit to the dam enabled ms to see the Yeddri camp there

- 3 Rakhmi, the wife of Shetiba, the head man of the above camp of Vadâris Shetiba was absent from the camp
- 4 Parbuttee, the wife of Shimâ (or Chuma as the people of the village of Saunsâri called him), who was absent from his house at Shevgâ Shimâ is the Vadâri of Nânâ, Shevgâ, Bellatgaum, Saunsâri and Shindi

Before I give my account of the tribe in the order of the ethnographical questions referred to above, I will note here, the relationship, if I may so use the word, that exists between the Vadarı of a particular village and the village itself Vadârı is the owner of a number of pigs, which he distributes in more than one adjoining village, of which he is said to be the special Vadari The pigs feed on the rubbish, or, as the villagers term it, the Hui mela (filth), thrown on the outskirts of the villages and thus do a good deal of the scavenger's work Thus, both parties are benefited The villagers are benefited from a health point of view, and the Vadaris are saved the expense of feeding the pigs They breed and eat the pigs and even sell them But the villagers say, that the benefit is rather more on the other side, ie, to the Vadaris, because, the pigs, not only feed on the filth of the village, but, at times make inroads upon their crops in the fields round about, and, at times, even upon some eatables, in their houses So, they claim some small service from the Vadâri, and it is this the Vadâri is bound to look to the state of the roads-if that word can be properly used in the case of the pathways of the villagesof the streets of the village, and of the roads leading from village to village Again, he is also bound to do the outside mâti work of the village temple, which is generally the Maroti temple, e, when any earthern patch work to the outside walls of the temples is to be done, he has to do it He has to do both these works, free of cost Thus when his pigs do the Health Department's work, he personally does the Public Works Department's work The Vadarı does other private work also, especially the mâte or earth-work of individual villagers, but in that case he is paid either in kind or in money. All the above work not being heavy one Vadâri is in charge of more than a village. He is spoken of as being a Vadâri of such and such villages. The particular Vadâri of the village only can do the above work. He only has that privilege and no other Vadâri can oncreach upon that privilege. When the Vadâri of a village dies his heir succeeds him. For example in the village of Vadari on the bank of the Vildevi river, the Vadâri in charge being dead his wife Rakhmi has her pigs there and acts as the Vadâri of the village. The above work is not their only work. After attending to the above work which requires their services occasionally they are at liberty to do other work, which is generally that of ordinary labourers.

In the case where a Vadin has no pigs graxing or feeding in a porticular village the villagors pay him in kind for his labour in connection with the public work of the village visthe reperation of the roads and of the temple wills

I now proceed to give an account of this tribe following the order of the ethnographical questions above referred to

1 The name of the caste is quit Vadâm 1

While collecting my notes at Declail, I had inquired from Declaii from my assistant, Mr F M. Pavrl, if our Society had received any paper on the Vadans in this series of monographs published by the Department of the Ethnographical Survey of Bombay conducted under the superin tendence of our President, Mr Enthoven, and was answered in the negative I then worked up my paper from my notes On my return to Bombay I inquired of our President if he knew of any monograph on the caste. After some inquiries, he wrote to me, that there was no mono graph on the Vadaris, but kindly sent me a monograph on a tribe called Od, Vadda, or Baklar perhaps suspecting that the Vadáris may be the same as Od, Vadda or Baldar On looking into the paper I found that the tribe was the same. I had thought of reading my paper at the last meeting but on receiving the above monograph, only a few d ye before the day of the meeting I postponed the reading until I went into the monograph I have done so subsequently and have found that though the menograph and my paper are both on the subject of the same tribe the particulars collected are in several respects, different 1 thought my paper may be taken as a supplement to the roomgraph and

- I fin a shalfe f eiter en time e fe erer
- The test which the both to be the bodies who proposed to the test to be the test.

A 1 st of effects in the the Councilla de flor mail

I had a still and the least of her law close or of the respection of the law close or of the respection of the law close or of the respective and are a selection of the law law and the law law and the law law and the law a

There is In a intermaring a setucing all there subdivisions is an, member of each subdivision many among themselves also, eq., a Mate Lagari can marry a woman of his own subdivision.

- 5. There is no prohibetion of intermeringe among the rub-divisions, breed upon everal status, prographical or local sention, and differences of religious beliefs or practices or differences or changes of occupation
- there from the district of Poona, and mostly from the villages of Siswad and Pimpri in that district. As told by Malari, the Vadari of Bliagur, their tradition is, that they all belonged to the Carnatic. This is borne out by the fact, that, though they all speak the Marathi language out of home with others, they speak at home the Telingu language which is the language,

may give materials to a future Superintendent of the survey, for a fuller monograph. I consulted our learned President at the last meeting, whether, under the circumstances, I could read the paper and he kindly advised me to do so. Hence this paper, which I beg to submit before the Society, as said above, as a supplement to the monograph

generally spoken in the Carnatio They have no knowledge of the approximate time of their emigration, as marked by the reign of any particular king They do not even know the name of our present Emperor

7 The habit of the caste is windering. They point to the Pooua district as their head-quarters. Their migrations are not periodical but are irregular. They move about in large numbers whereever some earth work or stone-work requires their services. For example the people of the Vedérickimp at the Dárni dam had mostly come from the Poons district ,where they all would return on the completion of the dam work, if not required elsewhere. The Nasik Gazetteer (Vol. XVI p. 64) which speaks of them in a few lines says that they are believed to have come from Pandharpur Sholapur Sotars and Jamkhandi. I did not hear the names of these districts in the villages round Deoleli.

The habit of the particular Vadáns attached, as and above to particular villages can be said to be half-settled and half migratory—half-settled, in so far that they cannot go far away from the villages which are in their charge as Vadár and half migratory in so far that they have to go from village to village to look occasionally after their pigs and to attend to the reperation of the public roads and temples of the villages.

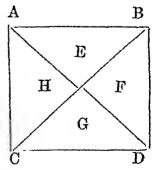

The shape of their dwellings is like that of the rhous or small tents used in camps as cook rooms or as servants quarters. Some of them are not as large as rhous. The materials of these dwellings consist of a kind of rood and group of which some mattings for floors of rooms are made. These dwellings or liuta are easily removeable. The sides or walls consist of a tied frame-work. So when the hit has to be removed one has to remove the frame-work sides or walls. Each family has one or more huts of that kind. Some of the farmers of the Nank District also have their temporary huts of that shape but they are made up of ships of thin bamboos intervorces with hay are made for about Rs 0 to 8.

The Vadâris generally have dogs, some of them very ferocious to guard their huts. They have also donkeys to carry loads of earth and stone

Some Vadåris, for example the Vadåri of Bhagur, have their dwellings of a more pucci kind in a particular village, as their head-quarters

- 8 They do not admit outsiders into their casto.
- Infant marriages are permitted. The fathers of girls are paid, at times sums, up to Rs 100. If the husband is poor, he does not pay at once, but marries on certain conditions. Ho lives with his wife at his father-in-law's and works for him. He pays to him, whatever he earns until he pays off the whole of the stipulated sum. On paying off that sum, he is at liberty to go with his wife and children to his parents' house or to put up in a separate house. Soxual heense before marriage is not tolerated.
- 10 Polygamy is permitted but not polyandry Shimâ, the Vadâri of Shevga, Nânâ, Bellat-ganm, etc., has two wives He has provided a separate but for both and has children by both wives
- 11 The marriage ceremony is performed by a headman of the caste, whom they call mukhtûn મુખ્તાર At times, the Hindu Brahmin sees the murat or the auspicious occasion for the marriage

They form a square with grains of rice A (vide adjoining figure) Two closs lines are drawn in the square also with grains of rice. At the four corners, A B, C and D of the square are placed four lolâs or pots, which contain betol-leaves, betel-nuts, turmeric, etc. The number of betel-leaves in each pot is 5. In three of the sections, E, E, and H of the square, formed by

tions, E,F and H of the square, formed by the cross lines of grain, two small heaps of grain are placed. In the 4th section, G, three heaps of grain are formed. The marrying couple

generally spoken in the Carnatio They have no knowledge of the approximate time of their emigration, as marked by the reign of any particular king. They do not even know the name of our present Emperor

7 The habit of the caste is wandering. They point to the Poona district as their head-quorters. Their migrations ore not periodical but are irregular. They move about in large numbers whereever some earth work or stone-work requires their services. For example, the people of the Vadāri camp at the Dārrā dam had mostly come from the Poona district, where they all would return on the completion of the dam work if not required observed. The Nasik Gazetter (Vol. XVI. p. 64), which speaks of them in a few lines says that they are believed to have come from Pandharpur Sholapur Satara and Jamkhandi. I did not hear the names of these districts in the villages round Doolali.

The habit of the particular Vedâris, attached, as said obove to particular villages can be said to be half-settled and half migratory—half-settled in so far that they cannot go far away from the villages which are in their charge as Vadari and half migratory, in so far thet they have to go from village to village to lool occasionally after their pigs and to ottend to the reparation of the public reads and temples of the villages.

The shape of their dwellings is like that of the ruchs or small tents used in camps as cook rooms or as servants quarters. Some of them are not as large as ruchs. The materials of these dwellings consist of a kind of reed and grass of which some mattings for floors of rooms are made. These dwellings or huts are easily removeable. The sides or walls consist of a tied frame-work. So when the but has to be removed, one has to remove the frame-work sides or walls. Each family has one or more buts of that kind. Some of the farmers of the Nasik District also have their temporary buts of that shape but they are under up of slips of thin lamboos interwoven with hay A comfortable removable but of that kind can be purchased ready made for about Rs. 6468.

The Vadârıs generally have dogs, some of them very ferocious to guard their huts They have also donkeys to carry loads of earth and stone

Some Vadâris, for example the Vadâri of Bhagur, have their dwellings of a more *pucca* kind in a particular village, as their head-quarters

- 8 They do not admit outsiders into their caste
- 9 Infant marriages are permitted. The fathers of girls are paid, at times, sums, up to Rs 100. If the husband is poor, he does not pay at once, but marries on certain conditions. He lives with his wife at his father-in-law's and works for him. He pays to him, whatever he earns until he pays off the whole of the stipulated sum. On paying off that sum, he is at liberty to go with his wife and children to his parents' house or to put up in a separate house. Sexual license before marriage is not tolerated.
- 10 Polygamy is permitted but not polyandry Shimâ, the Vadâri of Shevga, Nânâ, Bellat-gaum, etc, has two wives He has provided a separate hut for both and has children by both wives
- 11 The marriage ceremony is performed by a headman of the caste, whom they call mulhtar your? At times, the Hindu Brahimin sees the murat or the auspicious occasion for the marriage

They form a square with grains of rice A (wide adjoining figure) Two cross lines are drawn in the square also with grains of rice At the four corners, A B, C and D of the square are placed four lotâs or pots, which contain betel-leaves, betel-nuts, tuimeric, etc The number of betel-leaves in each pot is 5 In three of the sec-

A B

tions, E,F and H of the square, formed by the cross lines of grain, two small heaps of grain are placed. In the 4th section, G, three heaps of grain are formed. The marrying couple

sit in the middle of the square—then the headman or mulhidratives the name of Bhagyan s.e. God, and of four elders of the caste and asks for their kalyan scale; see blessings over the couple. Those present at the coremony sprinkle rice over the couple asking the blessings of Prabhu (God). Then the couple turn five times round a small statuette of their god Sometimes the marrying couple turns several times round the Hindu temple of Maroti in the village. At times the marriago ceremony is simpler than the above. According to the statement of Parbatti, the wife of the above-named Vadâri, at times the marriage ceremony is simply this. They bury in the ground the thock piece of wood with which they pound noe and then the husband, holding a hand of his wife goes round it 5 times. That finishes the ceremony

- 12 Widow marriage called Riegs (Mohtur) or 7516 Nekah is permitted, but not with a hrother of a deceased husband It requires no coremony other than the application of peckee (red pigment) to the marrying couple
- 13 Divorce is permitted for adultery or for such other reasons. There is no particular form for it. Divorced wives may remarry
- 14 The property of a deceased person is divided by the Panch of the caste equally among the sons but not among the daughters.
- They generally wership their own tribal or easte gods. The Vadárs of the camp at the Darna dam belonged to two sub-divinions. The Máti Vadari and the Gári Vadári. They had two tribal gods ( 🍇 1) lenkubå and 1219 Narsubå. They had these gods in their own huts. I saw the following paraphernalia of their god Narsubå in a hut of one of the Vadaria there.
  - 1 A metallic pot (53 Hell)
  - 2 A thin metallic rod (सत्ती) with a canopy ( धुत्र ) over it The canopy was known as ( आव्हान्त्र) Åb-dagn

- 3 A metalle chain in the above pot. The chain had a crown-like coin This coin represented their god Narsubâ
- of the Mahrâthi people, among whom they live They pay homage to Mâroti and Khandobâ, especially to the former, because all the villages round Deolah have their Mâroti temples, and it is a part of the duty of the Vadâris of these villages to look to the reparation of the village temple wall. Tuesdays and Fridays are sacred for their worship of Khandobâ, and Saturdays and Sundays, for that of their own Marâi or Mahaluxmee Women are permitted to worship after a bath

The Vadarı of Bhagur had his tribal gods in an inner dark room of his hut He had a small vertical box there, which contained a small statuette of what he called Mahaluxmee, the other name of which was ( 4318) Marâi There was a similar box standing by its side, containing a similar statuette The first box was his own The second was that of his father A Vadârı, if he can afford to keep and attend to such tribal gods at home, does so A son, on separating from his father and putting up a new house, does so Malari, the Vadari of Bhagur, of whom I speak, had set up in his own house a cage-like box for the worship of his god Marâi oi Mahaluxmee When his father died, he thought it a point of honour to bring up his father's box of the Marái or Mahaluxmee idol also to his own house now, he attends to both the gods and makes the necessary worship ( પુજા પાત્રી) of both A flag is hoisted outside his house in honour of his god

- 17 They do not employ Brahmins for religious or ceremonial purposes, except this, that, at times, they consult them to know the days that are auspicious for marriages and to know whether the couple has râç ( રાધા) ie, good luck to live happily
- 18 They bury their dead with their heads pointing to the north and feet to the south

- 19 They have no Shradh ceremony in honour of the dead but they perform some pusia pairs ceremony on the day of the death, and on the 13th day and then do what they call 3td utited (lit to give bread) i.e. feed the caste-men. That finishes the ceremony for the dead. They believe that for 13 days, the soul of the deceased moves about within the precincts of this world in the form of a bird like the crow or the cook or of an animal. Then it passes away to the next world.
- 20 They are not named after any animal or plant. They are named Vadán perhaps from their migratory habit of moving about. If so the word Vadán comes from the Sanskrit root vah (vad), to go to move about, to warder). The subdivisions are named, as said above from the various kinds of their work.
- 21 They do not know anything of the original occupation of their forefathers. They do all petty works as labourers. They are not agriculturists themselves at least in the district round about Decials.
- 22 They hold no lands and are day labourers. They are paid in money on excavation, reclamation or huilding works but in their works as village Vadaris, they are generally paid in kind, i.e., in corn every year
  - 23 Some of them catch rats and est them.
- 24 A part of the occupation of the village Vadâris, who are generally the mâti Vadâris is to broad pigs. As the eating of pigs is generally disliked, some of them in order to show that they are above the average and of a higher order say the they do not eat pork or pig flesh. For example, the Vadâris at the Dâris dam said that they were all gart Vadâris and as such as a body did not breed or eat pigs. They further said, that they would not eat or intermarry with the said. Vadâris who as a rule ato pork. But this seems to be a recent step or a commencement in the direction of that step to raise themselves in estimation among the people round about them. The mâti Vadâris of Bhagur and other villages near Declair.

said that the above  $g\hat{a}i$ -Vadâris said a falsehood, if they gave the above version of their food, etc

- 25 They do not habitually prostitute their married or unmarried women
- 26. They out all articles of food, except beef, or as they called it the flesh of mother-cow and the flesh of monkeys. The special article of food, the abstaining from which they thought would raise them, was, as said above, the pork, which the gâri-Vadâris now seem to leave off eating
- 27 They will not eat the palli (cooked food) from the hands of the Mâhârs and Dheds, but would eat that from the hands of the Mahrathis and other high-caste Hindus. They do not eat that from Mahomedans. They would have a non-smoked bidi from others, but not one that is partly smoked. The same is the ease with wine, which they would not drink from a cup from which one of another easte has drunk partly. Such wine they speak of as being (Mil) jutha ie, false or tainted.

The following are a few lines of their cradle song I heard at Shevgâ.

દાયમા કુયમા કુયમા દાયમા નાના રામા દાદામા પદાખા પંદાખા My baby! Come here, go there Go there, come here My boy! Why do you not sleep ? Go to sleep, go to sleep

The following is the purport of a cradle song in their Telugu language, which I heard at the Vadâri camp, at the Dârnâ dam.

My child! Your father has gone to work He will return soon, so, kindly go to sleep early. I have much work to do.

- 19 They have no Shradh ceremony in honour of the dead but they perform some punja pdirs ceremony on the day of the death and on the 13th day and then do, what they call kiel with the ceremony for the dead. They believe that for 13 days the soul of the deceased moves about within the precincts of this world in the form of a bird like the crow or the cook or of an animal. Then it peaces sway to the next world.
- 20 They are not named after any animal or plant. They are named Vadân perhaps from their migratory habit of moving about. If so the word Vadân comes from the Sanskrit root cah (vad), to go to move about, to wander). The aubdivisions are named, as said above from the various kinds of their work.
- 21 They do not know anything of the original occupation of their forefathers. They do all potty works as labourers They are not agnoulturists themselves, at least in the district round about Deolali.
- 22 They hold no lands and are day labourers. They are paid in money on excavation reclamation, or huilding works but in their works as village Vadáris they are generally paid in kind, i.e., in corn every year.
  - 23 Some of them catch rate and eat them
- 24. A part of the occupation of the village Vadaria who are generally the máti Vadaria is to breed pags. As the enting of pags is generally disliked, some of them in order to show that they are above the average and of a higher order say that they do not cat perk or pag firsh. For example, the Vadaria at the Darna dam said, that they were all gari Vadaria and as such as a body did not breed or eat pags. They further said that they would not eat or intermarry with the máti. Vadaria who as a rule ate pork. But this seems to be a recent step or a commencement in the direction of that step to raise themselves in estimation among the people round about them. The máti Vadaria of Bhagur and other villages near Deciality.

said that the above gari-Vadāris said a falsehood, if they gave the above version of their food, etc

- 25 They do not habitually prostitute their married or unmarried women
- 26. They eat all articles of food, except beef, or as they called it, the flesh of mother-cow and the flesh of monkeys. The special article of food, the abstaining from which they thought would raise them, was, as said above, the pork, which the gâri-Vadâris now seem to leave off eating
- 27 They will not eat the pakki (cooked food) from the hands of the Mâhârs and Dheds, but would eat that from the hands of the Mahrathis and other high-caste Hindus. They do not eat that from Mahomedans. They would have a non-smoked bidi from others, but not one that is partly smoked. The same is the case with wine, which they would not drink from a cup from which one of another caste has drunk partly. Such wine they speak of as being ( as jutha i e, false or tainted.)

The following are a few lines of their cradle song I heard at Shevgâ

દાયમા કુયમા કુયમા દાયમા નાના રામા દાદામા પદાખા પંદાખા My baby! Come here, go there. Go there, come here My boy! Why do you not sleep? Go to sleep, go to sleep

The following is the purport of a cradle song in their Telugu language, which I heard at the Vadari camp, at the Darna dam.

My child! Your father has gone to work He will return soon, so, kindly go to sleep early. I have much work to do.

Your father on return, will beat me if I will not do that work. Therefore my child, go to sleep go to sleep ( 45|12|1 45|41)1

# MB OTTO ROTHFELD'S REMARKS ON THE PAPER

Mr Otto Rothfeld LOS who presided at the meeting said the Society was obliged to the Hon. Secretary for a very exact and scientific paper With all deference however he ventured to doubt the possibility of a Sanskrit derivation of the name Vadarı or Vadda. He had listened, with great interest (as they all had) to the analysis of the place of the pig as an economic factor in a Deccan village Previously he had considered the pig as a factor of economic importance in Ireland only Mr Modi had, however stopped at the economic pig and had not gone on to discuss the succulent redent. Now Mr Rothfeld's own connection with Vaddas depended upon rats. In 1902-03 there had been the famous rat-famme in Gujarat Mr Cadell then Collector of the Panch Mahala, imported two Vadda families to show the villagers, how to kill the rate that were destroying their grops The operations of the Vaddas were most interesting Observation showed that they were able with almost exact accuracy to tell on inspecting a hole how many rate there were within it, or when the hole had been vacated. At the most they made a mistake of a bahy rat or two. Then they knelt beside the hole and by rubbing the rail of their thumb and second finger together made a slight noise which appeared to attract the rats. As they made the sound the rats marched out quietly in single file and each one as it left the hole was nipped by the Vadda a left fingers and tossed aside with a broken neck. The closing scene was a dainty rat-stew. Mr Rothfeld

After the Paper was read, while going over the old Volume of the Journal, to propers A Short History of the Society for the Silver Jubiles Volume my attention has been drawn to Eugographical Notes on the same tribe from the Collector of Sholapur read before the Society at its meeting of 25th April 1900, and published in the Journal of the Society Vol. Y No. 6 pp 216-279

only regretted that, at this stage, the spirit of scientific experiment had abandoned him and he had not partaken of rat-stew. Mr Rothfeld was of opinion that there was no connection of race between the Odhs of Gujaiat and the Vaddas of the South, and considered that this was proved by the prohibition of widows marrying their husband's brother among the Southern Vaddas, while in Gujarat the Levirate was the rule. He imagined that the Vaddas were an aboriginal Dravidian caste of the South, like most of the Shudra castes in Madras. He suggested, that the origin of the cast-system in India, as it is now known, may most probably be traced to that Dravidian race, as caste is found also in Polynesia, where the inhabitants are closely connected by race. And he was of opinion that the origin of most castes may more reasonably be traced to the Dravidian race than to Manu's famous abstraction from reality of the four castes

#### A FEW STORIES OF WITCHCRAFT, MAGIC, &c, TOLD BY NICCOLAO MANUCCI IN HIS "STORIA DO MOGOR" OR MOGUL INDIA (1653-1708)

President-Lit -Col. K. R. Kirtikar, I.M.S. (Retd.) (Read on 28th February 1912.)

The author of The Folk tales of Hindustan "1 very properly says that We in India have left even the collection of folk tales to be done by foreigners for the most part considering these stories to be unworthy of the attention of so metaphysical a race as ourselves. But we must if we want to survive, take our place by the side of the progressive races of the world in all departments of scientific study and research

It is one of these foreignars referred to above who has suggested to me the subject of my paper. It is the Venetian adventurer Niccolae Manucci who had come to India at the age of fourteen. His well known. Storia. Do Mogor. 1c.

The Story of the Moguls, has been lately translated by Mr. William Irvine under the title of Storia. Do Mogor or Vegul India and has been published in four volumes as one of the publications of the Indian Texts. Series under a scheme inaugurated by the Royal Asiatic Scorety at the instance of its then Scoretary Mr. T. W. Rhys Davids. The story of the discovery of the original manuscript of Manucci is an interesting remance.

Mannen's Stona Do Mogor is very interesting from several points of view but while reading it I have noted a few facts from the folklore point of view

Mr Gomme who defines the Science of Folklore as the science which treats of the survivals of archaic beliefs and

The Folk tales of Hindustan" by Shaikh Chilli Introduction, p 2

customs in modern ages," divides the materials of this science into four Parts 1

- I Traditional Narratives
- II Traditional Customs.
- III Superstitions and Beliefs
- IV Folk-speech

He subdivides the four divisions as follows -

## I-Traditional Narratives, into

- 1 Folk-tales
- 2 Hero-tales
- 3 Ballads and Songs
- 4 Place Legends

### II-Traditional Customs, into

- 1 Local Customs
- 2 Festival Customs
- 3 Ceremonial Customs
- 4 Games

## III-Superstitions and Beliefs, into

- 1 Witchcraft
- 2 Astrology
- 3 Superstitious Practices and Fancies

# IV-Folk-speech, into

- 1 Popular Sayings
- 2 Popular Nomenclature
- 3 Proverbs
- 4 Jingle Rhymes and Riddles

My paper this day, refers to the first sub-division of the third of the above-mentioned divisions of the materials of the science of folk-lore. It does not exhaust the subject. It does not give all the stories of witchcraft referred to by Manucci, but gives only a few typical stories found here and there in Mr Irvine a translation of Manuccis work. Manuccia work shows that some of the Europeans who came to India in those times about 200 years ago believed in the stories of witchcraft etc. in the same way as the natives of the country. Again most of the stories remind us of aimilar beliefs prevalent even now in India.

I remember having heard, when a boy many stories of the witches ( 515 Q ). The worst sort of the witches was one that had her belly turned on her back. She carried a sagdi (a kind of fire-vase) on her head. When also mteuded to frighten or injure anybody what she did was this she turned round, and let the victim see her belly torn open with all its distorted bowels. The very sight made the man fall sick and he died of a lingering illness.

(I) Manuoci was one day sent by Rajah Jai Singh a great officer of Aurangazeb as an ouvey to three rapals to ask them to give their word not to take the side of Shivaji nor to allow him to pass through their territories and to send one of their sons as a hostage or security for this promise. When in the territories of the third raids the Rajah of Chettia in the Nasik District he came across what he calls cases of sorcery He says "Here two things happened to me that I wish to recount so that inquiring persons may learn that these people are much given to sorcery I had a haudsome horse that Rajah Jan Singh had given me The Rajah of Chottia (Chiutia) took n fancy to this horse and requested me to sell it to him he would pay me one thousand rupees. I was not willing but when it was time for my departure the horse had lost the use of its legs and was unable to move I waited for eight days without any good when the rajah seut me word that though the horse was damag ed he would still give me one thousand rupees. In a rare I started from the place telling my people that if within twenty four hours the horse could not move to cut his throat and bring the hide to me Finding me su resolute, the raish sent me one

thousand two hundred rupees, beseeching me not to order the horse's throat to be cut, but to content myself with this present, and he would keep the horse in remembrance of me. I contented myself with taking the twelve hundred rupees, knowing quite well that if I did not, I should lose both horse and rupees" (Vol II, pp. 133-134)

This reminds one of a miracle, attributed to Zoronstei, in later Pahlavi and Persian books. The Zarthusht-nameh<sup>1</sup> refers to it. According to this book, a favourite horse of King Gushtasp had lost the power of the use of his feet. It was thought to be the work of a magician. Zoronster is said to have cured the horse of its disability <sup>1</sup>. As Dr. West very proporly says, this Persian version of the Zarathusht-nameh is "a highly embellished paraphrase" <sup>2</sup> of an allusion to the story of a horse in the Dinkard (Bk VII, chap IV, 66) which runs thus "His (Zoronster's) uttering on the horse-course (aspânvar) of Vishtasp a reminder of the power and triumph of Aûharmazd over himself as he invited Vishtasp to the religion of Aûharmazd."

(2) Manucci thus describes the second story of witcheraft '
"One of my servants, passing through a field of radishes, stretched out his hand to pluck one out of the ground, when his hand adhered in such a fashion to the radish that he could not take it away. It was necessary to find the owner of the field to get him liberated. This was done, and after taking something as a bribe and giving him a beating, the owner recited some words and the man was freed." (VI II, p. 134)

<sup>ા</sup> Vide Eastwick's translation of the Zarathusht-nameh, in "The Parsi Religion," by Dr Wilson. Appendix, pp 504-6, Vide Dastur Dr Peshotan Beharami Sanjana's વે તમાર સાદેવના અરોદ જરોદાવના જનારાનો ખદેવાલ' pp 128-134, Vide' Lo Livre de Zoroastre de Zardust i-Behram Ben Pajdu by Frederich Rosenburg Vide "Zoroastre Essai sur la, Philosophie Religieuse de la Perse, par Joachim Menant, Première Partie, p 45

S B. E. Vol. XLVII, Introduction, pp XXII.

<sup>3</sup> Ibid pp. 64-65

We still hear stories of the above kind. Manucci then proceeds to say I could never sufficiently state to what an extent the Hindus and the Mahemedans in India are in the habit of practising witcheraft. I quite well know that if I were to recount that they can even make a cock crow in the belly of the man who stole and ate it no credit would be given to me Nevertheless the truth is that many a time I heard the crowing in different cases and of such instances I was told over and over again. (Vol II p 134)

This story referred to by Manucoi is illustrated in a Gujarati slang saying બસ્યા વારા પેઠમાં બાલાવશે se. Boy! Ho will make it speak in your belly

(3) Manucci thus speaks of spells used by women to con trol their lovers. As for the spells practised by the women to bring young men under their control, they are infinite. Of such a nature are they that any such youth becomes mad nor is he given any respite to think of anything else. This subject I postpone to the Third Part of my History (III 248 205). Let this serve as a warning to our Europeans who intend to travel in India so that they may not allow their liberty to be taken from them for afterwards they will weep over their unhappy irremediable state. It happens often to one so bound by spells that after his lady love has died be cannot endure the approach of any other woman remaining over overcome by servew for the defunct. (Vol. II. pp. 134-135.)

We still hear of love-charms Superstitious women visit the so-called charmers for love charms.

(4) Manueci describes several other stories of magic in the third volume of his book. Ho sava. There are to be seen commonly in this country a want of the fear of God and of love to one s neighbour. I will relate here some cases which happened

For some old Persian arrang Le. charms or amulets, which can be classed under the head of love-charms, vide Parend T xts by Ervad L. K. Antia, pp. 186-187

in my sight of a diabolic nature. It is a practice very common among the Hindus and others, which does not fail also to lay hold of the Christians living in this country, who from want of true faith allow themselves to be persuaded into such-like errors

"A woman wished to become with child, and not succeeding with drugs, had recourse to a magician. His orders were that at midnight she should go and stand below a large forest tree which in India is called badd (bad, bar)." It produces a small red fruit. Here she was to perform the sacrifice as to which he had instructed her. She then became pregnant, and the tree referred to became sterile, and never yielded fruit so long as it lived." (Vol. III, p. 200.)

The so-called magical arts and charms are even now resorted to in India by women desirous of becoming mothers

- (5) Manucci gives another story of a different kind, of a woman desiring to have a child
- "In Bassahim (Bassein), a town of the Portuguese, there was a well-born woman—I will not mention her name—who wished to have a son to whom to leave her wealth. Secretly she had recourse to a magician, who by diabolic arts made it so appear that she was really pregnant, with all the signs that women have who are about to bring forth. When the time came, she was seized with pains, and several ladies came to assist, and she brought forth a tray full of sand, thereupon the delivery was complete. She lost all the great expenses she had gone to in preparing a feast for the occasion." (Vol III, p. 200)
- (6) The following story seems to show that even Christian friars were not free from beliefs in magical influences

'There was another case in Sao Thome about the same time A young friar had a woman-servant who cooked for

<sup>&</sup>lt;sup>1</sup> The Ficus Indica, or Indian fig-tree

him This woman threw such a spell over him that he could not exist without her for one moment. Anyone who went to visit the friar was an anioyance he sent them away as soon as possible and the few words he uttered would all be in praise of the serving woman. This friar fell ill of diarrhea, and was already almost at the point of deeth. In place of fixing his mind on God to secure salvation for his soul his whole concern was for the servant. At this time there arrived some friars from Goa and seeing him thus forsaken, know that he was bewitched. They seried the negro woman and hy force of torture made her relieve the friar of the spell she had thrown over him. After this happened he could not bear to see her or hear her name. It did not take long to cure him of his disease (the diarrhea).

(7) The following story is intended to show that if one is over ourious to peop in to the magical practices of others, he himself becomes the victim.

I will tell you another instance There was a Portuguese called Thome Borges de Villalobo an inhabitant of Sao Thome To recover after an illness he moved with his family to the foot of the four hills, which are three leagues from Sao Thome After some days had passed he felt relieved of his illness. But one night failing to get to sleep he went out to walk about the town by moonlight. Hearing in a house the sound of dancing and the tankling of bells, lus currouty led him to look through a poon-hole in the door There he saw two small boys well clothed, with bells on their feet wearing jewels and helding bows and arrows in their hands Opposite them was a magician scated on the floor holding a rod with which he struck the ground. To the sound of these strokes the children danced from time to time the magician uttered a cry and by reason of the gyrations made by the boys in dancing their eyes became flaming coals of fire their faces heavy and fearful to behold When this condition arrived they swooned and fell to the ground as if dead.

"The man's wife, awaking, saw the door open and her husband absent from the 100m. She went to look for him, and found him lying senseless at the magician's door. Hastening home, she brought her brothers and servants, and in dead silence they removed him to his house. There they began to lamont The lady who owned the house, hearing the weeping, came to them Sho was told what had happened to the husband, found lying in front of such-and-such a door. The old lady showed amazement, so that all present were more disturbed than before Upon scoing this the old lady consoled them, saying that she knew a cure Leaving home, she had recourse to the magician, who appeared in about an hour. Entering the house he said there had been too great temerity in seeking to see things which did not concorn one. All the relations entreated him to tell them some cure He gave the man certain fumigations, and placed medicine upon his eyes. After one hour had passed the patient began to move, and when morning came he was able to tell his story, as I have above recounted it. After that he went back to Sao Thome At the present time the widow of that Portuguese, being now seventy years of age, lives in my house, and the poverty in which she was left has forced her to do this " (Vol III, pp 201-202).

(8) The following story is of the kind which I remember having heard in my boyhood, wherein a Parsee was believed to possess the power of producing various fruits and sweets from a magical pot before him

"In the days when I was at Agrah I went to pay my respects to the brother of Shāistah Khan, who was called Faracfal (Falak-fāl), which means 'The Diviner' He was a very ugly man, and never appeared at Court for fear the people would loke at his odd physiognomy. This gentleman had a magician who gave him much information about what was going on. In my presence the magician raised his head and voice, saying that apples, pears, peaches, and several other fruits would fall. Accordingly, in the sight of all there present, they began at once

to fall. This was a thing to be remarked on, for at that season there were no such fruits in that country. He offered me some to eat but I declined to take them knowing them to be a product of magic so I thanked him for his kindness. This thing he could do whenever he liked. (Vol. III, pp. 202-203)

(0) The following story of Joeo Coelho illustrates belief in a medley of various kinds of megical arts

As it happened there came to Saū Thome on the loss of Malacca a widow woman with two unmarried daughters, and took up her abode in the street called Galeraa. This woman was poor and without protectors but of a noble family of good behaviour respected and of a retired life. In the same town dwelt a youth called Joso Coetho who was very rich. He did not know how much he had, and at that time did not count his money hit measured it by bushels as if it were grain. Relying upon his wealth and seeing that the above woman was poor he sent people to intrigue with the elder daughter asking her to become his mustress. This insulting message she imparted to her mother and it caused great indignation in the family

The widow had a servant girl of Rujava race who noticed the anger there was in the household and made bold to ask her mistress the cause of so much indignation. They told her what was going on Thereupon the Rujava woman asked leave from her mistress to live out of the house for some days till she could plan a remedy for such impertuence. The widow who was aggroved by the young man a overture willingly gave leave of absence to the servant girl

The reader should know that these Rajava people are for the most part magnetians and have a compact with the devil After five days had passed the servant girl returned to the house of her mistress with three others of the same race. She consoled the lady saying that in a few days she would secure a remody and would obtain satisfaction of her device she asked for a separate room for these others to live in into which no one must enter. The mistress consented. After three days they subbed a medicine on the eyes of the gul that the youth was in pursuit of, and directed her that when he was passing she should take post at the window.

Not many hours had elapsed when the youth, as was his precise every day, passed as anticipated in sight of the window to show himself off. The girl appeared at once, and then withdrew. When Joao Coelho saw his beloved, in place of going on his way, he came forthwith straight to the door of the widow, and began to knock, most humbly asking leave to enter and speak to the lady of the house. The Rajava servant advised them not to be in any humy to open. The youth, growing impatient, began to knock vigorously, and shouted for them to open. They answered him from the window by abuse, ordering him to go away. To such an insolant follow they would not open. On houring this answer he prostrated himself on the ground and said he had come for a proposal of marriage to her whom he had seen at the window.

They allowed him to enter. Then he sent off his servantman to fetch a priest to marry them. This was carried out at
once without delay, and the bride became lord over the husband and all his wealth, which turned out to be the cause of
his undoing. Thus does it frequently happen that money in
the hands of persons like this causes their perdition. After
the lapse of some time, she found that her husband loved her
passionately, and she had not the liberty of action that she wanted.
She asked the servant-girl to find a device by which she might
be able to live more according to her own fancy. The sorceress
made an oil with which they amounted the soles of the husband's
feet when asleep. He never more paid any heed to his wife,
and noticed nothing that went on in the house. Next she resorted again to the servant-woman for means of getting hold
of a young man for whom she longed

"The cuming sorceless by her arts fulfilled the desire of her mistress, and the youth came and went when she so required The younger sister seeing the delights her sister enjoyed became desirous also of passing her days according to her pleasure. She informed the Rājava servant of her intention. As the magician was practised in curing such complaints, she made over to the young lady the youth that she affected and he too came and went like the other one.

The Rajava woman warned the two sisters never to take betal from the hands of their lovers for if they neted to the contrary never again would the joing men leave the house Paying no heed to the warning of the sorceress they took lettle from the hands of their lovers who never quitted the house again but ruled over their mistresses as they pleased. The older asser became enceunte. Her lover told her that when the procession of Corpus Christi; passed as it was to do the next day she must not go to the window to look out.

On the day of the procession many ladies came from differ ent parts of the town to the house of the aforenamed lady. When the procession was passing the lady visitors noticed the absence of the lady of the house. They songht for her and partly by force partly by entreaty dragged her to the window. On beholding the pyx of the most hely sacrament she fainted and fell getting a great wound on the head and thereby areas a great outery and disturbance.

The younger sister who was in a room apart hearing the noise came out hastily to see. As she was coming her lover appeared and gave her a blow which knocked out one of her oyes. Upon this the confusion and the uproar were redoubled. The people in the procession observing the disorder in the house ontored in numbers to accommodate matters. The three companions of the Rajava woman seeing succour entering the house disappeared at once in a hitle boat of dough made of fine flour which they had prepared for the purpose. Along with them went the two lovers and the two sisters were left wounded in the house. The Rajava woman wanting to make off like the others could not reach either the boat or the other furfitives. She

was tortured, and confessed that what has been told above was done by her diabolical aits. She was hanged and quartered. The elder sister brought forth a son, to whom she gave the same name as the father, and all the town called him 'Son of the Devil.'

'This family came to be in such a state that they went round asking for alms, and the face continued until the loss of the city. These (? their houses) were so badly haunted that no stranger could dwell there with safety to his progeny. It chanced that there came three strangers, and finding no place to shelter themselves, they took these houses, and hardly was it seven o'clock at night, when there came a dead man with chains on his legs, and walked found the foom where the said men were. On seeing this figure, they fled in great haste to the door, and came out tumbling over each other, and hurting their hands and feet. When the skeleton reached the window, it said, 'You were lucky to run away so quickly, if you had delayed at all, I should have had to take notice of your temerity'. Upon hearing this, they turned and ran until they were placed in safety.

"To these same houses there came to live a captain and his company of soldiers He was called Pê-da-patta (? Flat-foot) -a very valuant man, and where he planted his foot, there he Then at six o'clock in the evening of the first day they saw a soldier come from outside, and pass through the midst of the soldiery without making any salute He made his way to one of the rooms Again on the second night the same thing happened, on the third day they made ready to find out who the intruder was When he entered the house. they ran after him, their bared swords in their hands pursuing were fourteen men, who went into the room he had entered Within they measured swords, but the aforesaid man had vanished, and the fourteen men wounded each other, and all came forth in evil case Then next day, they gave up the house, and Joaô Coelho came to it and lived in peace" (Vol. III, pp. 203-206)

(10) The following story shows how hair and nails of the fingers are used as means to communicate magical influence —

In Madras I knew a Portuguese, of good position honoured and wealthy His name was José Pereira de Faria and he was married to Donna Maria de Souza. He was a great friend of mine and had great confidence in me he and all his family He came and estitled in Madras npon the loss of Nagapataé (Negapatam). His wife told me of what happened to her and her story was confirmed by many

One of her slave-girls was much favoured by her husband, This lady's maid wanted to kill her mistress by magic arts For this purpose she stole some money from her master and resorted to a young Hindû servant of the house to get him to take measures to put an end to her mistress s life. When the lady was dead, she would become head of the house and would reward him. The youth accepted the task (for such persons when there is anything to gain have neither religion nor conscience) He tried to do what the slave-girl wanted and not succeeding had recourse to a magician. This man directed him to bring some hair nail-chippings, and a piece of defiled oloth belonging to the lady The youth reported to the slave our and she sent what was required. When some days had passed, the youth made over to her a doll into the head of which had been thrust one pin the point of which reached nearly to the stomach, and another pin was stuck into the navel coming half way down the lees

She was told that at midnight she must go entirely naked into the middle of the house garden holding up in one hand the doll and in the other a piece of burning wood. Orders as to what she was to do were added. She was warned that while acting as above there would appear a black cat but she must not be afraid. The wretched woman did as instructed. Going to the centre of the courty and she set fire to the ends of the dolls foot and hands. At that moment there appeared to her

The younger sister seeing the delights her sister enjoyed became desirous also of passing her days according to her pleasure. She informed the Rijava servant of her intention. As the inagenan was practised in curing such complaints, she made over to the young lady the youth that she affected and he too came and would like the other one.

The Rajava women warned the two sisters nover to take betel from the hands of their lovers for if they acted to the centrary nover again would the young men leave the house Paying no head to the warning of the sorcers they took betel from the hands of their lovers who never quitted the house ogain but ruled over their mixtresses as they pleased. The close sister became onceinto. Her lover told her that when the procession of Corpus Christi passed as it was to do the next day she must not go to the window to look out.

On the day of the procession many ladies came from different parts of the town to the house of the aforenamed ledy. When the procession was passing the lady visitors noticed the absence of the lady of the house. They sought for her and partly by force partly by entreaty dragged her to the sindow. On beholding the pyx of the most hely sacrament she fainted and fell getting a great wound on the head and thereby arese a great outery and disturbance.

The younger sister who was in a room apart hearing the more came out hastily to see. In she was coming her lever appeared and gave her a blow which knocked out one of her eyes. Upon this the confusion and the uproar were redoubled. The people in the procession observing the disorder in the house entered in numbers to accommodate matters. The three companions of the Rajava woman seeing succour entering the house disappeared at once in a little boat of dough made of the flow thich they had prepared for the purpose. Mong with them went the two lovers, and the two success were left wounded in the house. The Rajava woman wanting to make off like the others could not reach either the boat or the other fugitives. She

was tortined, and confessed that what has been told above was done by her diaboheal arts. She was hanged and quartered. The elder sister brought forth a sou, to whom she gave the same name as the father, and all the town called him. Son of the Dovil.

This family came to be in such a state that they went round asking for alms, and the race continued until the loss of the city. These (i then houses) were so badly haunted that no stranger could dwell there with safety to his progeny. It chanced that there came three strangers, and finding no place to shelter themselves they took these houses, and hardly was it seven o'clock at night, when there came a dead man with chains on his legs, and walked round the room where the said men were. On seeing this figure, they fled in great haste to the door, and came out tumbling over each other, and hurting their hands and feet. When the skeleton reached the window, it said. You were likely to run away so quickly, if you had delayed at all, I should have had to take notice of your temerity. Upon hearing this, they turned and ran until they were placed in safety.

To these same houses there came to live a captain and his company of soldiers He was called Pê-da-patta (? Flat-foot) -a very valuant man, and where he planted his foot, there he stood fast. Then at six o clock in the evening of the first day they saw a soldier come from outside, and pass through the midst of the soldiery without making any salute his way to one of the rooms. Again on the second night the same thing happened, on the third day they made ready to find ont who the intruder was When he entered the house. they can after him, their based swords in their hands pursuing were fourteen men, who went into the room he had entered Within they measured swords, but the aforesaid man had vanished, and the fourteen men wounded each other, and all came forth in evil case. Then next day, they gave up the house, and Joaô Coelho came to it and lived in peace" (Vol. III, pp. 203-206).

the image had been ontirely pulled to pieces he throw it into a vessel of milk and after making his incantations he threw that vessel into the sea

At the expiration of twelve hours Donna Maria came back to her senses and lost her pams—but she was so weak that it took her three months to recover her strength. The magician fixed upon the slave-girl who had done the mischief and the negress on confeasing it was punished and bamshed for the rest of her life. The originator of the trouble was the master of the house who had given such authority to a slave in order to gratify his own desires in an illiest direction. The slave thus thought she could become lady of the home upon the death of the wife. I have seen some lesse their lives or run their families by the commission of such insults and discords in their own houses. (Vol. III. pp. 200-208)

Hair and nads are often spoken of as means for communicating magnet influences. In the Vendidad the amount Indians were enjoined to bury the nails. Even now Purses prests bury their nails. I have referred to this subject at some length in my paper before this secrety outsided. Two Iranian Incantations for burying hair and mails.

# THE WEDDING SAND IN KNUTSFORD (CHESHIRE, ENGLAND) AND THE WEDDING SAND ( રાક) IN INDIA.

President-LT-COL K R KIRTIKAR, IMS, (RETD)

(Read on 26th June 1912)

The subject of this paper has been suggested to me by a recent book by Mrs Ellis H Chadwick entitled "Mrs Gaskell, Haunts, Homes and Stories"

Mis (Elizabeth Cleghorn) Gaskell ( $n \ge 1$  Miss Stevenson) was a lady novelist of the last century (1810-1865). She lived in Knutsford in Cheshue. She had a brother, who was a sailor and who is said to have come to India, "where he somewhat mysterrously, and without any apparent motive, disappeared, and all further trace of him was lost". She was married to Rev William Gaskell in 1832, at Knutsford Church. The death of her only son at the infant age of 10 months, caused her great grief, and her husband, in order to enable her to forget the grief advised her to write for the public. This event in her life, led to make her a public writer.

The above-named book, which gives an account of her varied life, was published in 1910, on the occasion of the Centenary of her birth. Therein, the author, while describing her marriage ceremonies, thus speaks of a peculiar custom, prevalent at Knutsford in Cheshire, which reminds us of a similar custom in India greatly prevalent in the Bombay Presidency.

'There were great rejoicings in the village on the day of the wedding, and Miss Stevenson's neighbours and friends were proud of the bride, who had spent nearly all her life in their village, and they were glad that she was now only going sixteen miles away to the city of Manchester Describing the quaint

<sup>&</sup>lt;sup>1</sup> Encyclopaedia Britannica, Vol X., p 104

oustoms of Knutsford Mrs. Gaskell writes one is the custom on any occasion of rejoicing of strewing the ground before the houses of those who sympathise in the gladness with common red sand, and then taking a funnel filled with white sand and sprinkling a pattern of flowers upon the red ground. This is always done for a wedding, and often accompanied by some verse of rural composition The tradition about this oustom is that there was formerly a well-dressing in the town and on the annual celebration of this ceremony they strewed the flowers to the house of the latest married bride by degrees it became a common oustom to strew the houses of the bride and her friends but as flowers were not always to be procured they adopted this easy substitute. Some people chose to say that it originated in the old church being to far out of the town for the merry sound of bells to be heard on any joyful occasion so metead of an audible they put a visible sign 1

As related by the writer of Mrs. Caskell's biography the local historian of Knutsford thus referred to the custom in 1950 ---

Wedding-cake wedding gloves and wedding rings are laundar to the whole nation but wedding sand belongs presumently to knutsford slone. 2 He then thus described the oldest tradition respecting the sanding. The chapel of case which stood in the Lower Street had one small tinking bell and that out of repair probably cracked so that its tones parred on the joyous feelings of a wedding morning. The bells of the parochial chapel were too far off and on the occasion of a wedding the plan was introduced of announcing it to the neighbours and to the town generally by sweeping the street before the door of the bride's lather and by garmshing it with a sprinking of sand At first the sanding was confined to the bride's house but in process of time nunovations crept in and hir friends in the other houses partaking in the neighbourly joy partock also in

Mrs. Gashell, Haunts, &c. 1 y Mrs. E. H. Chadwick, pp. 180-87 \* Phid. p. 187

the observance, then houses too put on the bridal adornments, and, looking clean and bright, shared in the festivity of the day" 1

According to Mrs Chadwick, the writer of Mis Gaskell's biography, The Countryman's Ramble" thus describes the custom.

"Then the lads and the lasses then turn-dishes handling, Before all the doors for a wedding were standing, I ask'd Nan to wed, and she answered with ease, 'You may sand for my wedding, whenever you please'."

Mrs Chadwick thus speaks further on the subject of the custom —

"Flowers, too, are scattered and bound up into gailands on occasions of rejoicing, to show honour to some nobleman of the land or to receive a sovereign when he visits among his people For the same purposes, brown sand and white sand are employed, and when our late Queen, as Princess Victoria, and her mother, the Duchess of Kent, visited Knutsford on their way from Chester to Chatsworth, 'the universal adornment of the pavement and the streets occasioned great surprise and afforded much pleasure' George the Fourth, when a guest at Tabley Hall, is said to have been much amused with the sanding devices is another tradition in Knutsford about the origin of sanding, which dates still further back It is said that King Canute forded a neighbouring brook near Knutsford, and sat down to shake the sand out of his shoes While he was doing this, a bridal party passed by He shook the sand in front of them and wished them joy, and as many children as there were grains of sand Sanding is still kept up at Knutsford at the May-Day festivities, when the pavements are decorated with beautifully traced designs in red and white sand

<sup>&</sup>lt;sup>1</sup> Ibid pp. 187-88.

On the day fixed for the Coronation of King Edward the Seventh in June 1901 there was a sanding competition in Knutsford, and very many artistic designs were displayed on the roads. <sup>1</sup>

From this long description of the custom based on various authorities we gather the following points about the tradition of the origin of the custom

- 1 The origin of the custom of strewing the wedding-sand at the door of the bride s house is to be found in the coincidence of King Canute crossing the Knutsford brook and shaking the sand out of his shoes at the very time when a bridal party was passing.
- 2 The parochial church being far away from the village for the villagers to hear the Church bell on a wedding or other joyful occasion, they reserved to the plan of announcing the joyful ovent to the town by sweeping the street before the door of the hinde s father and by garmshing it with the sprinkling of sand.
- 3 The origin of the custom is found in the origin of the ceremony of well-dressing, on the annual celebration of which they strewed the flowers to the house of the latest married bride. By degrees it became a common custom to strew the houses of the bride and her friends but as flowers were not always to be precured they adopted this easy substitute.

What we gather from these traditions is this —The oustom began with some kind of flower-decoration—which began at a favourite well of the town or village and ended at the house of a lately wedded couple—The village well was always mear and dear to their heart and was therefore sacred in their eyes because it supplied them with drinking water—Not only the question of their health—but of their very life and death was connected with it—They therefore—showed their reverential

feelings towards it by flower-offerings, which took the shape of flower-decorations. A lately-wedded couple was the next important thing which concerned the villagers most. So, on their return from the annual ceremonial visit to the well, they first went to the house of the couple with their flower offerings, and decorated it. Thus, flower-decorations came to be associated with a marrying couple and their house. Flowers being not easily procurable at all seasons, a substitute was used. The use of sand as a substitute began in the time of King Canute, who, on entering into the town, shook the sand out of his shoes, and, at the same time blessed a marrying couple who happened to pass from there.

Now, this Cheshire custom reminds us of the Indian custom of sweeping the door fronts of houses on wedding and other joyful occasions and of strewing them with lime and other coloured powders

This custom is known among the Paisees as Als year Chowk puriâ, lit, to fill up the Chowk ie, the square before the house. It is a custom prevalent among the Hindus, and the Paisees have taken it from them. As in the Cheshire custom, the house fronts are swept clean and then strewed over with white calcium powder. Many Indian families, and among them Paisees also, observe this custom every day and strew the door front with the powder after sweeping it clean every morning and evening. On happy occasions like those of marriage, Naojote, (investiture with sacred shirt and thread), birthday and on grand holidays, that custom is especially observed.

The words "Chowk purvâ" suggest one or two ideas about the houses in Bombay Formerly many a house had its own Chowk or compound. It was this compound that was strewed (lit filled up) with the powder. In the case of houses that had no compounds the strewing had to be done on the threshold of the house. The principal powder that was used and is now used for the purpose is, as said above, the white powder of

calcium, known as \$1531 331 Powders of various other colours especially red also were used. The powder also has latterly been called \$15 by some

The original object of the oustom seems to be a kind of decor ation. Flower-decorations of a simple type assuming the form of a toran or an arch like string of flowers are common in Indian houses. The outtom in question also seems to be the remnant of a kind of decoration of the fronts of houses. Many an Indian lady takes great pleasure in decorating the front of her house by strowing these powders in various artistic ways. We had a beau tiful exhibition of this art from the hands of Hindu ladice in our Old Bombay Exhibition, held on the occasion of His Majorty a visit to India. I remember with pleasure many a pleasant morn ing when I was a boy of about seven or eight when I used to get un with my good mother early in the merning on Diwali Helidaya. During those holidays, she generally devoted two or three carly merning hours with a bright lamp burning before her to these decorations with powders of various colours. The designs of the decerations were a cradle a child's shirt ( weigh) a shigram with a horse a palangum etc. Such artistic decorations have now almost disappeared from among the Paraces The only relia of the oustom we now see-and there is hardly a Parace household where it is not seen oven now-is that of strowing the door fronts with white and red powders through holed tin boxes bearing some devices especially that of a fish.

The following lines in some of the Paracosongs show that the custom was as it were embedded in the social life of the people

In a \aojote song s.c. a song sung on the occasion of investing a Parsec child with the sacred shirt and thread we hear ---

ર્માતી સગ્યા ચાક મારી અગીઆરી પુરાકા માતી સરખા ચાક માટે દગ્યાજે પુરાક વસ્ત્રીઓ પરાયા આસરીએ પુરાક

Translation - Get the Again (i.e. the Fire temple where a part or the whole of the Naujote ecremony is performed), streaml

with the pearl-like powder. Get my door-front strewed with pearl-like powder. Get my down floor and the steps of my house strewed

The words, Aid arm ais, se, pearl-like powder-decoration, used in this song, may be simply a songster's exaggeration, or perhaps they suggest that very rich persons were believed to use, on rare occasions of joy, powdered pearl for the purpose This belief is seen in the Gujarati proverb and arrival Aid arrival Aid are to indicate that, if one is nich and is so inclined he may get his own private house strewed with powdered pearl, but on ordinary public occasions he must resort to the use of the common simple method

In the above account of the Cheshire custom, we read that, according to their tradition, the people resorted to the custom of strewing the front of the house with wedding sand, to announce the joyful event of the marriage to the town. The following lines in a Parsee song also show, that the Indian wedding sand or powder (215) was also taken as a sign or symbol to announce the happy occasion of marriage.

હમારા વેહા ભર્યા ઘર કેમ જાણીએ ? એમાસ્ત્રીએ માતીના ચાક, માદેવ માતીના ચાક

Translation — How are people to know that our houses have the occasion to celebrate a marriage? (By seeing) Powdered pearl decorations on the steps (of our houses) (By seeing) Powdered pearl decoration on the marquee (erected on marriage occasions)

The following lines also refer to a similar idea —

સહવેણા વેરાયા કેમ જાણીએવેરે ? એમાસરીએ માતીના ચાક, ખરકીએ માતીના ચાક.

Translation—How are we to know, that good (auspicious) words (of marriage songs) are uttered (in this house)? By the powdered pearl decoration on the house steps and on the down floor

The following kness show that the custom was not confined to weddings only but that it was extended to other joyful occasions

> વ્યાવું શકું વ્યાગાયું, બાઈ! છાંતાયું છતાયા રે વ્યાવું શકુ વ્યાગાયું, માઈ! ચાક પુગયા રે ત્યા ગેરીવ્યા સ્મારા રે

Translation — Madam I You have such a fine compound.

Get it be sprinkled with water Madam I You have such a fine compound. Get the front of the house decorated with powder Let Genás be played there

It is said that in some of the Gujarat villages the poor people use the grain husks (2,41) for their house front decorations.

Now the question is what is the origin of the Indian oustom? I have asked several persons about it but have not found a satisfactory roply. The various origins attributed to the Ches hire oustom of wedding sand suggest that in India also it was a kind of deceration. The deceration at first was that of flowers. These flower decerations latterly gave place side by side with themselves to this powder deceration.

I am told that among some Hindu families the following custom still provails. The ladies make these sand or powder decorations before the fronts of their houses and then place flowers on these decorations uttering the words of Sità and Râm. They do it on joyous occasions and on religious holidays. This oustom gives it a somewhat religious signification. Anyhow this custom wherein flowers are strowed, shows that the modern custom of strowing sand or powder is a remnant of a former custom of flower decoration and that it was considered as a religious oustom. Thus we see that beth the Indian custom and the English (Cheshire) on tom had at first the signification of a kind of flower decoration. The larrers have latterly been using in these decoration some words signifying the supplication of thora Mazda's felip.

tornt is a kind of play played with stake by Hindus on marry occasions, c pa fully during the D sub Holsley a.

I remember having seen, at the Paris Exhibition of 1899, in a side show, an European lady tracing intistic decorations on the ground with her lingers with some kind of powder—a process spoken of here as Chamtina Chowk (2481-112) i.e., strewing the ground with powder by means of the tips of the fingers. I do not know, whether the show exhibited the type of any custom of decoration prevalent in any part of France, or whether the lady had imported it from India or England. On comparing the two customs—the Cheshire and the Indian—we find the following points to be common

- I The original idea was that of some kind of flower decorations
- 2 The flower decoration extended to favourite wells. In Cheshine and in other parts of England, it was known as well-diessing. In Bombay and Gijarat, it is called (3417 418) 441441) Luvânê vâdi bharâvui, i e, to get a garden prepared for the well. This custom of well-diessing, has a good deal to do with the belief in well-spirits. Formerly there was a similar custom of adoining the marriage reportings, with flower decorations. The phrase, 4181 441441 which was used for a well-diessing, was also used for children.
- 3 The custom was not confined to weddings It had extended to other joyful occasions The late Queen Victoria's visit to Knutsford was an occasion for a display of this custom Here in India, the front of many an Indian house was strewed with the powder and decorated with flowers, on the occasion of the late visit of His Majesty and on the Durbar Day
- 4 The sand-strewing is accompanied by flower decorations on house fronts

## THE PERSIAN ORIGIN OF THE KURDS AND THE TAJIKS

President-Lt Col. k R Kirtikar LMS (Retd)

[Read on 31st July 1012]

The July to December Number (Vol XLI 1911) of the Journal of the Royal Anthropological Institute of Great Britain and Ireland contains a learned article from the pen of Dr. Fehr V. Luschan on The Early Inhabitants of Western Asia. I had the pleasure of visiting Constantinople in November 1889 and of noticing with great interest the variety of races of the men that passed through its streets and more especially at the Golden Horn. So I have read with great interest Dr. Luschan a article especially its preliminary para describing the variety of the races that one sees in Constantinople which from the beauty of its situation. I have ventured to call. The Queen of oftics. I The object of this paper is to submit a few observations on the Persian origin of two of the races—the hurds and the Tailka—referred to by Dr. Luschan.

#### THE KURDS

Of the twenty one different races of which Dr. Luschan speaks one is that of the kurds. He thus speaks of the origin of these people. The kardoucher and Gordyacans of the old historians are most probably the direct accessors of the modern kurds, but we do not know when these tribs if list set their foot upon the soil of their present home. The Assyrian smalls and careful excurations on the upper Fuphrates and figure will probably at some future time shed light upon this que time. Further on Dr. Luschen says that the kurds speak an Aryan language, and that their two main groups, are related to the modern Per ian and are typically Aryan.

Vals my paper before the C rela Lattersine of Hombay entitled "La Virto d un Larsi a la Villo de Constantinople

The Journal of the Royal Anthropological Institute Vol. XLI 1911 pp. 223-223.

<sup>3</sup> Real 14 22

Dr Luschan then asks 'Can it be mere accident that a few imles north of the actual frontier of modern Kurdish language there is Boghaz-Kor, the old metropolis of the Hittite Empire, where Hugo Winckler in 1908 found tablets with two political treaties of King Subbiluliuma with Mattiuaza, son of Tušiatta, King of Mitanni, and in both these treaties Aryan divinities, Mithia, Varuna, India and Našatya, are invoked, together with Hittite divinities, as witnesses and protectors?

"And in the same inscriptions, which date from about 1380 B C, the King of Mitamii and his people are called Hairi, just as nine centuries later, in the Achæmeindian inscriptions, Xerxes and Darius call themselves Harri-ya, 'Aryans of Aryan stock'

"So the Kurds are the descendants of Aryan invaders and have maintained their type and their language for more than  $3{,}300$  years '  $^1$ 

Now we have the authority of Findousi, the epic poet of ancient Persia, to say, that the Kurds were an offshoot of the early Iranians of the Peshdâdian times, who formed one of the Western branches of the Aryan stock

According to the legendry history as recorded by Firdousi, there reigned at one time, over ancient Persia, a foreigner named Zohâk? He had over his shoulders two serpents who often tortured him. According to some, he had a particular kind of disease on the shoulders which was spoken of as serpents. The disease pained him much. Ahriman, in the garb of a physician advised him, that the disease or the serpents would cease tormenting him on the application of the brains of two persons every day. So, two of his subjects had to be killed every day to assuage his pain by the application of their brains. When

<sup>&</sup>lt;sup>1</sup> Ibid, p 230

<sup>&</sup>lt;sup>2</sup> There are several facts which lead to show that the Iranian Zohak was the same as the Babylonian Nimrod Vide my paper on 'The Legendary and Actual History of Freemasoury,' in the K R Cama Masonic Jubilee Volume, pp 183 88 Vide my "Masonic Papers," p 82 et seq

this state of affairs continued long there was a great talk about it among the people. There were two great pious men in the city who seriously thought over the subject and sought to allevi ate in some way the misery of the people for the death of two persons daily from amongst thom. Their names were Armail and Karmail They put on the garb of cooks and went before the king offering their services. The king engaged them as cooks Every day two persons were taken to them to be killed by them and to have their brains dressed up and prepared for applications to the diseased shoulders of the tyrantking Thoy killed only one person out of the two and instead of a second person secretly killed a goat every day then mixed the brain of the goat with that of one of the man killed by them and sent in the mixture for application to the diseased shoulders of the king. They thus set at liberty daily one of the two persons and asked him to conceal himself carefully When about two hundred persons were thus saved these kind hearted persons who acted as cooks gave them a flock of slicep and goats and asked thom to go away for into unknown tracts According to Firdous: the Kurds are the descendants of these fugitives from the tyrannical hands of Zohak The Kardenchol of the old historians may have possibly derived their name from the name of Firdousi's Agemail and the Gordvacuus from Ara mail which name when written in Pahlavi may have been read for Garmail or mee rema

Magoudt in his account of the nomadic tribes of the Vrabsesys of the Kurds, that authors do not agree as to the origin of the Kurds. If gives several accounts about their origin. A cording to one account the Kurds were descended from one A condition of the sons of Nizar son of Mand. According to another account, they descended from me Kurd a great grands on of one Hawazin. They emigrated from the country after a quarred with the Gassander. A third account traces their descent from

<sup>&</sup>quot;O nest pas d'accèd ur leur or , no" (Les France D'Or Chap, NASE M coule traduit par Harb e Do Meymarl (La) (Do Court dle Vol. III 1 "43)

3

succeeding gravitions was called Lapik by the Persians. An imported Arab horse or downeter, was not called Tazi but Arabi There of spring, however, from a Persian mare or bitch, received the name of Tan, and were no longer called Arabi

We thus as that according to Di Bellew ilso the Taziks were connected in some any aith the Perusius. They had some Arab blood in them. They acre the decendants of Persitinged of Zorosstramized Arabs.

De Bellew's seitement that 'the term Tapk is derived from the aneuent Person name for the Arab,' is supported by the Publica Bundebesh.' According to the Iranian tradition noted in this look. Mashi and Mishivan formed the original primitive part of mankind. They were as it were the Iranian Adam and Eve. They spoke intruth and brought misery upon themselves. Seven pursource born of them. Out of those seven fitteen more were born. Each of these fitteen became the progenitors of a tribe (saideh) of men. Of these fifteen tribes, nine crossed the sea and went to six different continents. From one of the six that remained on the continents. From one of the six that remained on the continent of Khamiras, a pair was born of which the male was remed Taz and the female Tazik. They went and hyed in a forest, known is the Forest of the Tazikan.'

Zohak (or Dahak), referred to in the above account of the origin of the Kurds was the fourth in descent from the Tâz, the founder of the Tâziks (Arabs). So, he is spoken of by oriental writers, as Zohâk-i Tâzi, in the sense of "Zohâk, the Arab" According to the contents of Chitradad, one of the lost twenty-one books (Nasks) of the Avesta, as given in the eighth book of the Dinkard, 2 Tâz was the progenitor of the Arabs and he was the brother of Hoshang, who was the progenitor of the Irânians of ancient Persans

Bundeheah, Chap MV, 45

It appears from the Nirang attached as an appendix to the Sraosh Yasht (Yacna Hā 57) of the Parsecs that the Tājiks formed a race separate from the pure Persians of the older stock. Though they are spoken of as the Tājiks who put on the sacred thread (Tajik 1 Basta-kustian) : c as Zoroastrians they formed a race apart from the Irânians. They had some Arab blood or element among them 1

<sup>&</sup>lt;sup>1</sup> In modern Behuchstan, the descendents of the original Possians, are still known as the Tailles.

## A FEW NOTES ON THE ANCIENT AND MODERN FOLKLORE ABOUT THE PEACOCK

(Read on 30th October 1912)

President-LT-Col, K R KIRTIKAR, IMS (RETD)

Mi Saiat Chandra Mitia's paper, entitled "The Peacock, in Asiatic Cult and Superstition," sent to this Society, to be read at one of its monthly meetings, has suggested to me the thought of presenting before the Society, a few notes on the subject of the Peacock, collected by me during my studies

Before proceeding to present my Notes, I would draw the attention of the members to an interesting chapter, entitled "A Peacock's Prologue" in a book entitled "The Peacock's Pleasaunce" by an anonymous writer E V B

Firstly, I would refer to the subject of what are called the "eyes" on the tail of the peacock. The following fable of the ancient Greeks, among whom the peacock was a bird sacred to Juno, refers to the transfer of the "eyes" to the feathers on the bird's tail

In Callithyia was a priestess of the goddess Heia or Juno Zeus or Jupiter, falling in love with her, changed her into the form of a white cow, in order to save her from the anger and jealousy of his wife Juno of Hera According to some, Hera herself changed Io into a cow, out of jealousy for her Hera got the cow in her possession and set Argus to watch over her Argus was called Panoptes, i.e., all-seeing, because he had a hundred eyes if Argus tied this cow (Io) with an olive tree Then Zeus sent her messenger Hermes on an errand to kill Argus and to get Io in her posses-

<sup>&</sup>lt;sup>1</sup> Argus is supposed to represent the star-studded Heaven Cf the thousand-eyed (baĉvarĉ-chashma) Mithra, the Avesta yazata presiding over the Light of the Heaven

<sup>&</sup>lt;sup>2</sup> For a comparison between the Hermes of the Egyptians and the Greeks and the Haoma of the ancient Iranians Vide my paper on "The Legendary and Actual History of Freemasonry" in "The K R Cama Masonic Jubilee Volume," pp 172-74 Vide my "Masonic Papers," p 71 qt seq.

sion Hermes killed Argus or according to some hilled him to sleep and set Iofree Juno (Hera) then transferred the hindred eves of Argus to the tail of the peacock which was her favourite bird

As to why the peacock was the favourite bird of Jimo we find the following reason —June has been identified with or has been known by the names of various goddesacs eg Hera I finchis Inachia Astaroth, Astarote Omes or Venus, Luna Sel ne Isis Ino Io Cupres Cupra Ionalia has been sus at times taken for the rainbow—which Cod made a sign in the heavens—voken of his covenant with man "Now Bryant in his autient Mythology says that as the peacock in the full expansion of his plumes displays all the beautiful colours of the Isis (rainbow) it was probably for that reason made the bird of June 3.

Among the Lomans this bird became a symbol of apotheosis or deification. The Romans then gave the symbolism in another form to the carly Christians, among whom it was a symbol of Ftermity and Immortality. It is the to this symbolism that we see the peacock in the Christian tombs of the marters in the contractable at Reme.

According to Pliny the percock belongs to a class of birds which afford presages by their flight. The peacek has precidence of the bird of the class as much for its suignibir beauty as its superior in timet and the vanity it displays. This the speaks of the display of its plunage and of the cycles on the tail.

When it hears itself praised this bird spicials out its gorgeous colours and especially if the unhappenestable hinning it the lim

Here was not originally a proper name but at the the same as the of the Babykin and, and gooded the Baby or poem. (A new ayar moren tradyes I too in Mith k y by Jac bellipart (10) to the Mit P 10). Here Here II ren. Haren in many I & who betch need something matter (Lodin, t).

I Natural Range (11 m) the Natural Rest | 1 Rept | translation Vol H | 100

because then they are seen in all their radiance. At the same time spreading out its tail in the form of a shell, it throws the reflection upon the other feathers, which shine all the more brilliantly when a shadow is cast upon them, then at another moment it will contract all the eyes depicted upon its feathers in a single mass manifesting great delight in having them admired by the spectator. The peacock loses its tail every year at the fall of the leaf, and a new one shoots forth in its place at the flower season, between those periods the bird is abashed and moping and seeks retired spots "1

The peacock is connected with oures—some of them magical—of various diseases. According to Pliny,<sup>2</sup> its dung served as a remedy for several diseases of the eye. The tongues of peacocks were used for epilepsy

Its feathers play a prominent part, even now, in some magical cures. Mr Thurston<sup>3</sup> thus refers to their use as magical remedies in Southern India.

"It is recorded by the Rev. J. Cain that when the Koyis of the Godavery district determine to appease the goddess of small-pox or cholera, they erect a pandall (booth) outside their village under a nim tree (Melia Azadirachta). They make the image of a woman with earth from a white-ant hill, the a cloth or two round it, hang a few peacock's feathers round its neck . . . "

Among the Nomad Basus or Bâwarupas, a tuft of peacock's feathers is carried by robbers and manufacturers of counterfeit come as a magical remedy to prevent detection. In Northern India, the fat of the peacock, which moves gracefully and easily is supposed to cure stiff joints. In some of the customs in Southern India, which serve as relics of former human sacrifices, effigies of peacocks are often used of

<sup>6</sup> Ibid pp. 200-201.

With some, its feathers bring ovil and bad omens because its feathers are supposed to serve demons. The author of the abovenamed book <sup>1</sup> describes the following two stories to illustrate this balls?

There is the oft-told story of a country house and a lady who one day while sitting in the drawing room upstairs laughing and talking with a party of friends suddenly oxclaimed,—starting up and hurrying to the window—Oh the Peacock! She opened the window and instantly disappeared. The startled guests who had rushed after her looking down beheld the lady lying dead upon the gravel beneath the window whilst a beautiful peacock stood near her in his pride with his round of outspread nlumes (p. XI)

According to this story the lady any an actual living peacock. In the following story by the same author we find that the ovil is believed to be connected, oven with the picture of a peacock.

Another tale is told of a fine old mansion semewhere in Wales that had remained empty and tonantions for a number of years A tenant at last was found and a family arrived on a brilliant day in the middle of June. It is said they all went out into the garden and round to the stable court-yard to meet the horses coming from town. They heard their tramp and the voices of the stable men who were bringing then in and one of the lathes went for rading borse a beautiful grey, when she saw just entering through the gate led by the stud groom. The horse advanced with a little neigh of recognition but had no scooner stepped into the court-yard than he suddenly stopped short rearred up and the next moment fell likely daily the matters a feet.

A few days after the owner of the house received a letter from his now tenant stating that an over mantel about the fire place in one of the principal rooms in the hourehald beauther cause of the death of a valuable horse and praying that it me hit least once removed out of the house less a wirse thing should happen

This over-mantel had a certain value of its own. It was a kind of drapery or hanging, made of peacock's feathers, enwound with blue and green and wrought eurously in gold thread and silken needlework, and sparkling with gems. It had been the gift of a dear friend, and had been sent from the Indies, long ago. The tenant's demand caused surprise, but was immediately oboyed, and, with the order for the removal of his peacock-hanging, a letter was sent by the landlord to his head gardener, an old retainer of many years' service on the estate. So, at dead of night, the aged, white-haired gardener, bearing a lantern and a spade, and carrying also the Evil-Eyed fabric over his arm, made his way towards the scoluded, woody outskirts, of the Garden There he sought, under some thick trees, for a Wilderness spot where the earth seemed newly disturbed, and where weeds, and wild my still lay cut and scattered about. The old man dug deep until his lamp shone on some ghostly giey, smooth surface, down below. There, he dropped the folded drapery down, the earth was shovelled back into the grave (for such it was) of the ill-fated horse, while with ruthless foot, the bright green feathers, and relucent gold and emerald gems were at once stamped and trod in firm. And thereafter those tentants slopt in peace" (pp XI-XIII).

This story serves as an interesting illustration of how beliefs or customs, connected with living substances, are gradually transferred even to the shadows or pictures of the thing. In the first of the stories the idea of an evil luck was connected with a real living peacock, in the second, with a mere picture or shadow

The following story, as given by Mis Bishop in her book of travels shows how, in the case of a social custom also, people move from reality to a mere picture, from actuality to a shadow Mis Bishop was once showing the pictures of her travels from a book to a number of purdah ladies, who always went with veils in the company of males. In the course of her work of showing various illustrations to the ladies, she came across a picture of some men and showed it to them. They immediately covered

their faces because there was before them the picture of some males before whom it was prohibitory for women to go without voils

This is an illustration of a gradual movement in the matter of customs from the spirit of the customs to the letter of the customs from reality to shadow

A book of Sir Henry Layard s travels in the East gives another matance of this kind. While travelling he suddenly came across a number of women who were without their purdahs or veils. To cover their faces from the sight of Sir Henry they immediately lifted up their loose gowns under which there was no other under dress and covered their faces with them, disregarding the shame of standing naked before a foreigner for the purpose of preserving their custom of the purdah. This illustrates an attachment to the lotter of a outtom instead of to the spirit.

According to the Persian poet Farirudin Aftar the author of the book entitled "The language of Birds" it was the peaceck that introduced Satan into the Paradice under the form of the seven headed screent. In pumelment for this the bird it elf was expelled from the paradise. Thus in the Fast a bad omen came to be connected with this bird.

The East and especially the great Indian Pennisula as said to be the home of the peacock. Alexander the Great is said to have taken it from India to the We t. It is said that he was so much pleased with its beauty that he prohibited its being killed Alexander possibly familiarized the bird in the West to a greater extent.

Maçoudi the great Arab traveller and historian also refers to the beauty of the Indian peacocks. He ways that when taken to foreign countries, they lost the beauty of their feather. 1

It appears from the OH Te tament that the peaced was taken to the Western countrie of Jana long left in Meanules of the

Macouli tradult per Barber be Meynard II p. 432. Clap XXXII

)

King Solomon is said to have imported it into his country of Palestime from the East 1

The peacock is an old heraldic type of greatness and royalty on account of the beauty displayed by it when its phimes are of encorated to kings. There are eyes' as it were on its feathers. So a presentation of its feather to the king indicates a wish that the king may have many eyes upon his subjects. The peacock was the royal emblem of the kings of Burma, who traced their descent from the sin

The story of the following Gijarati song is the reverse of that of the lady, narrated above and shows, how a queen loved a peacock and how she became a "Suttee" for the loss of this bird. The story embodied in it shows that, with some, a praceck is an auspicious bird and is a sign of good omen and happiness.

## મારનું ગીત.

The purport of the story sung in this song is thus:

A queen had gone to a well with her maids When they filled up their water-pots, a peacock, close by, upset them They filled them up again and the peacock upset and emptied them again This served as a play to the queen and her maids, and the bird became a favourite bird with her Somebody went to the king and said "Lo! your queen plays with a peacock" He, thereupon, sent for his bow and arrow and his sword, with a view to shoot and kill the bird The queen, on learning this, asked him not to shoot her favourite peacock, but to go hunting and shoot the deer The king did not mind her word and went to the well and killed the bird He then carried the bird to the palace and asked his queen to open the door of the palace. The queen opened it and was surprised to see her favourite biid killed by the king in spite of her request not to do so. The king asked her to diess the bird for being cooked She did so, all the time pouring tears from her eyes upon the body of the bud. The king then asked his queen to have with him her meals in which the peacock served as a dish She refused to join him at dinner and continued mourning the loss of her favourite bird and directed that a pile of sandalwood may be prepared in which she may burn herself out of grief for her bild The king offered to do all possible things to dissuade her He offered to build a new palace with all various decorations of peacocks in it, to soothe her grief, but to no purpose She burnt herself out of grief for her favourite bud

In Rajputana, the toran ( तारख) hung on the door of a house as a symbol of mailiage "consists of three wooden bars fastened together in the form of an equilateral triangle and surmounted by the image of a peacock. The symbol is suspended at the por-

tal of the bride <sup>1</sup> Among the Rajputs, a peacock was a favourite cinblem and a peacock a feather often adorned the turban of a Rajput warrier <sup>2</sup>

It is believed by some that the pea-hen conceives not by the usual process of cohabitation, but, by licking the tears shed by the peacook.

A Gujarati book speaking of the omens from this bird, says that if it utters one word, i.e. cross once when a person starts to go to a foreign country that is a good omen for the acquisition of wealth. If it does so twice that prognosticates the acquisition of a wrie i.e. marriage. If it does so three that portends the acquisition of wealth.

## BIRTH CUSTOMS AND CEREMONIES OF THE PARSEES

(Read on 27th November 1912).

President-LT-COL K R KIRTIKAR, I MS (RETD)

At the instance of Rev Di Hastings, the learned Editor of the Dictionary of Religion and Ethics, I had the pleasure of studying, as a whole, the subject of all Paisee ceremonies, rites and customs, and of preparing an exhaustive essay on the subject. But, as the nature of Di. Hasting a stupendous work required only some portions, here and there, as stray articles—and those even often compressed—under different alphabetical heads, I propose placing before the Society the humble result of my study, in the forms of papers. This is the first paper of its kind.

I have tried to give a description of the different ceremonies, rites and customs, giving, where possible and available, references to the religious or semi-religious Zoroastrian books. At times, I have attempted to explain the signification and symbolism without attempting any justification.

Division of the subject.

All the Parsee ceremonies, lites and customs may be divided under the following heads

I. Socio-Religious ceremonies and customs?

II—Punficatory	33	13
III.—Initiation	**	33
IV.—Consecration	<b>33</b>	
V.—Liturgical.	; <b>;</b>	**

#### τ

### SOCIO RELIGIOUS CEREMONIES AND CUSTOMS

The ceremonies and customs that fall under this head, may be subdivided, according to the three principal events of a man s life —birth, marriage and death—under the following heads —

- A.—Birth Ceremonies and Customs
- B -Marriage Ceremonies and Customs.
- C.—Funeral Coremonies and Customs

### (A) Birth Ceremonies and Customs

The birth of a child is a very austicious event in a Parseo House It was so also in ancient Persia The birth of a child. According to the Vendidada Ahura Mazda an auspicious event says - I prefer a person with children (puthrane) to one without children (aputhrai) Even the very ground, where lives a man with his children, is allogorically described as feeling happy 2 Cultivation and a good supply of food to people are recommended because they make mankind healthy and able to produce a healthy progeny To be the father of good children was a blessing from the Yazatas like Tightrya Mithrs. Haoms cand Atar ? and from the Fravashis To be childless was a curse from the Yazatas a Domestic animals, when ill fed and ill treated oursed their master that they may be childless to Childlessness was something like a pumahment from heaven. 11 God-given splendour 12 was assomated with those who were blessed with children.12

A Zoroastrian woman often prayed for a good, healthy child.<sup>3</sup> A Zoroastrian man and woman prayed before their sacred fire for a good virtuous child.<sup>3</sup> A woman without a child was as sorry as a fertile piece of land that is not cultivated.<sup>3</sup> She prayed for a husband who could make her a mother of children.<sup>4</sup>

Among the Achemenides, a wife who gave birth to many children was a favourite with her husband, who did not like to displease her in any way <sup>5</sup> Children being the choicest gift of God, their lives were, as it were, pledged by parents for the solemn performance of an act <sup>6</sup> We read in Herodotus<sup>7</sup>: "Next to prowess in arms, it is regarded as the greatest proof of manly excellence to be the father of many sons. Every year, the king sends rich gifts to the man, who can show the largest number, for they hold that number is strength." Strabo also says a similar thing <sup>8</sup> We learn from the writings of the Christian Martyrs of Persia that the ancient Persians, did not like, for the above reasons, the prohibition against marriage among the Christians in the case of holy young Christian girls.

In the Avesta itself, we find no references to any ceremony or itte during the state of pregnancy. The only allusion we find is this—Women on finding themselves enciente played before Ardviçura for an easy delivery, and then for a copious supply of milk at their breast for their children in The allusion to these prayers suggests, that there must be some formal ceremonies accompanying those players, but we do not know what they were

Coming to later Pahlavi and Peisian books, we find that the Shâyast lâ Shâyast directs, that when it is known that a lady of the family has become piegnant, a fire may be maintained most

<sup>10</sup> Ardvicura Nyâyish, 3,

carefully in the house 1 The Saddar also gives this direction.3 We have the remnant of this injunction in the present custom of some of the modern Parsees who on the occasion of the completion of the fifth and seventh months of pregnancy light a lamp of clarified butter in their houses. The reason, assigned for this in the Pahlavi and Persian books is that the fire so kindled in the house keeps out daepas se evil influences from the house A fire or a lamp is even now taken to be symbolical of the continuation of a line of offspring. For example, it is not rare to hear even now words like these Taméro cherne roshan raké ' May your lamp be always burning This benediction is meant to say May your son live long and may your line of descent continue

According to the Avesta in the state of pregnancy a woman is to be looked after very carefully. It is wrong for the husband to have sexual intercourse with her in her advanced state of pregnancy which according to the Revayets commences with the fifth month. She is to abstain from coming into contact with any dead or decomposing matter even with a thing like one a tooth pick which may contain germs of one a disease 4

During pregnancy the modern Parsees have no religious ceremonies or rites. On the completion of the The fifth and the seventh months of fifth month of pregnancy one day is celebratpregnatoy observed as days of reed and known as Panch masium se the joicing. day of the fifth month. Similarly a day is observed on the completion of the seventh month, and is known as agazma: These days are observed as auspicious days of re-

porcement only in the case of the first prognancy They are ob served not in accordance with any religious injunction or with religious ceremonies or rites The expectancy of o child being

<sup>3</sup> Four months ten days. Vide Auquetil Du Perron, Zend Avesta, Vol. II p. 463

<sup>\*</sup> Shayant 11 Shayant Chop. Y 20; YH. 13, (S. B. E. Vol. V PR. 323 314); Saddar XVII 2 (S. B. E. Vol. XXIV p. 275)

after the completion of the seventh month—are observed as joyous occasions, when the lady who is enceinte is presented with suits of clothes by her parents, relatives and friends and especially by the family of her husband. The husband, is in turn, presented with a suit of clothes by the wife's family. Sweets are sent out as presents by the husband's family to the bride's house and to near relations and friends. In these sweets, one prepared in the form of a cocoanut, has a prominent place. A cocoanut typifies a man's head 2 and so it is a smybol of fecundity. Some of the customs observed on these occasions are more. Indian in their origin, and signification than originally Persian or Zoroastrian.

In the case of the first delivery, it generally takes place in the house of the wife's parents A room or a Place of Delipart of the room, generally on the down floor, very and its consecration is prepared and set apart for the purpose the Vendidad a says, the place for delivery must be very clean, It appears, that in former dry and least frequented by others times, such places were specially provided in Parsee houses on the down-floors Parsee houses in those times had generally spacious down-floors that were used for all purposes The upper floors were low, and were rather like lofts So, the down-floors provided proper places for delivery, as enjoined in the Vendidâd But, as, with changed circumstances, Parsee houses of to-day are not what they were before, and as, at present, in storied houses

<sup>&</sup>lt;sup>1</sup> Among the Rajputs of India, the acceptance of a cocoanut is a symbol of the acceptance of a proposal for marriage (*Vide* Tod's Râjasthân.)

<sup>&</sup>lt;sup>2</sup> The following story connects the cocoanut with a man's head. An astrologer once said to a king that whatever was sown or planted on such and such a coming auspicious day, would grow well. The king said. "Suppose somebody sows a man's head on a stony ground; will that also grow up into a luxuriant tree" "Yes," said the astrologer. The king, thereupon, cut off the head of the astrologer and sowed it in a stony ground. The cocoanut palm grew out of it (Journal of the Ceylon Asiatic Society, January 1891).

<sup>3</sup> Chap. V, 16.

the down floors in big towns are generally the worst part of the houses places of delivery at the down floor are now-a-days proper iy condemned as unhealthy. In the case of a house or a place, where no delivery has taken place before the religious-minded persons generally take care that a religious ceremony may be performed there before the delivery. In other words they get it consecrated. A pract or two say and perform the Afringan prayer and ceremony over the place. At times even the Båj prayer is recated.

On the birth of a child, a lamp is lighted and kept burning, for Allamp lighted at least three days in the room where the lady on the birth of a is confined. The Saddar speaks of three days, a lit says. When the child becomes separate from the mother it is necessary to burn a lamp for three nights and days if they burn a fire it would be better—so that the demons and flends may not be able to do any damage and harm because when a child is born, it is exceedingly delicate for those three days.

Some people keep the lamp burning for ten days and some for forty days which are generally observed as the period of confinement

On delivery the mother is enjoined to remain apart from others.

Period of each should be in not to come into contact with fire more of the house? In rery 40 days. the case of those that give birth to still born children it is enjoined in the Vendidfid? that they must thus remain apart for 12 days. This period has been latterly extended, as described in the later Pahlavi and Persian books to forty days in all cases of delivery. Now-a-days a Parsee lady has generally forty days of confinement after delivery.

The Sadder says "During forty days it is not proper that they should have the child alone and it is also not proper that the

<sup>1</sup> Chap. XVI 2 R. R. E. Vol XXIV, p. 277

Vondidad, V 48-40

<sup>3 \</sup> andlilad, V. 55-50.

mother of the infant should put her foot over a threshold in the dwelling ( $\iota e$ , leave the house) or cast her eyes upon a hill, for it is bad for her menstruction "1

Some families, following the Hindii custom, observe the fifth day after birth known as packery ( $\iota e$ , the fifth day) and the tenth day known as Dasoii ( $\iota e$ , the tenth day) as gala days, but these days have no religious signification whatever

During these forty days, the lady is in a state of isolation. She is not to come into contact with any body and with any part of the ordinary furniture of the house, especially wooden furniture and linen articles. Her food is to be served to her on her plate by others. Those who have to come into contact with her, have to bathe before they mix with others. Even the medical attendant had to do so; but, now-a-days, this samtary rule is more honoured in the breach than in its observance. The original injunction seems to have been intended to observe "purity" in order to prevent the spread of the puerperal fever and such other diseases to which women in this state are subject 2

<sup>&</sup>lt;sup>1</sup> Chap. XVI 4, S B E. Vol XXIV, p. 277.

Wide The chapter on 'Maternity and its Perils" in Mr. Havelock Ellis's "The Nationalization of Health" (1892) pp 123 143. It says that in England and Wales where 4,500 women die every year in childbirth "about 70 per cent of this mortality is due to puerperal fever" and that "almost the whole of this mortality might be avoided ' It is the careless medical practitioners and midwives, that are responsible for this mortality because they do not take sanitary care, and carry germs from one woman in confinement to another The Midwifery writers of old said to their disciples "Thine is a high and holy calling; see that thou exercise it with purity " In the enjoined isolation of the Parseo women during their confinement, the original intention seems to be that of observing purity Some of the later Pazend and Persian writers have not properly understood the original good object of the early writers, and so, have carried the rigour of isolation too far. But anyhow, the original mjunction of isolation is intended for the purity referred to by old midwifery writers,

At the ond of forty days which is the period of confinement the Purification.

Purification. Is also be purify herself by a both before ordinarily muxing with others. At first, she takes nordinary both and then goes through what is called non a

an ordinary bath and then goes through what is called nan a contraction of the Sanskrit word snan which has accord bath  $\Lambda$  priest generally the family priest administers that bath with consecrated water

All the bedding and clothes of the woman used during the Rejection of her forty days of her confinement after delivery bedding and are rejected from ordinary use. They are on clothes. joined to be destroyed lest they carry germs of disease among others. But now a-days that injunction is not strictly followed.

Formerly a mother in child birth first drank a few drops of the sacrod Haoma juice which was aqueezed and consecrated in a fire-temple. The new born child also was made to drink a few drops of this juice. Anquetid Du Perron <sup>2</sup> refers to this religious custom as prevalent in his time. In the Hom Yasht <sup>2</sup> Haoma is said to give fine healthy children to women. Haoma was emble matical of immortality. But now a days this oustom is raioly observed and in place of the Haoma juice a sweet drink made of molasses or sugar is given to the child as a first auspicious drink.

Herodotus' refers to the custom of naming the child among Naming the the amount Persons We infer from what child. The says that the parents waited for some time after birth and then watching the physical and mental characteristics of the child gave them such names as indicated their characteristics. In the case of modern Pursees many name the child after an immediated deceased ancestor. A Parsee name is made up of three names. The first is his general name. The second is his father a name and the third is his surrance or family name. Now it is the first of these three that is the proper name.

<sup>2</sup> Zand Avesta II, p. 504. 2 kajna IA, p. 22. 3 Bk. I, 130

of the child, and in the case of that name, many prefer to call a child by an immediate ancestor's name. Suppose a person named Jivanji had his father named Jamshedji, and his mother named Awabai. Then on the birth of a child, if it is a male child and if his own father (Jamshedji) was dead, he would prefer to name it Jamshedji. If it were a female child, he would like to name it Awabai after his deceased mother.

Some resort to a so-called astrologer and name the child as advised by him. This process of naming the child has one particular religious signification, and it is this. In all religious ceremonies, during life or after death, a person's name is recited as he or she is named at the time of his or her birth. This name is called, Janum-nâm or buth-name In his or her Naojote or sacred shirt and thread ceremony, marriage ceremony, or any other ceremony. enjoined by him or her during life time (Zindah-ravân), the birthname is recited together with the father's name In all the ceremonies after death (Anôsheh-râvan), the name is similarly recited In the case of a female, her personal name is recited together with that of her father as long as she is not betiethed But after betrothal her name is recited together with that of her husband As a lady's name is recited with her husband's in all ceremonies after betrothal, the ceremony of betrothal is known as "Nâmzad shudan" in Persian oi "Nâm pâdvun" in Gujarati, meaning "to give a name "

The birth-day of a Parsi child—and especially the first birth-day—is an important day. No religious rites or ceremonies are enjoined as necessary. But the parents generally like to celebrate it in, what one may call, a religious way. After a bath and a new suit of clothes, the child is generally sent with some sandal wood to an adjoining Firetemple. There the ashes of the sacred fire is attached to its forehead. Some of those, who can afford, get a religious ceremony known as Fareshtâ¹ performed. That is generally done on the

## A FEW TIBETAN CUSTOMS AND A FEW THOUGHTS SUGGESTED BY THEM. THE PRAYER-FLAGS

(Read on 30th July 1913)

President-Lt -Col K R KIRTIKAR, LM.S (Retd.)

I had the pleasure of paying in May-June this year a five weeks visit to Darjeeling, that beautiful queen of the Himslayan hill-stations, which interests us—people from the south—mostly from two points of view

Firstly its beautiful scenary 1 I have seen the Himalayan snows from several places in the north-from the valleys of Cashmere Kangra, and Kulu, and from hill stations like Simla Murroe and Dharmsala I have walked over its snow in a shady corner of the Banihal Pass lu Cashmere and on a hill at Nalkanda near Simia. Thus I have onjoyed the Himalyan scenery from various places But I think the scenery of Darreeling has a charm of its own, the beautiful tea-gardens on the slopes of the adjoining hills adding to its beauty. The sight on a clear morning of Mount Everest the highest peak of the Himalayas (29 000 ft.) from the Senchal Peak (8100 ft.) and Tiger Hill (8 500 ft.) about 7 to 8 miles from Darjeeling satisfies our enriceity of seeing from a distance the lofticat mountain in the world, but it is the great Kinchinganga, that pleases us the most Standing on the summit of the Tiger Hill oce clear and quiet morning on the 27th of May 1913 with the Himalayan range before me with Mount Everest in the furthest distance and the grand Kinchinganga presenting its brilliant and

As said by Mr Bomwotsch in his "Hand-book to Derjecting, the Himalayas, the Nisgara Falls and the Pyramids of Egypt are considered to be "the three greatest wonders of the world,"

beautiful snowy front in the nearest distance, I was led to remember these first few lines of Milton's Comus—

"Before the starry threshold of Jove's court My mansion is, where those immortal shapes Of bright aerial spirits live insphered In regions mild of calm and serche an, Above the smoke and stir of this dim spot Which men call Earth"

Secondly, its Bhutiâ people. The next thing that interests us, southerners, is the people of the different hill races of the Mongolian type that are found there. We see at Darjeeling, the people of Sikkim, Nepaul, and Bhutân. Darjeeling itself, at one time, formed a part of the country of Sikkim. Its district now meets the frontiers of Sikkim, Nepaul, and Bhutân—of Nepaul on the west, of Sikkim on the north, and of Bhutan on the north-east. Tibet is situated further to the north. Bhutiâs" is the general term by which the people of these different countries, who profess Buddhism as their religion, are known here. They come from Sikkim, Nepaul, Bhutân and even Tibet.

The Dargeeling Gazetteer says — 'The word Bhotiâ means The native names of properly an inhabitant of Bhot or Tibet, and is synonymous with Tibetan. The native name of Tibet is Bod, and the Sanskrit form of this word was Bhot. The Sanskrit-speaking races of India have accordingly called the inhabitants of this region. Bhotiâs. The country of Bhutân was so called by the Bengalis in the belief that it was the end of Bhot. (Bhotânta), and the natives of Bhutân, as well as Tibet, are indiscriminately called Bhotiâs. The English word Tibet, appears to be derived from the Mongolian Thubot, which is the Mongolian name for the northern portion of the Tibetan plateau."

<sup>1</sup> Bengal District Gazetteers—Darjeeling, By L S S O'Malley (1907), p. 46.

I propose placing before the result of my observations papers, ty study at this station. I had and of mure of observing their religious the pleasy their monasteries and at their

customs and manners at three tages of Bhutia Basti, Tong Song, houses I had visited their villom, Sukrapuri and the village Aloo Barı (potato-garden) Ghol. Their monastenes, known as formed on the frontier of Nepath, and I remember with pleasure gompas interested mo very muckweral days in visiting them and the several hours I spent for as or priests. Their monasteries in the company of their Lamins interested in the subject of appealed to me because I wege where I had competed for a monasterics when I was at Col The Dissolution of the Monaste-Prize Essay on the subject of renry VIII It was that interest ries in England in the reign of Fonastenes in Italy I remember that had led me to visit some u July 1889 of the Chartrense specially my visit, on 30th t Naples, which, at one time or Monastery of St Martino onks, but is now held by the belonged to the Carthusian noh contains a picture—valued Italian Government and whines—of the three Persian Mogas I was told, at 150 000 in to see the child Christ. Again, going with all oriental pomp saiting these monasteries was the what added to the interest of me, that, as Buddhish had some fact that it was believed by stanity the Buddhist monasteries influence on the varly Chrotin monasteries.

had some unfluence on Christu ries in its vicinity One is near Darjeoling has three monast leading to Lebong. The second the Bhutia Basti on the read oom It commands a beautiful is situated on a hill near Ghout. The third is at Ging, about view of the country round abig. It is situated in a pictureague two or three miles below Lebonumber of fruit trees. The first quiet place surrounded by a paid it about alx visits, and had monastery being nearer I had observing its religious services, spent a number of hours threplions. I had paid two visits to and joining its religious proces to that at Ging

In Darjeeling, one sees, at it were, only a tinge of the Tibetans and of their religion, manners and customs. So, I pray, that to my papers, only that much value may be attached, as to those based on one's observations at, what may perhaps be called, the borders of the Tibetan country. The result of the observations has been supplemented by the knowledge gained from a study of the books of travellers and from a personal talk with some of them. Among the travellers, I name with gratitude, Rai Sarat Chandra Das Bahadur, CIE, the author of the "Journey to Lhasa and Central Tibet" and of other interesting publications on Tibet, and Revd. Ekar Kawaguehi of Japan, the author of "Three years in Tibet." I had the pleasure of having long interesting conversations at Darjeeling with these well-known travellers

The first thing that draws one's attention on entering Darjeel-Three kinds of prayer. ing and on visiting its inonasteries and the houses of its Bhutiâs, is, what can be generally classed as, the Prayer-machines of the Tibetans

Under the subject of "Prayer-machines," I include them

Prayer-flags
Prayer-wheels, and
Prayer-beads or Rosanes

I will speak to-day of their Prayer-flags. Mr Walter Hepworth,

m his article on Flags, in the Encyclopædia Britannia, says "It is probable
that almost as soon as men began to collect together for common purposes, some kind of conspicuous object was used, as
the symbol of the common sentiment, as the rallying point of
the common force" He adds that "flags or their equivalents
have often served, by reminding men of past resolves, past
deeds, past heroes, to rally to enthusiasm, those sentiments of
esprit de corps, of family pride and honour, of personal devotion,
patriotism, or religion, upon which, success in
warfare depends"

<sup>1</sup> Vol. IX, 9th edition, p. 276.

As said in the above passage we see that religion, is one of the

Question as to whother flag was first used for Rebuion or for War. many things, the sentiments of which are sought to be ralled to enthusiasm by means of flags. In no religious communi

ty is this seen to such a great extent as among the Bhutus or Tibetans. It is a question, whether the first common purpose for which man began to use the flag was Religion, or War From the ancient history of Persia, as referred to by Firdonsi it appears that the flag first came to be used by men for the purpose of warfare some thousands of years ago Kaveh Ahangar (Kayeh, the Blacksmith) when he raised a revolt against the tyrannous rule of Zohak prepared a flag for the first time in Persia. He took a wooden pole, and raised over it the piece of leather with which he covered his body while working at his workshop as a blacksmith. Therewith he first raised the banner of revolt and many Permans railed round it. With that banner-the very first Iranian banner-he and his followers went to Fundun and implored him to march against Iran, and to rehave the country from the oppressive yoke of Zohak. Paridun marched with that primitive banner to Iran and freed the country from the foreign rule of Zohik. From that time forward, the Kavehani banner (s. c. the banner first prepared by Kayeh, the blacksmith) became the standard of Iran and carried its army to many a viotorious battle. It formed the National banner and, though its material was changed more than once, under the national name of Daraish i Kavchani (s c. the Drapeau of Kaveh) it continued as a whole till the time of King Yazdazard the last of the Sassanian kings, when being embellished with rich and precious jewels by many kings, it was valued by erores of rupces. In the Vendidad, 2 which seems to have been written at some time before 1200 B C, we find a reference to a drapeau flying over a royal city. The royal city

<sup>1</sup> For further particulars about this banner vide my poper on Gura (Journal of the Anthropological Society of Bombey Vol. VIII, No. 7 pp. 478-496). Vide my Anthropological Popers (Part I), pp. 213-25. 2 Venddidd Chap, I, 7

of Bâkhdhi (Bulkh), where lived king Vishtasp, the royal patron of the religion of Zoroaster, is spoken of as the city of "the exalted drapeau" (eiêdhvô drafshâm).

But, for the present, we will lay aside the question, as to which was the first to introduce the use of flags among mankind—the Army or the Church—and simply say, that flags played a prominent part in the places of worship of many nations. In our country, we see them in the form of Dhajâs or nishāns on Hindu temples and Mahommedan mosques. They take a prominent part in ieligious processions

The Bhutiâ or Tibetan flags, which play a prominent part in the religion of the Tibetans as a kind of prayer-machine, differ from the flags of other nations in this, that they are, to a great extent, what may be called, Prayer-flags. The flags of the Hindu temples or Mahommedan mosques carry some religious devices, but they are not prayer-flags in the sense, in which the flags of the Tibetan gompâs or monasteries, or some of the flags of the Tibetan houses are Frist of all, we must clearly understand what we mean by "Prayer-flags"

By Prayer-flags are meant flags, (a) which have prayers inscrib-Essentials for a Tib. ed on them, and (b) which, by fluttering etan prayer-flag. high in the air, are believed to repeat, on behalf of the votaries who offer them, certain prayers.

(a) As to the first essential of a prayer-flag, viz., the inscription of prayers on it, the prayers may be short or long, according to the size of the flags. All the monasteries have wooden plates upon which the prayers are carved. They are generally imported from the big monasteries of Tibet. With an application of a particular kind of ink or a kind of colour, the Lamas stamp the flags with the prayers inscribed on the plates.

The votaries carry their own cloth to the *gompâs* or monasteries, and the Lamas or priests there, stamp the cloth with prayers. The most common prayer inscribed on it is the well-known Buddhist prayer "Om Mâni Padme Hûm", i e, "Hail! The Jewel

in the Lotus Flower 1 This short prayer seems to hold the same position among the Tibetans as the Pater Noster among the Christians the Akanawar among the Zoroastmans, the Resmillah among the Mahomedans. The votances carry the prayer-stamped cloths home and hoist them on or rather attach them to long wooden poles. They take these poles to their monasteries or other smaller sanctuance as offerings and put them up in the compounds of the monasteries. They also put them up in the front of their houses. It is said that they put them up even when travelling, near their tents 2

(b) As to the second essential of a prayer-flag, vi... that it should flutter high in the air the principal idea at the bottom of the custom of having a prayer flag is that by fluttering in the air it repeats on behalf of the votaries, the prayers in scribed on it. So the higher the pole of a flag the greater the chances of its catching even the gentlest of breezes and the greater the flutter. As each fluttering movement is believed to repeat the prayer insorthed on the flag the greater the flutter the greater the meritoriousness to the offerer.

In the case of other religious communities their places of worship have generally one flag, or at times two or three. But in the case of the Bhutas or Thotans, their pompas or monstances their shrines and other places of worship have a number of them. On entering into the compounds of their monasteries you see at times, about 30 or 40 posted there. On grand occasions, public and private or domestic they present a flag as an offering to the monastery and plant it in its compound believing that its fluttering there would repeat a number of prayers on their behalf in that place of worship. Again, in the case of some other nations their religious flags are generally confined to their religious places or to their religious processions, but in the case

<sup>&</sup>lt;sup>1</sup> Vols Dr. Weddell a "Buddhlem of Tibut or Lamaism pp. 148-60 for a full explanation of this mystic formula.

<sup>1 &</sup>quot; Leross Tibel by Bonvalot, Vol. II. p 12

of the Bhutias or Tibetans, they are put up even at their houses. There is hardly a Bhutia house, which has not one or more flags fluttering high in the air before it—In fact, you can distinguish a Bhutia village from a distance by the number of flags you see flying there from big poles. Occasions of joy and of grief are the times when they hoist these flags—On occasions of joy they erect them for 'good luck' '1

When a person dies in a house, a flag in his honour is hoisted

Prayer flags and It is believed to repeat prayers on his death behalf or for his good. If there is more than one death during the year, more than one flag is hoisted. They generally see, that the flag flutters there during, at least, the first year of the death. If the cloth of the flag is torn by the force of the wind they renew it

Besides these flags on long poles seen at the monasteries and near the houses of the Bhutias, one Variegated colours of prayer flags sees small flags or bannetets in various places, principally at some public or private shimes or altars, on streams or rivers, and in the hands of wandering priests or At the smaller shimes and at the altars in the priestesses houses, these flags also take the form of a long string of cloth cut in a variety of forms One sees such a shrine or altar on the Observatory Hill at Darjeeling It is a sight worth seeing and even worth admiring, for those who take an interest in the subject, to see Bhutiá women coming up to the sanctuary on this hill in the early morning, and to observe the devotion with which they present their offerings, and hang rows of bannerets there. I exhibit a few strings of these bannerets

These mountain tribes live in the midst of the variegated colours of Nature 'The wild flowers, shrubs and plants of the hill-forests give them, as it were, a taste for a variety of colours. The rising and the setting sun gives various beautiful hues and tints to their mountains and to the perpetual snows opposite

<sup>1.</sup> Col Waddell's "Lhasa and its Mysteries", p 145

They have and grow as it were in a feast of colours. So they have a wonderful fondness for colours. I have noticed this in many a bill tribe of the Himslaysa. I have seen this in their mountain faure—at the mountain fair of Sufi at Simla on 14th May 1906 and at the mountain fair of Siddhban on the way to Dadâ from Dharamsâlâ in the Kangra Valley on 23rd May 1899 The women muster at these fairs in large numbers. It is a pleasure to see them in their dresses of variegated colours. Even their shoos display a variety of colours. At Darjeeling they generally buy only the soles of their boots in the Bazaars, and make up the upper part at home from thick warm clothes of variegated colours according to their tastes. This taste of colours they carry to their gods to their tentles, shrines and altars.

It is said that all art had its early home in the Church. The Church has been the original home of Crude are displayed in them. Drama, Music Painting, Sculpture and such other arts. One sees that in however a rude beginning, on the Observatory Hill at Darjeeling On many a pleasant morning I was there saying my silent prayers to Nature and to Natures God and hearing the prayers of the hale and hearty simple folk of the hill. The women came there holding in one hand a home-made portfolio containing various things for offerings, and in the other a kettle or jug containing their favourite drink of Marwa, their god s drink. Among the various things of offering, one was a piece of cloth. They carried with them saissors with which they out the cloth artisti cally-and their art was of course of the roughest kind-accord ing to their taste. They then conscerated it by waving it several times over the fire burning before the alter and hung It over the shrine or altar The cloth took the form of a string of pendants or toran. Some of the pleces of the cloth were stamped with prayers. One sees as it were a forest of such strings of pendants on the Observatory Hill, not only over the central abrino or altar but also over some of the adjoining trees. under the shadow of which stood some smaller shrings.

Next to the shrines, one sees such strings of pendants also on the altars in the houses. Again, ban-Flags on streams and nerets in the form of strings of pendants are seen over streams and streamlets The Tibetans believe in a class of spirits or goblins, hovering everywhere and especially on the banks of streams or rivers. So, in their honour, they put up small flags across these streams These take the form, not of poled-flags, but of a hanging string of pendants, such as those we find hung on gay ceremonial occasions in our country The larger a stream, and the broader its ravine or bed, the greater is the seat of the spirit string, or, if I were to speak in our Indian word, the toran of small flags is, at times, 100 to 150 feet long, according to the breadth of the ravine through which the stream flows It is fastened to trees on both the banks of the ravine At times, the stream may be hundreds of feet below their houses or roads, and at times at the distance of a mile or so In that case, instead of going down to the stream, they put up the string bannerets near their villages on some place above the stream. I saw a very long string of this kind at the village of Tong Song, which stands above a big stream, whose roaring noise, after a heavy downfall of rain, was heard for days together on a part of the Mall.

Rai Sarat Chandra Das Bahadur, while speaking of the flag-poles about 20 to 25 ft high with inscribed banners, which he saw at Lhasa, thus speaks of the "fluttered fringes about a foot and a half broad" seen at various places in Tibet "These fringes' are cotton strips on which are printed charms (mantras) Usually the figure of a horse occupies the middle of the strip They are called lung-ta or wind-horse,

The 'inscribed banners' belong to the same class of objects, and have also prayers or passages from the scriptures printed on them "2"

Col Waddell<sup>3</sup> thus speaks of these prayer-flags "These prayer-flags are luck-compelling talismans. They are called pragon-horses,' and bear in their centre the figure of a horse with the mystic 'Jewel' on its back, and surrounding it are spells which combine Indian Buddhist mysticism with

<sup>&</sup>lt;sup>1</sup> Vide the reference to the worship of the horse in the Pahlavi Bundehesh (Chap. xxviii 34) in connection with the worship of But, vide above

<sup>&</sup>lt;sup>2</sup> "Journey to Lhasa and Central Tibet", by Sarat Chandra Das, C.I.E (1902), p 149 n

<sup>3 &</sup>quot;Lhasa and its Mysteries", by Dr. L. A. Waddell (1905), pp 85-86.

Chinese myth, and are intended to invoke the aid of the most favourite divinities of the Lamas upon the person who offers the flag and whose name or year of birth is generally inscribed thereon. The divinities invoked are (1) He who conveys wisdom (Manjusts) (2) He who saves from hell and fears (Avalotita incarnate in the Dalai Lema) (3) He who saves from accident and wounds (Vajrapans), (4) He who eleaness the soul from sin (Vajrapans) and (5) He who confers long life (Amilague)

Colonel Waddell reproduces in his book the inscription on a flag and gives its translation as follows: ---

Hail! Wagsehwars mum 21

TIGER Hall! to the Jewel in the Lotus! Hung 4 LION

Hail! to the holder of the Dorje; (or thunderbolt)! Hung: 1

Hall! to the Diamond Souled one =1

Hail! Amaraknihdswaninye Swahih!

(The above is in Sanskrit now follows in Tibetan)

Here! Let the above entire collection (of delties whose spells have been given) presper (here is inserted the year of birth of the individual) and also presper—

The Body (se to save from makness)
The Speech (se to give viotories in disputes)
And the Mind (se to obtain all desires)

PHŒNIX. Of this year holder (above specified) DRAGON and may Buddha a doctrine presper!

One sees these prayer flags at Darjeeling in, as it were, their different forms of evolution or rather of degeneration. We see

<sup>1 &</sup>quot; Lhasa and its Mysteriov by Dr L. 1. Woddell (1903) p 87 The words in the 4 corners represent the position of the figures of those animals in the fig.

Those are the spells of the first four divinities named in Col. Wad dell's above description of the prayer flag.

Dorje is a religious instrument in the monastery. It symbolises cooled authority. It is this word which has given Darjooling its name.

them in their full forms in the compounds of the monasteries. These forms are, more or less, preserved near the houses of the Bhutias. On coming down the hill, we find near the houses of poor Bhutias the flag-poles with very sparse cloth. Then, some of them seem to be even without the prayer forms. Lastly, we find mere poles without any flag or cloth attached to them.

In the high ritual of the Tibetan Church, there is a particular process of flag-saluting in which their different gods seem to have different flags. Dr Sven Hedin gives an interesting description of the ceremony. In his description of the New Year Festival of the Court of the Tashi Lama he says—

"Now the religious ceremonies begin The Tashi Lama takes off his mitte and hands it to an acolyte. All the secular loids on the open platforms also take off their mushroom-shaped Two dancers with gruesome masks, in coloured silken hats dresses with wide open sleeves, come forth from the lower gallery, the curtain being diawn aside, and revolve in a slow dance over the quadrangle Then the Grand Lama is saluted by the eleven principal standards in Tashi-lunpo, every idol has its standard, and every standard therefore represents a god of the copious Lamaistic mythology, but only the standards of the eleven chief deities are brought out. The flag is square. but strips or ribands of a different colour project at right angles from the three free edges, there are white flags with blue strips, blue flags with red ribands, red with blue, yellow with red strips, The flag is affixed in the usual way to a long painted staff, round which it is wrapped when a lama brings it out He marches solemnly up, halts before the box of the Tashi Lama, holds out the staff horizontally with the assistance of a second lama, and unrolls the flag, and then the emblem of the god is raised with a forked stick to salute the Grand Lama

<sup>&</sup>lt;sup>1</sup> Trans-Himalaya, Vol I, p. 315

It is then lowered again, the flag is rolled up and the staff is carried sloped on the shoulder of the bearer out through a gate beneath our baleony. The same ceremony is observed with all the standards and as each is unfolded a subdued murmur of devotion uses from the assembly

Col Waddell in his very interesting article on prayer flags in his learned book on the Buddhism Origin of Proyer flags. of Tibet 1 points to the pillars of Asoka in India as the source or origin of the Tibetan Prayer flags or Bur mese Prayer posts He says Both are erected by Buddhists for the purpose of gaining merit and displaying aloft pious wishes or extracts from the law and the surmounting geese form an essential feature of the abscus of several Aşoka pillars change from pillar to post could be easily explained as great monoliths were only possible to such a mighty Emperor as Asoka but every one could copy in wood the pious practice of that great and model Buddhist who had sent his misdonaries to convert them They (prayer-flags) are called by the Lamas Da-cha, evidently a corruption of the Indian Dhvaia the name given by the earlier Indian Buddhists to the votive nillars offered by them as railings to Stupas concluding sentence of the legend inscribed on the flag is usually Let Buddha's doctrine prosper 3 which is practically the gist of the Aroka inscriptions

We referred above to the fact of the religion being much in Religion in cridence.

A reason to: it.

it in ordence

<sup>1</sup> The Buddhism of Tibot or Lamaism, by L. A. Waddell (1893) pp. 408-18.

<sup>1</sup> Cf the Indian word WAT dhard for a flag.

<sup>3</sup> Of a Zorastrian a daily prayer "Did Din Boh Mazdayaçadın âgabi ravdi godiaragini bid haftê keshvar jamin Lt. "May the justice know lodgo promulgation, and giory of the good Mazdayaçni religion apread over (all) the soron continents of land.

We read the following on the subject in the narrative of Bogle's Mission

"They creet written standards upon the tops of them (mountains), they cover the sides of them with prayers formed of pebbles, in characters so large 'that those that run may read'".

One can easily understand, why religion is more in evidence in Tibet than elsewhere, and why there are a number of prayer-flags, prayer-wheels, and big-lettered prayers on rocks, near springs and rivers in Tibet, and why they believe in the existence of spirits in streams and rivers, when he understands the difficulty, at times, of crossing these unbridged streams and rivers, a difficulty which causes the loss of many lives. Dr. Svon Hedin's description of the terror which struck him at the end of his Tibetan Journey, while crossing the Sutley, gives us an idea of the difficulty of the road and also of the fact why religion is so much in evidence in Tibet. While observing the mode in which he was made to cross the Sutley, suspended "between sky and water from a cable across its bed, he says

"I have explored this river and discovered its ultimate source. Surely the discovery demands a victim! I never entertained such great respect for this grand majestic river as at this moment, and suddenly I realised the meaning of the chlorten pyramids and carries of the Tibetans on banks and bridges, those cries for help against the uncontrollable powers of nature, and those prayers in stone to mexorable gods. My eyes fall on the gigantic white cauldron boiling in the abyss below "2

The way, in which Di Sven Hedin was made to cross, or rather was pulled over to cross, the river by means of a cable, was so terror-striking that the two missionaries, who had come

<sup>1</sup> Narratives of the Mission of George Bogle to Tibet and of the Journey of Thomas Manning to Lhasa by C R Markham (1876) p. 70.

<sup>&</sup>lt;sup>2</sup> Tians Himalaya, Vol III., pp. 395 96.

to the opposite bank to receive him, congratulated him a on having performed the short aerial journey without mishap and told him that an Englishman had turned back on seeing the cable. No wonder then, that the uncultured sample Tibetons resort frequently to prayers in this land of risks and dangers. I personally realize the terror which should strike one on a similar occasion, as I had the opportunity of seeing, though not of crosung, a rope bridge over the Jhelum in Cashmere, while going from Murree to Srinagar in May 1805 This bridge was not of the same type but was one, over which passengers are carned blindfolded on shoulders by the villagers used to the mode. One thought suggested to us by the consideration of all the above modes in which religion is kept in evidence in Tibet, is that even civilized countries try to a certain extent to keep it in evidence. The inscriptions in large characters of scriptural passages on the walls of churches and on the walls of schools in scriptural classes and the religious paintings in places of worship are to a more or less extent another form of keeping relimon in evidence

## A FEW TIBETAN CUSTOMS AND A FEW THOUGHTS SUGGESTED BY THEM. THE PRAYER-WHEELS

(Read on 21th September 1913)

President-Ia Col K R Kninkak, LMS, (Reid)

In my paper before the Scenety at its July meeting at the outset, I divided the subject of the Prayer-Machines of the Tibetans into Prayer-flags, Prayer-Wheels and Prayer-Beads or Rosaries. I then dwelt, at some length, on the subject of the Prayer flags and exhibited some of their small Prayer flags and their prayer-streamers of variegated hies. To day, I place before the society, a specimen of their small prayer-wheels, and will speak on the subject of these prayer-wheels which I saw at Darjeeling in their gompas or monasteries, at the family altars in private houses, and in the hands of the itinerant Lamas and their laymen and laywomen

The prayer-flags first draw our attention when entering into the compounds of Buddhist monasteries at Daijeeling. Then, the next thing that draws our immediate attention, is the number of prayer-wheels which we see arranged in a row on the two sides of the entrance to the monastery. These prayer-wheels are also spoken of by different travellers of Tibet, as prayer-barrels, prayer-cylinders, prayer-drums, prayer-mills and even as prayer-machines. They turn on an axis from the right to the left. They have Tibetan prayers inscribed on them on the outside. The axis in the hollow of the machine has a roll of paper—large or small according to the size of the machine—which is inscribed with Tibetan prayers.

It was on the morning of the 21st of May 1913, that I saw, for the first time in my life, a Tibetan gompa of a Prayer-wheel or monastery and its prayer-wheels, of both of which I had occasionally read a good deal. The prayer-wheels or barrels, which I saw at the gompa of

Bhutia Basti, varied in size from 2 feet in height and 1 foot in

diameter to 8 or 9 feet in height and 3 to 4 feet in diameter. In the abovo monastery I saw m all 12 small barrel-shaped prayer whoels seven on the left while entering and five on the right. In the verandah on the right I saw a large wheel, which one would rather call a machine The worshipper on entering into the monastery at first turned all the twelve small wheels outside. He had simply to give a push to the wheels which then turned round for a number of times. He then thought that he had as it were recited a number of prayers. He then went up the verandah and began to turn the huge wheel there This was no light work A weak person cannot do that easily The wor shipper sat himself down and then catching hold of a large strap attached to the wheel began to pull it. Thus the wheel turned from right to left. The movement which one has to mvo to the body while turning it is like that we observe in a person turning a grinding mill in our country. As by long working at the grinding mill one exhausts himself so one can exhaust hunself in the case of these prover machines. I think the work at these have machines is beavier than that at a grinding mill I was touched at the devotion with which a pious old woman turned such a large prayer wheel at the beautifully-situated monastery of Ging. The woman, I was told was wandering from monastery to monastery to seek her heaven depending upon the charity of the monasternes for her board and lodge which were always free for such pilgrim travellers.

These big machines had at the top, two small stacks or pegs, projecting about two or three inches from the outer surface of the barrel. In the revolution of the barrel these projecting pegs struck two small bells that hung from the ceiling. The bells give a sonorous sound, which gave as it were a selemin harmony to the movement of the wheel and produced a kind of rade number which however rude added to the eleminty of the religious place in a sequestured corner of wild nature.

These Prayer wheels are often decorated. The projecting parts of the axis of the wheel are decorated with coloured cloths.

Again, the barrel of the machine is painted with various gaudy colours which we often see on some of the temples of our country

Besides these wheels of different sizes which are seen in the monasterics, one sees smaller prayer-wheels The mystic Om in the hands of Lamas and also in the Manı, &c hands of laymen of both sexes going about for their ordinary business purposes, they carry these small wheels in their hands and turn them with a view to acquire mentoriousness at all times While turning these, they often repeat the sacred words "Om! Mani Padme Hung!" ? e. "Hail Jewel (Lord of Mercy) in the Lotus-Flower" 1

According to Col Waddell, these words are believed to be "the mystic spell" of "the most popular of all the divinities of the later Buddhists, namely, the "Lord of Mercy" (Aralokita, in Tibetan Chan-ra-zi), who is supposed to be a potential Buddha who relinquished his prospect of becoming a Buddha, and of passing out of the world and existence into the Nirvana of extinction, in order to remain in heaven, and be available to assist all men on earth who may call upon him to deliver them from earthly danger, to help them to reach paradise and escape hell" The Tibetans believe that all "these three great objects" are "easily secured by the mere utterance of the mystic It is not even necessary to utter this spell to secure its efficiency The mere looking at it in its written form is of equal benefit Hence the spell is everywhere made to revolve before the eyes, it is twirled in myriads of prayerwheels, incised on stones in cairns, carved and painted on buildings, as well as uttered by every lip throughout Tibet, Mongolia, Ladak, and the Himalayan Buddhist States down to Bhotan, and from Baikal to Western China 2"

<sup>1 &</sup>quot;Lhasa and its Mysteries" by Dr. Austine Waddell (1905) p 29 Vide also Dr Waddell's "Buddhism of Tibet" pp 148-14

2 Col Waddell's "Lhasa and its Mysteries" p 29 The first word Om (AI) of this mystic spell is used in India as a kind of magic word or amulet It is inscribed on books and tablets. I have seen it even in the Gujarati inscription of a Parsee tablet in a dharamsala erected at Sanjan The Dharamsala was first erected by the late Mr Vicaji Taraporewala, a Parsee, celebrated in all the country round Tarapore, and, at one time, much known in the court of the Nizam Having fallen into ruin, a new one is erected. The tablet of this Dharamsala begins with the word

I have seen these mystle words written on side rocks, at several places on my way to Sukhispuri and Rangarcong. This is their most scored prayer. It is like the Bi smillah prayer of the Maho medans the Yatha Ahu Varryo of the Zoroastrians, the Pater Noster of the Christians. When at Darjoelling on many a morning at a very early hour I heard from my bed room the low muttering volce of a Bhuta man or woman passing along the road reciting this prayer and turning his or her wheel.

The word Mani in the above short prayer which is generally inscribed on the prayer wheel and with the recital of which a Tibetan turns the wheel has given to the wheel its ordinary name of mani 1 The Tibetans know this wheel by the name of K orle 2 This wheel is always to be turned from the right to the left

It is said that besides the machines of various sizes standing in the monastenes, and the small portable ones carried by the religious minded which we generally see in and round about

Darjeeling there are many of different eiges that are creeted on the tops of mountains, and over the currents of rivers 2 where turning by the force of winds and of the running waters they repeat by their movement the prayers inscribed over them and are believed to bring morit to the pious erectors and good to the world round about. Some prayer wheels are creeted over fire-places so that they may turn by the accepting currents of heated air 4. In Tibet oven ordinary houses of a somewhat richer class of persons have a row of barrel-thaped prayer wheels so tup in a prominent part of the building where it can be easily turned by the immates or the visitors of the house.

I loul p. 360.

When one had no work to do he turned the wheel. Itinerant surgers carried these prayer-wheels and turned them while singing -

Dr Widdell speaks of the use of a kind of prayer-wheel in Tibet the like of which I have not seen in Darjeeling. It is "a stationary praying-wheel, which is turned like a spinning-top by twiring its upper stem." (For the figures of this prayer-wheel and the smaller hand wheels, ende the figures at the commonorment of this paper. I am indebted to Dr Waddell's excellent book for the e figures.)

People curred and turned these prayer-wheels even while riding Dr Sven Hedin speaks of two old Lamas, who "as they rode meessantly turned then Korlehs, or prayer-wheels, mumbling Om manch padmeh hum! without for one moment tiring, their voices rising and falling in a monotonous, sleepy singsong (" The smaller prayer-wheels are placed on the outer side of the monistery, so that, even when the monastery is closed, worshippers can go there and turn them Rai Saiat Chandra Das Bahadur speaks of a monastery which was deserted, but still it was at times visited by women for "turning the prayerwheels outside the temple" 5 While speaking of the eastle of Diba Dongtse, he says "Around this (the central court-yard), on the sides, the building is 10 feet high, and has three stories, along the outer edge of which, on the court-yard side, are rows of drum-shaped prayer-wheels two feet high, and as much in diameter, that take the place of railings "6 At times, they were placed in the passages of palatial residences of cardinals, like that of the Potala, the palace of Delai Lama, where people turned them on their way to and back from the residences.7

## A FEW TIBETAN CUSTOMS AND A FEW THOUGHTS SUGGESTED BY THEM. THE PRAYER-BEADS OR ROSARIES

(Read on 26th November 1918)

President-Lt Col. K. R KIBTIKAB, LMS (Retd.)

In my two preceding papers on Tibetan oustoms read before the July and September Meetings of the Sourty I dwelt on two of the Prayer machines of the Tibetans seen in Darjeeling sus Prayer flags and Prayer whools To-day I want to speak on Pmyor beads or Rosaries the last of the three divisions in which I divided the Prayer-machines. We are more or less strangers to the Prayer-flags and Prayer wheels but not so to the Prayer beads or Rosaries which form a part of the parapharnalla or apparatus of the places of worship of many religious communities—the Hindus, Buddhusts, Mahomedans, Zorogstrans and Christians.

The instruments of ritual in a Tibetan Monastery or as Mon. L. De Milloné speaks of them, the utenals of worship hre various. Among these the reservoir or the chaplet is one of the most important. They call it Tonva. (Prenba lit a string of beads) During the course of the ritual, it is generally placed on a low wooden platform on the left of the officiating Lama who occasionally lifts it and turns its beads. Colonel Waddell gives an interesting and exhaustive description of the Tibetan reserve.

<sup>1</sup> The Buddhism of Tibet or Lameism, p. 402

<sup>1 &</sup>quot;Ustoradios du colta " ("Bod Youl ou Tibot par L. Do Milloué (1905) p. 52. " Houf p. 33. " The Buddhism of Tibet or Lamaism" by L. 1. Woldell (1895) pp. "02-10.

I produce before the Society, a rosary, which I purchased for 12 annas from a Bhutia at a house in the village of Bhutia Basti. In itself, it is not worth that price, but its owner parted with it with some hesitation at that price, because as he said, it had the additional value of being consecrated by a pious Lama. The house-wife did not part with hers, with which she had said many a prayer before the household altar, whereat all the arrangements were well-nigh of a kind similar to that of the altar of the monastery, though on a very small scale

The number of has two additional strings, each of 10 beads, beads which act as counters Every time the 108 beads are turned, one of the beads of the first counter, which marks "units", is turned to note the recital of 108 repetitions. That string has, at its end, a doingé which, representing a thunderbolt, serves as a symbol of authority in the hands of the Lamas, and which has, as such, given its name to Darjeeling,

which means the seat of the dorjé or the ecclesiastical authority. The second string marks dozens, i e, on the recital of  $12 \times 108$ 

prayers, one of the beads of this second string is turned. This second string has a small bell, called drilbu, attached to it

Several reasons are assigned for the fact of a Tibetan rosary containing 108 beads. I One is, that, the names of two of the Tibetan gods, whose names are told on the rosary, are 108.

2 The second reason is that the number of the volumes of their Kâgyur, one of the two divisions of their scriptures, is also 108

3. The third reason is that the footprints of Buddha contain 108 sub-divisions. So, the number of beads, symbolize, as it were, all these sacred facts. 4 It is believed by some, that the number 108 was borrowed by the Tibetan Buddhists from India, where the Vaishnavas have a rosary of 108 beads. 5 Colonel Waddell assigns another reason. He says—"The reason for this special number is alleged to be merely a provision to ensure the repetition of the sacred spell a full hundred times, and the

oxtra boads are added to make up for any omission of beads through absent-mindedness during the telling process or for actual loss of beads by breakage, 1

The meterials of beads

The materials of which the beads of a rosary are made vary according to the god or gods in whose honor or with whose name or names the prayers

are repeated. The materials generally used are crystal turuuoise 3 wood smber coral, hone conch-shall, etc.

The Tibetan Buddhists attach a good deal of importance to the bones and skulls of their Lamas especially to those of pious Lamas, and use them for various purposes. The thigh bones and the leg bones are used for trumpets. The skulls are used as bowls for drinking purposes. Other bones are used for making beads of their reseries.

I remember a morning (22nd June 1013) when, on my way to Rangaroong about 8 miles from Darleeling

Itinerent Lames se roving monest-OFFICE

I met two begging Lamas on the road. I also remember having met one such Lama one morning on my way to Lebong. These itln-

crant Lamas were as it were roving monasteries in themselves that is to say they carried over their body almost all the requi sites required in a monastery for ritualistic purposes. They carried the following articles on their bodies -

- 7 A drum
- A bell (drilbu)

<sup>1</sup> The Buddhism of Tibot or Lamaism. p. 203. 2 Ibid, pp 150-151

<sup>3</sup> Turquoise, so called, because it first went to Europe from Turkey was known in Tibet from olden times. It was known in Persia as persuces (دنروزة) since the 7th Century From there it came to India and from India it went to Europe vid Turkey Veds Mr B Lamper a laterest ing article on Turquoise in the East in "The Field Museum of Natural History Publication, 109 Anthropological Scree Vol. VIIL"

<sup>4 &</sup>quot;Of the skull he maketh a gobiet, from which he and all of the family always drink dovoutly to the memory of the deceased father (Friar Oduric, "Cathay and the way thither by Yule revised by Cordier (1919) Val. II. p. 2.1

- 3 A dorjé or dorche, an instrument with two knobs at both the ends It represents a thunderbolt which is an emblem of power. Often, it resembles a sceptre.
- 4. A rosary in the hand
- 5. A Prayer-wheel (k'orlo)
- 6 A conch.
- 7. A flag. At times, the flag was put on a long stick, which also acted as a hill stick
- 8 A rosary on the neck like a necklace 1
- 9. A trumpet made of a thigh bone.
- 10. A spear-like instrument (p' ourbon).
- 11 A mitre on the head.
- 12. A trident <sup>2</sup>
- 13 A Prayer-book

Of all the instruments, the bone trumpet drew my special attention. One of the Lamas said, that it was made out of the bone of the leg of a prosaries, trum pets, etc.

The use of bone in rosaries, trum pets, etc.

provide the provided souls of the Lamas, instead of being offended,

were pleased at the use of their bones for musical instruments

 $<sup>^1</sup>$  Dr Sven Hedin, in his description of these wandering Lamas, refers to these rosaries on their necks. (Trans-Himalaya, Vol I p 362)

<sup>2</sup> The mention of a trident among the Buddhist instruments of worship may strike one as strange. But one must know, that the latter day Buddhism and especially the Tibetan Buddhism has been a strange mixture. The early religion of Tibet was known as Bon religion. It was in the 8th century, that Padma Sambhava introduced Buddhism into Tibet. This Buddhism is also known as Lamaism. It is a corrupted form of Buddhism. One sees in it, together with the outward Buddhistic symbolism, a mixture of Shivaistic element and of pre-Buddhistic superstitions, wherein, as said by Rai Sarat Chandra Das Bahadur, fantastic devils and demons and their rites and sacrifices take, an important part. The pre-Buddhistic blood sacrifice also continued to a certain extent.

On the Buddlust altar on the Observatory Hill at Darjeeling, one sees a number of Hindu tridents. Again, among the numerous worshippers at this altar, one sees a number of Hindus, especially the Shaivites. Not only that, but the priest who looks after this shrine is a Hindu priest, and it is under his guidance that both the Hindus and the Bhutia Buddhists present their offerings, and it is under his presence that the Lamas say their prayers

during the rituals. Colonel Waddell refers to such thigh bone trumpets.\(^1\) M. Bonvalot also refers to blowing into human thigh-bones with leather begs at the end.\(^2\)

It is not only the Lamas in the monasteries that use the reserves but all the religiously inclined Bhutias male and female also use them. It is not unusual to see many a Bhutia on the hill or in an adjoining village, moving about with reserves in their hands and turning the beads while reciting their prayers.

As said by Colonel Waddell, even pediars and traders—produce all sorts of things for sale with one hand—while they devoitly finger the beads of their resery with the other—3 M. Bonyalot refers to some sanctimonious old lamss—quickly turning—mills or telling their beads—in the midst of ordinary work.4

Mr G Clarko Nuttal in his interesting article on Tho Rosary and its History's says. It (resary) is a link with the days behind History its origin is lost in the mists of the dawn of

civilization m the Far East and though many now fool it is a hindrance rather than a help to their devotions it has un doubtedly played a definite and real part in the chief great religious that have moulded the minds of men.

It seems, that in many religious communities, extain prayers had to be repeated several number of times.

The origin of the use of a Reserver for several reasons.—

At one time, as in the case of the philosophy of Pythagorus numbers were believed to have certain efficacy. So certain small

prayers, or prayer-formulæ were required to be recited a number of times, say a hundred or a thousand. That was to be done in the midst of their longer prayers

I would illustrate, what I have to say on the subject of these repetitions of prayers, by instances from the prayers of my own community

- a A Paisce has to recite in the midst of his larger prayer of Ahmamazda Yasht, 10 Ahmawars or Yathâ-Ahm Vanyos
- b In the midst of the iceital of the Vendidâd, even the fast recital of which takes at least about six hours from midnight to morn, at one place in the long service, the officiating priest has to recite 200 Ahunavais and 100 Ashem Vohus
- c In the recital of the Yaçna, in the paragnâ or the preliminary part of the service, the officiating priest has to recito the 100 names of Ahura Mazda 10 times

All these recitals would require some mode of calculation and some instruments for counting

Inespective of the belief in the efficacy of numbers, certain prayers were enjoined to be repeated, on account of their own efficacy. For example, a Parsee is asked to repeat his Vispa Humata prayer three times, his Nemo-âonghâm prayer four times. That seems to have been enjoined for the purpose of the efficacy of the prayers themselves

3 Certain long prayers had to be recited during the different parts of a day, of a month, or a year, or on particular occasions At times, people did not know these prayers by heart They even

<sup>&</sup>lt;sup>1</sup> This short prayer can be rendered thus —

<sup>&</sup>quot;I would entertain good thoughts, good words and good actions with my (\*e\*, as enjoined by my) reason. I would not entertain evil thoughts, evil words, and evil actions with reason. All good thoughts, good words and good actions lead to the best (state of) life (or paradise). All evil thoughts, evil words and evil deeds, lead to the worst (state of) life (\*e\*, Hell). All good thoughts, good words and good actions are apparent (\*e\*, have apparent efficacy).

did not know to read thom. In that case, they were enjoined to recite shorter prayers a number of times in lieu of the long prayers. For example a Parsee who did not know the Khorshed and Meher Nyhishes, in honour of the Sun and Mithra, the Yazats of Light which he was enjoined to recite three during the three gats or periods of the day was allowed to recite so many Ahunavars or Yatha Ahu Vainyte in their stead. The recital of these short prayers a number of times,—at times twelve hundred, for example in the case of the non-recital of the Gathas on the Gatha Gathambar days, required a counting machine or instrument like the resary

Thus, we see that reserves or chaplets first came to be used to count up the number of prayers that were enjoined to be recited a number of times.

The above view of the case is supported by what the emissarice of the Pope who want as missionaries under St. Francis Xavier to Japan in the sixteenth century said. They said "The Japanese pray on beads as we do those who can read use little books, and those who pray on beads say on each boad a prayer twice as long as the Pater Noster: This fact shows that those who knew their ordinary prayers recited or read from books. They had no need of resaries. But it was only those who did not know the ordinary obligatory long prayers that required the help of resaries to say short prayers which thoy were expected to know by heart.

Thus the principle underlying this process seems to be this At first it was enjoined by the priest that the worshippers had to say certain prayers either as atonoments for orimes or for removal of certain difficulties, sucknesses or calamities or for the fulfilment of a certain desire. At times, the worshippers did not know these prayers by heart or did not know to read them from the prayer books. In such a case the priest enjoined as substitutes the recitation of shorter prayers or short prayer

<sup>1</sup> Quoted by Mr C. Nuttal, in " Great Thoughts of February 1911, p. 359

formulæ a number of times. Thus, the Zoroastrian Mobad enjoined the recital of so many Ahunavars, the Christian Padre of so many Pater-Nosters, the Buddhist Lama of so many Om mani padme hum, the Hindu Brahmin of so many mantras, the Mohamedan Mullah of so many kalamâs

This is the first stage in the evolution of what we would term the "shortening process". For long prayers, short were substituted and enjoined to be said so many times

Then we come to the second stage There were many who did not know even the short prayers, enjoined to be said in lieu of the long ones whose recital was impossible for them. They, proceeding in the downward line of the shortening-process, rested satisfied with the recital of only the first words of the Prayers For example, instead of reciting the whole of the Om mâni padme hum, a Tibetan remained satisfied with the utterance of the first word Om

The most common use of beads in players among the laity in some religious communities seems to have crept in at this stage. Some means to count the number of prayers—the Ahunavars, the Pater Nosters, the Om mani padme hums, the Mantras, the Kalamas, were to be found. The beads supplied the means

Then came another stage, where even the recital or repetition, of any scriptural word whatever, was dropped, and simply the turning of beads was continued as a part of one's religious life. Hence it is, that we see many a religiously inclined person turning his beads in the midst of other work, or even while moving about

Again, it must be noted that this shortening process did not remain confined to the illiterate or to those who did not know their prayers. Others, who were in a position to say their long prayers also began to resort to this shortening process. Thus the use of beads or rosaries seems to have come into greater use in what may be known as the shortening-process or the substitution-process in the recital of prayers.

These processes have as it were their parallels in other kinds
of substitution process of which we find
Substitution process
many instances in various communities. For
example, it is mentanous to give board and

example, it is mentionous to give board and lodging to travellers and to supply them with horses for going, from one stage to another. So in China, people going on tops of hills or mountains, throw paper tents, paper horses and paper articles of food down below with the belief that by being wafted all round, they may bring them the mentoriousness of the charity of free lodge and board for travellers.

It is said, that in China if the drigs named in some medical man's prescriptions are not to be had, some burn the prescriptions and dissolving the resulting ash in water drink the solution believing that the efficacy of the drug is thereby transferred to the vater.

I had the pleasure of seeing a Chinese temple at Calcutta on the evening of 3rd July 1913. I saw there a number of coloured papers containing short Chinese prayers. The worship per purchased these papers and burned them believing, that with the rising smoke the prayers written on the papers ascended on his behalf to the high Heavens. It is with such a similar idea of the substitution-process that they either hurn paper-horses and articles of food or fling them into the air believing that thereby they provide animals of transport and articles of food to travellers and thus collect for themselves in the Heavens the mentonousness of giving hospitality to travellers. I produce before the Society here a few prayers purchased at the above Chinese temple

Mumber of bests among other communities, the number of beads in the resurries varied

1 The Buddhist resary has 108 beads with two strings each of ten beads, one counting the units and the other the decens.

- 2. Among the Brahmins, the Vaishnavites like the Buddhists have their rosaries of 108 beads, but the Shaivites have those of sixty-four
- 3 The Mahomedans have rosaries made of three chaplets, each of 33 beads. These 99 beads are turned with the recital of each of the 99 names of God. There is one bead extra, the hundredth, which represents the name of God himself.
- 4 The Christian Catholic rosaries consist of 150 small beads with ten large ones at the interval of every 10 beads. They are turned at each recital of Ave Maria, i.e., Hail Mary. After the recital of every ten Ave Maria prayers they recite one Pater Noster, whose recital is noted by the large bead placed after every group of 10 small beads. The number 150 represents 150 Psalms. It was the duty of the prous to recite, or read during the course of every day these 150 Psalms. But in the early days of Christianity, there were hundreds and thousands who neither knew their Psalms by heart nor knew to read them. So, they were enjoined by the priests to recite one Pater Noster or Lord's Prayer—a short prayer which could be easily committed to memory,—for every Psalm which they could not recite. Hence, it was to count these Pater Nosters that the rosaries first came into use among them
- In those early days, the Knights who formed religious orders—for example, the Knights of St John—were, to a certain extent, illiterate, more illiterate than the clerks or the clergy So, when the latter were, as a matter of course, required to recite the 150 Psalms, the Knights, not happening to know them by heart or to read, were required to repeat 150 Pater Nosters in their stead. In order to be able to do so properly, they had to carry with them resarres
- 5 The tashth or rosary which a Parsee priest uses for counting the 200 Yathâ-Ahu-vanyos, and 100 Ashem-vohu prayers during the celebration of the Vendidad (Chap XIX) is made of 100 beads

We find that in many cases at is the first words of the short

The first words of prayers given prayers which the reserves enumerate, the names to reserve.

As you would be a supply to the reserves.

- 1 The old name of a Christian recary is Pater Noster which forms the first word of the Pater Noster prayer recited with its help Those who made resames were called Pater Nosterers. The Pater Noster Row in London is and to have derived its name from the fact that the old Pater Nosterers manufactured their Pater Nosters or reserves there.
- 2 The Mahomedans called their reserves tashib (﴿

  \$\frac{1}{2}\text{-1}\$) from the fact that their most mentonous ejaculation,
  Subbâna illâh! (s.e. I extol the holmess of God!) or
  O Holy God!) was known as tashib. This epaculation
  if recited one hundred times, night and morning, is said by
  the Prophet to atone for man sains, however many or great,
  Fide Mishikât Bk. X ch. H. 1

The recary is also spoken of as subtah (Ales) among the Mahomedans. It consists of 100 beads, and is used by them for counting the 09 attributes of God together with the essential name Allah (God) or the repetition of the taskih (Oh! Holy God) the Takmud ("Praise to God") and the Takhur ("God is Great!) or for the recital of any act of devotion? The Mahomedans use resaries in their rates (Sol) his remembering which is a "religious caremony or act of devotion practiced by the various religious orders of Faque or Darwenhes. 3 Modi station holding breaths for a long time and dancing are included in these practices.

3 The Zeroastrians of India use for resary the Arabic word tastiff which seems to have come down to them through the Porsians But the Zeroastrians of Persia use the words Band i

<sup>1</sup> Hughes Dictionary of Islam; sade the word Tashih

t Dictionary of Lelam, by Hughos (1885) p 516. Fade the word

<sup>3 1</sup>bid, p. 700. I see the word rain

Yathà Ahu Vairyô (lit the knot of Yathà Ahu Vairyô) for their rosary Heie also, we find, that the words Yathâ Ahu Vairyo, which begins the Yathâ Ahu Vairyo prayer, recited a number of times, have given its name to the Zoroastrian iosary. It is said that the beads of this rosary are made of knots of fine woollen thread. It is made up of 100 or at times 1,000 knots. Now-adays the Persian Zoroastrians have also begun using glass beads which they call Mohreh (8).

In some communities, then words for the rosaries explain the purposes for which they are used. For example, among the Ceylonese Buddhist monks, a rosary is called Nawaguna Mâlê, i.e. a string or garland for counting the nine virtues. "Similarly, in modern Persia, a Zoroastrian speaks of his rosary as a "Band-1-Yathâ Ahu Vairyo, i.e., the knots (w) for counting the Yathâ Ahu Vairyo prayers

We have no authentic account of the use of rosary in ancient The Parsces have no original word in the Avesta, Pahlavi or old Persian for a rosary The word they use for it is, as said above, the Arabic word (tasbih) used by the Mahomedans Another word which they use for it is hârdi (&left), which is Gujarati and which literally means (beads) arranged in a row  $(h\hat{a}r)$  The use of these foreign words shows that they had nothing like losaries at first. Its use came in afterwards from other communities. We do not find the word tashih in the old Persian dictionary Burhân-i-Kâteh This also shows the later use of the word by the Persians and the Parsees course, they had, like other religious communities, to recite some short prayers in the midst of the ritual for a number of But the number of recitals was not unusually long It was 200 the most in the Vendidad But latterly, a larger number began to be enjoined for recital in lieu of several long prayers It is then that its use seems to have been intioduced

<sup>&</sup>lt;sup>1</sup> Col Waddell, Journal of the Royal Assatic Society, 1896, p 576

We find that many an article first used lot religious purposes

The use of the Roszy as an ar ticle of dress.

The Use of the Roszy as an ar of tolet or dress. The Cross is an instance of this kind. It was as it were transferred.

from the Church to the body of the votaries of the Church at first, as an amulat or a thing of religious efficacy. It then gradually formed the part of the dress and began to be used as a decoration in the safe-guard of a watch or in a brooch on the neck, etc.

I have seen in Italy and especially in Naples during my visit of the country in July 1889 many an Italian lady and gentleman carrying on their body in some form or another as decoration articles of ancient phallic worship especially those found in the ruins of Pompel or Hercules

The same is the case with the resary. It has passed from the Church to the dressing room as an article of dress on the neeks of ladies. It is so in Thot and elsewhere. The present dânâ roks sânkri (d-11212 til 51) s.s. the grain-shaped neeklace hanging from the neek of many a Parseo or Hindu lady seems to have evolved from the original use of the reserve as an article of decoration. One speaks of a moli si mald i e a pearl neeklace on the neek of a lady and radia pahpri or faravvi i e. to turn a string or resary. The latter phrase has proverbially come to mean to say prayers. The word mald is common in both the phrases

Mr Nuttal ways of the Christians, that the use of reserves for personal adormment was, later carried to such an extent that its religious office was in danger of being forgotten. So the Church exerted its influence to put an end to this unbecoming state of affairs and in the fourteenth and filteenth centuries we find various laws passed against this abuse by the ruling bodies of different Continental towns. Thus Yuremberg forbade its citions to use any Pater Noster of above a certain value, while somewhat later Regensberg put a limit (namely three or four) to the number of reserves when a single individual might

possess, and, moreover, limited the value of each of those to ten guelden." Though latterly rosaries began to form a part of the dress, the grains which formed them continued to be spoken of as beads, which was originally a religious term, derived from the word "bidden" to pray.

The rosary has given a name to one of the Catholic feasts, viz "The feast of the Blessed Rosary"

We find, that in many religious communities, flowers, or some vegetable products, at first, formed the beads of reseries

beads of reseries

Other materials came to be used latterly. As flowers play an important part in the religious services and ritual of many communities, it is natural that they served as beads at first. The very words for reseries in most languages seem to prove this fact. Col. Waddell, says of the Burma Buddhist reseries.—

"Among the Buddhists of Burma, the rosary is known as Tsi-puthi" which literally means 'the mind-garland,' i e, the meditation rosary....It consists of 108 beads, corresponding, it is alleged to the 108 symbols in Buddha's sole or foot-prints....A most rare and costly rosary found occasionally among the wealthy lay devotees is formed of compressed sweet scented flowers, pressed into cakes of a wood like hardness and then turned on a lathe into beads. Such beads retain their perfume, it is said, for ages. This is the nearest approach to the more primitive rosary, viz, a garland of flowers" 2

Again take the English word "rosary." It originally meant a "rose-bed" The German word "rosenkranz" similarly means both, a "garland of 10ses" and a "rosary" The Sanskrit word for a rosary is (भारा) mâlâ, which means a garland of flowers as well as a rosary Our Indian word mâlî originally

<sup>&</sup>lt;sup>1</sup> "Great Thoughts" of February 1911, p 360

<sup>&</sup>lt;sup>2</sup> Dr Waddell, Proceedings of the Asiatic Society of Bengal, December 1892, p. 190.

means a garland maker Again the Indian word (n) hâr when used in connection with flowers means a garland of flowers, but as hârds (a15) it is used by Parsecs for a rosary So all these words indicate that, at first beads were made of flowers or some such garden productions.

Ratering into the mists of the dawn of osvilization' while tracing the origin of the use of resary, Mr Nuttal begins with the Brahminio faith and says —

The falling tears of Siva became transformed into the rough bernes of the Rudrakaha tree. So the Hindoo had his resary of Rudrakaha bernes to ald him in his petitions to Siva the terrible or a resary ont out of the wood of the Tulsi shrub to assist him recite the praises of Vlahnu the preserver. To this day the Brahmin believes that abstraction—detachment from the world around—is best attained by counting and repetition so he still uses his Siva resary of sixty four beads, and his Vishni resary of one hundred and eight beads to attain the desired attitude of mind by endlessly reiterating his invocations over it. <sup>12</sup> This shows that in India also flowers or plants served as beads.

Colonel Waddell says of the Ceylonese reseries that "the material of which the beads are composed varies with the wealth and caprice of the owner. The commonest reseries have their beads of occeanut shell or of a seed. Some reseries are of Sandal wood, and a few are of precious stones. But no importance seems to be placed upon the particular material of the beads, as is done in Tibet where the resery has attained its highest development."

Air Nuttall relates the following interesting legend which is

A Christian legend about the first use believed to have introduced the use of the order losser words, resery for a Pater Noster'

<sup>&</sup>quot; "Great Thoughts" of February 1911 p 3.2.

Journal of the Royal Asiatic Society of London for 1898 p. 576.

"A certain pious lad found his chief delight in making a wreath of flowers-roses for choice-to adorn a figure of the Virgin This he did until he entered the Cloister as a Monk, when to his grief, he found that henceforth it would not be possible to continue his offering. But an old priest to whom he told his trouble advised him to repeat fifty special 'Ave Marias' every day and offer this exercise to 'Our Lady' in heu of the flowers. She would know and understand his motive and accept his offering. This advice the young novice followed most faithfully. One day his duty took him through a wood where robbers were lying in wait for him. As they watched a favourable opportunity to attack him, they saw him suddenly stand still and repeat his customary Aves. To their surprise a beautiful vision of a woman took the prayers as they fell from his lips, each prayer being changed into a lovely rose, and she wove them into a garland or rosary Needless to say, this sight' convinced, the robbers of their sin and converted them to a better life" 1

Mr. Nuttall also gives another tradition about the origin of the name 'rosary'. He says "A favourite appellation of the Virgin Mary in those days was Rosa Mystica, and since the old Pater Noster had become by this time almost exclusively used in the glorification of the Virgin, it was more aptly termed a Rosarium or Rosary than a Pater Noster"<sup>2</sup>

The use of the rosary seems to have come down to the

Buddhism giving the use of reseries to others Tibetans from their own ancient religion the Bon religion—in a synod of which even Persia and India had sent their sages, and whose many practices they have preserved in

spite of their Buddhism. According to the teaching of that religion, the rosaries varied in form and colour according to the degree of meditation and according to the kind of offerings 3

<sup>1 &</sup>quot;Great Thoughts" of February 1911, p 156

<sup>2</sup> Ibid

<sup>&</sup>lt;sup>3</sup> Bodh-Youl ou Tibet, par L de Milloué, p 156

Buddhism confirmed its use. India knew the use of resaries from very ancient times

It is said on the authority of Abdul Haqq a great commentator that the early Mahomedans counted their prayers in praise of God by the use of pebbles.

Mr T P Hughes the author of the Dictionary of Islam 1 thinks that it is probable that the Mahomedans borrowed the use of reseries from the Buddhust, and latterly during the Crusades, gave it to Christianity through the Crusaders. Its use is said to have been introduced in Christianity in A.D 1221 by Dominic the founder of the Black Friars. It is said of an Egyptian secetic named Paul of Pherma who lived in the fourth century that when ordered to recite 300 prayers, he counted the prayers with 300 pebbles which he had proviously collected. He threw out the pebbles, one by one, at every prayer?

This, in my opinion, explains the use of the pebbles in the Vendidad, recited during the Mrangdin ceremony of the Parsees wherein at the end of the recital of 200 Ahunavar, pebbles are thrown on the recital of each Yatha Ahu Varyo in the vessels containing the seared guo-mes (urine) and water

The Lamas often use their resumes to drive off the evil spirits.

On the morning of 4th June 1913 I har-

The Thetan reasy used as a pond to be in one of their annual devil-driving in grocessions, wherein they carried all the strument books of the monasteries through the village

believing that the carrying of religious books through the shoets exercised the ovil spirits. In the march of the procession, the head Lama often flourished his resary round about to drive away devils from the village.

## TIBETAN SALUTATIONS AND A FEW THOUGHTS SUGGESTED BY THEM.

(Read on 28th January 1914.)

President-Lt.-Col K. B KIRTIKAB, I.M.S (Reid.)

Salutations are of two kinds. I Oral or by spoken words and 2 Gostural, or by certain movements of some parts of the body. Out of these two heads the Tibotan salutations of which I propose to speak a little to-day fall under the second head, su. Gostural salutations.

Colonel Waddell thus speaks of the Tibetan mode of saluta-

Different travel lers on the modes of salutation. Col. Waddall.

tion. The different modes of salutation were curiously varied amongst the several nationalities. The Tibetan doffs his cap with his right hand and making a bow

pushes forward his left ear and puts out his tongue which seems to me to be an excellent example of the self surrender of the person saluting to the individual he salutes which Rerbort Spencer has shown to be at the bottom of many of our modern practices of salutations. The pushing forward of the left ear oydently recalls the old Chinese practice of cutting off the left ears of prisoners of war and presenting them to the victorious chief.

Mons. L. Do Milloué thus refers to the Tibetan mode of salutation (I translate from his French)

M. L. De Milloné. Politoness is one of the virtues of the Tibetan He salutes by taking off his cap

as in Europe and remains bercheaded before every person whom he respects but by a strange usage when he wishes to be particularly amable and polite he completes his salutation by two gestures which appear at least strange to us he draws the tongue rounding it a little and scratches his cars. When he presents himself before a superior he presents thurself mue times so as to touch with his forchead the wood flooring then drawing backward he seats lumself on the floor at

Col. Waddell's Lhaus and its Mysteries," pp. 127-24

the other end of the hall—If he addresses hunself to some Lama of high rink, after the strict prostrations, he remains on the knees, the head melmed down to the ground until asked to get up An indispensable element of the Tibetan politeness is the gift of a kind of scarf of silk called Khata (Khu-btags or dgaltag), " seaf of happiness". Two Tibetans of good company (position) never approach each other without presenting the Khata to each other If they are of equal rank then they are satisfied with a simple exchange of scarf. When an inferior is received by a superior, the first thing he does, after prostrating himself according to the etiquette, is to present respectfully a Khata, which the superior, whatever be his rank, receives with his own hand, then, at the moment when he takes leave (to depart), the high personage, in his turn gets a scarf placed by one of his men on his shoulders, and if he wishes to honour in a special way, he himself passes it round his neck. This usage is so mixeral, that one does not send a letter without joining to it a small Khata inside for that purpose

"These scarfs are made of a kind of gauze of very light silk at times united and at times loose. They are more large than broad and terminated at both the ends with fringes. Sometimes, the most beautiful (scarfs' carry, below the fringes, worked up in the stuff, the sacred formula of invocation, Om! Mani padmé Houm (O! the Jewel in the lotus. Amen!) They are always of a bright colour, especially white or red, preferentially white. They are made of all dimensions and of all qualities, and naturally the value of the Khata depends upon the rank of the person who offers and of the person to whom it is offered."

According to M Bonvalot, the Tibetan—" in order to salute us, lifts up his thumbs and protrudes an enormous tongue, while he bows profound-

ly." <sup>2</sup>

<sup>&</sup>lt;sup>1</sup> Bod Youl ou Tibet, par M L De Milloud (1906), pp 60 61

<sup>&</sup>lt;sup>2</sup> Across Tibet, being a translation of "De Paris au Tonkin à travers le Tibet inconnu," by Gabriel Bonvalot, translated by C B Pitman (1891), Vol. II, p 2

Further on, M. Bonvalot speaks thus of these and other similar expressions of approval. They express disagreement by joining the thumb-nails, and agreement by putting them just the opposite way Putting the thumb up means approval and saturfaction raising the little finger denotes hostility while to keep it in this position and at the same time to shake the head arguifles dislike. The two thumbs placed perpendicularly one above the other with the tongue hanging out denotes superlative approval". For an expression of thanks also the same form of salutation is resorted to M. Bonvalot says of a Tibotan - He thanked us offusively with uplifted thumbs and protruding tongue for all the presents we had given him and when we gave him back the meat he prostrated himself 2

Dr Sven Hedin also refers to the common Dr Byen Hedin. mode of sainting by protruding the tongue 2 At first this mode seemed to him a mockery 4 He also refers to the custom of taking off the cap while saluting That was done with the left hand when they at the same time scratahed their heads with the right one 5 In the nudst of their conversation they often shot out their tongues from politoness and friendliness o He refers to another form of saluting, ruthat by rubbing foreheads 7

According to Rs; Sarat Chandra Das Bahadur in the Bardon district of Khams, " when two acquaintances Sarai Chamira meet they touch each others foreheads to-Dag gother by way of salutation. s According to Mr Rockhill the Editor of Mr Sarat Chandra Dass book.

this mode is also provident among the Mahomedans

loid, note-

Mr Sarat Chandra Das says further: "Among the Golog people it is customary to greet one another with a kiss, and whoever omits the kiss when meeting or parting with an acquaintance is considered rude and unmannerly" Mr Rockhill 2 has some doubts about the custom of kissing, which, as Mr Sarat Chandra Das himself says, is prevalent only among the Golog people and is held as "gross immodesty" at Tashilhunpo

W W. Rockhill. Mr. Rockhill 3 thus speaks of the mode of salutation in Central Tibet —

"In Central Tibet the salutation consists in sticking out the tongue, pulling the right ear, and rubbing the left hip, making a slight bow at the same time .... Throughout Tibet, to say a thing is very good, they hold up the thumb with the fingers closed, and say "Angé tumbo ré" 'It is the thumb,' ie, it is the first Second class is expressed by holding up the index with the remark "Angé nyiba ré", and so on down to the little finger, which means that it is the poorest of all, "Ta-ma ré," "It is the last" 4

Mr Rockhill thus speaks of the mode of salutation in another part of Tibet, the region of Dre'Ch'u, the river of golden sands. "The mode of salutation among the people in this section of the country is novel. They hold out both hands, palms uppermost, bow with raised shoulders, stick out their tongues, and then say Oji, oji When desirous of showing respect to a person, or expressing thankfulness, they stick out their tongue and say Ka-drio" This mode of salutation by "holding out both hands, palms uppermost, and bending the body slightly" is prevalent among the Mongols also. "

<sup>&</sup>lt;sup>2</sup> Ibid p 197, note.

<sup>5 &</sup>quot;The Land of the Lamas" by W W Rockhill p 200.

<sup>\*</sup> Ibid, p. 146.

In another book of travels, Mr Rockhill speaks thus of the above-named mode as observed by him —

'The lower classes here when salutang superiors, are in the habit of bending the knee very low putting the right hand beside the right cheek and the left hand under the elbow of the right arm at the same time sticking out the tongue. <sup>1</sup> When they express immense pleasure they loll out the tongues as far as they can.<sup>2</sup> Mr Rockhill also refers to the mode of rubbing the forcheads. They kow tow or bow three times and then eroughing in front of each other make they hads touch.<sup>2</sup>

Summary of the

From the above accounts of the Tibetan modes of salutation, we gather, that the principal modes are the following —

- 1 The protruding of the tongue
- 2 Bending the head or making a bow
- 3 Scratching the head
- 4. Scratching the car
- 5 Removing the cap
- 6. Pushing forward the car either the left or the right
- 7 Raising the thumbs of the hand with the fingers closed
- 8 Prostration
- 9 Remaining on the knees with the head inclined to the ground
- 10 Kissing one another
- 11. Rubbing the hip,
- 12. Holding out both hands palms uppermost
- 13 Bowing with raised shoulders
- 14. Bending the body slightly,

## Summery of the

From the above accounts of the Tibetan modes of salutation, we gather, that the principal modes are the following —

- 1 The protruding of the tongue
- 2 Bending the head or making a bow
- 3 Scratching the head
- 4 Boratching the ear
- 5 Removing the cap
- 6 Pushing forward the ear either the left or the right
- 7 Raising the thumbs of the hand with the fingers closed
- 8 Prostration
- 9 Remaining on the knees with the head inclined to the ground
- 10 Kissing one another
- 11 Rubbing the hip,
- 12 Holding out both hands palms uppermost
- 13 Bowing with raised aboulders
- 14. Bending the body slightly;

<sup>1 &</sup>quot;Diary of a Journey through Mongolia and Tibet in 1891 and 189 p. 241.

<sup>\* 16</sup>id p. 240.

<sup>3</sup> Ibid p. 250.

- 15. Rubbing of foreheads.
- 16 Presentation of a scarf called Khata as a mark of politeness;
- 17 Remittance of letters with scarfs attached to them

At times, some of these modes are combined together and form one mode of salutation. At different places, at times, the same mode of salutation, for example, the protruding of the tongue, is a little varied. These different forms of salutations suggest to us several thoughts in connection with our known methods of salutation.

The first thing that draws our special attention, because we do not see the like of it in the salutations of other modern nations, is the method of thrusting out the tongue. According to Dr. Sven Hedin, they thrust out the tongue often, even in the midst of conversation as a kind of politeness 1

One of the cruel ways of punishment in olden times, especially by tyrants and despots, was to cut off one's ears, nose and tongue and even the head. So, by this way of salutation, the person, who saluted, said, as it were, to the person whom he saluted, that his tongue, ears, nose, etc., were at his disposal, and that he may cut them off if he liked. Col Waddell takes this form of salutation as an excellent example of self-surrender, referred to by Herbert Spencer, lying "at the bottom of many of our modern practices of salutation"

According to Dr Sven Hedin 2 and M L. De Milloué, 3 they at times scratched their heads and ears as symbols of salutation. What does this scratching signify? I think the signification is the same as that of the above mode, viz, the thrusting out of the tongue and the pushing forward of the ear. Dr. E. B Tyler, in

<sup>&</sup>lt;sup>1</sup> Trans-Himalaya, Vol I, pp 284, 435.

<sup>&</sup>lt;sup>2</sup> Trans Himalaya, Vol I, p. 15. 3. Bod-Youl ou Tibet (1906), p. 60.

then drops it, perhaps indicating thereby that he is prepared to let that head be cut off in obeying the legitimate orders of his superior

The military sainte on ceremonious occasions wherein the officers hold their swords before the Governor or Royal personage and the latter touch the swords, is another form of expression on the part of the officers, to again that their swords were at the disposal of their superiors. In one way they say that they are prepared to use their swords for all legitimate orders given by their superiors in another way they say that the superiors are at liberty or have the privilege to use the sword over them if they disobeyed their orders. In other words, in whatever sense you take it he offers his life through his superiors to the service of the State

The salutation of a lady is the next step in the ovolution of the shortening-process. She neither raises

Salutation of her hand nor even her finger but simply ladics. node. The form of splutation of an Indian

lady Hindu and Parsee, on caremonious occasions, seems to be an expression of a similar kind though not of the same nature. In the form of salutation, known among us as overna ( AigiRegi), she does not offer her head to you to signify respect or obedience She neither raises her hand or finger to her forehead nor nods her head, but passes her hands round your head and raises them towards her own forehead. In this process she does not offer her head to you but offers to take off your' head, all your difficulties and dangers griefs and sorrows Mark her self-excrisiong words on the occasion She says Tamara uparths mars jau ( તમારા ઊપરથી મરીભાઈ) s.e., I will die or I die for you Thereby she says that she is prepared to allowate your difficulties and greef and even to die for you for that purpose

The Masonic solutation in the First Degree wherein the salutor instead of passing his hand aside

from the forehead like a soldier passes it Masonie mintetions. numilarly across the throat is a surer indi

cation of that kind The modes of salutation to their deities, which I saw in the Tibetan monasteries at Darjeeling, as observed both by males and females reminded me, more than once, of some of the Masonic modes of salutation

The modes of salutation observed by the Tibetans in their "prostration pilgrimages" round their sacred mountains are worth noticing Dr Sven Hedin thus describes one of these prost-

ration pilgrimages -

"This consisted of six movements Suppose the young Lama standing on the path with his forehead held slightly down and his arms hanging loosely at his sides -(1) He places the palms of his hands together and raises them to the top of his head, at the same time bending his head a little down; (2) he lays his hands under his chin, lifting up his head again, (3) he kneels upon the grounds, bends forwards and lays himself full length on the ground with outstretched arms; (4) he passes his hands laid together over his head, (5) he stretches his right hand forwards as far as it will reach, and scratches a mark in the soil with a piece of bone, which shows the line, which must be touched by his toes at the next advance, and (6) he raises himself up with his hands, makes two or three strides up to the mark, and repeats the same And thus he goes round the whole mountain slow work and they do not hurry, they perform the whole business with composure, but they lose their breath, especially on the way up to the pass; and on the way down from the Dolma-la there are places so steep that it must be a gymnastic feat to he down head foremost One of the young monks had already accomplished one round, and was now on the second When he had finished, in twelve days, he intended to betake himself to a monastery on the Tsangpo, and be there immured for the rest of his life, and he was only twenty years old! We. who in our superior wisdom smile at these exhibitions of fanaticism and self-mortification, ought to compare our own faith and convictions with theirs The life beyond the grave is hidden ings upon the king and the other priests express approval and their association in the prayer by holding up their fingers. Firdous <sup>1</sup> also refers to the custom of expressing assent by raising fingers and placing them upon one seyes. The Parsees of India seem to have substituted the practice of holding up a flower im place of a thumb. Thus then, this ritual of holding up a flower during the prayer for the king, signifies the approval of the other members of the congregation.<sup>1</sup>

We saw above that the Tibetans present scarfs to one another as a form of salutation. I learnt at Dar-The giving of jeeling that when the Delai Lama was last maria. at Darjeeling for some months before his restoration to power at Lhasa even Parsoe visitors followed this custom when they paid him ceremonial visits of respect, What does that oustom signify? I think this oustom is a symbol or relic of the ancient oustom of presenting dresses to one another. When a friend from one city or town visited another they exchanged presents one form of which was the presentation of dresses. Latterly instead of full dresses small proces of cloths were substituted as a symbol. We know that even now in India when one speaks of presenting a vage (4131) or a suit of dress the presentation takes the form, not necessarily of a full dress but of dist (tikis) se, pieces of cloths The scarf seems to be a symbolic presentation of that kind.

We have seen above that friends exchanged scarls not only when they met in person but also when they exchanged letters. In fact the letters themselves were covered with such scarls. This seems to be a very old custom. We find that Firdousi refers to this outtom. When kings sent letters to other kings the letters were placed in handsome pieces of cloth The Indian custom of presenting shawls to one another on ceremonal occasions is connected with this old custom of presenting scarls.

<sup>1</sup> I have spoken at some length on this subject in a paper to be published in the Sir Jamshedjee Jejechhoy Zarthoshii Madressa Jubilee Volume which I edit.

At one time, there was a custom among the Parsees of India that one, who was for some fault excommunicated, gave, on readmission after an expression of regret, a small fine or a piece of cloth (alc) to the Parsee Panchayet This presentation of a piece of cloth seems to have some connection with the above custom of presenting scarfs. This was, as it were, an expression of respect towards the elders of the community.

## A DEVIL-DRIVING PROCESSION OF THE TIBETAN BUDDHISTS AS SEEN AT DARJEELING AND A FEW THOUGHTS SUGGESTED BY IT

President—THE AUTHOR OF THE PAPER

This is my fifth paper before this Society on the subject of my observations and study at Darjeeling Introduction, during my visit of the Hill Station in May June 1913 The object of this paper is to

(I) say a few words on the subject of religious processions generally and (II) to describe some Tibetan religious processions and especially the one that I happened to see at the gumps or monastery of the Bhutia Basti at Darjeeling, on 3rd June 1913

Ţ

Processions play a prominent part in the life of all nations, concent and modern They play a prominent part in many phases of their life all nations.

whether politious, social or political The

Church the State and the School are the principal institutions of a country or nation which govern and influence that country or nation and we see processions occupying an important position in all these three We know that the Church has its magnificand stately processions. In the Roman Catholic Church there is a book specially known as Processional which treats of religious processions. We know that the State has its processions. In monarchical Government, kings have their State or Court Processions. Even democratic governments have their processions. Coming to the third of the above institutions, via. the School, we know of academical processions. The Universities generally have their Convocation processions.

From the Church, processions have passed on to Society which has processions for various functions. We know of Marriage processions, Funeral processions and other kinds of processions.

Processions have come down to us as it were, from times immemorial. For example, looking to the Procession, an old lioary antiquity of ancient Irân, we find

Procession, an old Institution

Ahura Mazda himself represented as advancing with his anjuman of Yazatas or angels,<sup>1</sup>

as it were, in a stately procession to meet Yima or Jamshed who, on his part, advanced with the anjuman of the best of men. Both the processions met at the Vehedâiti river. Looking to ancient Greece, we find from a recent excavation in the island of Crete, that in the city-life of Knossn, which is believed to have existed before Troy, processions played a prominent part Dr. (now Sir Arthur) Evans excavated a corridor, which is called "the corridor of processions" from the fact that the fresco there represents a procession in which "a king in gorgeous robes and wearing a crown of peacock's feathers takes part" 2

Coming to later times, according to that great anthropologist, Dr Frazer 3, whose name we are Processions according to Frazer very glad to see in the Honors' List, published the day before yesterday, on the occasion of His Majesty's birthday, and whom we are all glad to congratulate, we find from what can be gathered from the works of Mediæval writers, that processions formed one of the three principal features. In the Midsummer Celebrations of their times and of the times anterior to them The three features were (1) Bonfires, (2) Processions with torches round the fields, and (3) Rollings of wheels

Coming to our own times, all of us have seen various processions, in connection with the Church, the State and the School

Religious processions among the modern Paraces.

Even now the Church is the principal institution wherein processions are very prominent. Among the modern Passees, irrespective of the ordinary marriage and funeral processions, what can be strictly called religious processions are

two -(1) The Navar procession and (2) the procession on the occasion of consecrating a fire temple

In the Navar 1 procession, a novice or immate for priesthood is taken to the temple for being initiated. In the second the sacred fire which is prepared and consecrated after several religious ceremonies? is taken in the form of a procession headed by Dastura and Mobads, some of them holding swords and maces (gars)" in their hands to the place where to speak in its technical phraseology it is enthroned

In connection with this Fire procession it is interesting, even for the present Parsees, to note that as late as about 400 years ago when the household fire which a Parsee was enjoined to keep burning with religious care was by some accident or carelessness extinguished the householder had to go to the house of a priest and to bring fresh fire from his house in the form of a procession. Mannuor trefers to this custom observed by the Parsees of Surat.

Among the Christians religious processions were generally connected with the saying of litanies or

Religious DEOecations among the Christians.

rogations are public supplications for appeasing God s wrath. They were resorted to when there prevailed in the city or country heavy storms, famines pestilouces and such other disasters

Formerly, on such occasions, people went about in processions offering penitential and intercessory prayers. Those who joined such processions generally fasted and clothed themselves in sack-cloth. It was Justiman who forbade that no such religious processions may be held without the bishops and their clergy. It was directed that crosses may be carried in these processions. During the pontificate of Gregory I, in 590 AD, the country was inundated and the mundation was followed by a severe pestilence. So Gregory I ordered "a sevenfold procession of clergy" (litama septiformis)1, which included the "laity, monks, virgins, matrons, widows, poor and children." At times, the word "procession" came to be equivalent with "litany". The object of all these processions or litamies was (1) invocation, (2) deprecation, (3) intercession and (4) supplication

The ancient invocations during these processions present a striking example of how the powers, that were once invoked as good angels, became devils at other times. In the time of Charlemagne, they invoked during these litames, Orihel, Raguhel and Tobihel as angels, but Pope Zacharias condemned them as demons and forbade their invocation.

## $\Pi$

Rai Sarat Chandra Das Bahadur describes a procession, where-

A Tibetan procession to worship the Emperor of China. in the Chinese Amban and Chinese and Tibetan officers, all went in the form of a piocession on the anniversary day of the Chinese Emperor's accession to the throne, to

pay homage to the emperor's image in a Tibetan monastry 2

The same author refers to processions of the monks, formed to welcome a Tibetan General and for other purposes wherein a band of gongs, tambourines, hautboys, drums, bells, fifes and clarionets are prominent <sup>3</sup> He also describes a New Year's

<sup>&</sup>lt;sup>1</sup> Encyclopædia Britanica, Vol. XIX, p 696

<sup>&</sup>lt;sup>2</sup> Journey to Lhasa and Central Tibet, p 60.

<sup>&</sup>lt;sup>3</sup> Ibid, p 80 and p. 95

procession, wherein a religious ceremony for throwing off the torma offering is performed.<sup>2</sup>

The religious procession in connection with a Tibetan monastery at Darjeeling which I propose describing was intended to drive away not necessarily demons of any prevailing epidemic or sickness but demons generally

Almost all the countries in the world believe in a kind of demons presiding over maladles and other calamities. But Tibet was a country where they most believed in a kind of demons existing everywhere. Hence the importance of devil driving processions there. To enable one to properly understand the subject I will first say here something on the subject of their beliefs in demons or devils.

M. L. De Milloué says "The demons are a perpetual subject
M. L. De Milloué of terror for the Tibetans who attribute to
on Tibetan demena. Epidemics maladies of men and beasts
carthquakes floods, droughts famines fires all is their work
of the smallest miseries of into such as the extinction
of fire, or the overflowing of milk which a housewife bolls 2

Of the Tibotan belief in dovils, Col Waddell says. The cle Waddell on the belief in defences as the sole mediators between God and man, are supposed to be able to drive away the hordes of ovil spirits that are ever on the outlook to inflict on the poor Tibotan and his family disease, accident or other misfortune and the malign influence pursues him through overy detail not merely of his daily life in his present oxistence but in the hife beyond the grave "3

In one of their greatest monasteries "one of the rooms was the Dovil's Chamber of Horrors a sort of satanic Aladdin's cave

<sup>2 &</sup>quot;The Buddhism of Tibet or Lamaism."

A brief account of a devil-driving procession of the

Having said something in general about processions and in special about religious processions that play a prominent part in the life of all nations and having spoken on the subject of some Tibetan processions and of the

Tibetan belief in demons I will now describe a devil-driving procession which I had an opportunity to see in a monastery at Darjeeling,1

On the morning of 3rd June 1913 at about 10-15 am, on paying a casual visit to the monastery of Bhntia Basti, I found, that there was something unusual there on that day The monks were making preparations for some grand occasion said that it was their great day of their Kali Mai (Black Goddess) This Kali Mai of the Tibetans was the Kali Mata of our country which is worshipped in our country and which is said to have given its name to Calcutta (Kali Ghat) ?

Before proceeding with my account of the procession on the day of the Kali Mai I will briefly say what position the goddess holds in the belief of the Tibetans

Col. Waddell thus describes the Tibetan goddess Kali which is called the "Great Queen." She is Tibetan goddess as dreaded that her name is seldem spoken RALL and thou only with bated breath In one room she is depicted as a fury in oven more repulsive form

For a rather fuller account of the procession and of my impres sions, eids my account in Gujarati, in the Jam-i-Jamshei of June 1813.

We know well, that the promoters of the Swadeshi movement at Calcutta, had with their favourite words of Hand & Mitaram, taken many a yow at their hely shrine of Kall at Calcutta. The remembrance of this fact led me to pay a visit to this shrine during my visit of Calcutta on my way from Darjeeling Though an old day I was truck a the the enormous crowd of worshippers at the hrine Though as steel by others as a foreigner is required an fort to go into the shrine I could then realize what an influence the godden kall had upon the people of Calcutta.

than her Indian sister. She is made to be a hideous black monster clad in the skins of dead men and riding on a fawn-coloured mule, eating brains from a human skull, and daugling from her dress is the mystic domino of fate containing the full six black points, and as the goddess of disease, battle and death, she is surrounded by hideous masks with great tusks and by all sorts of weapons—antediluvian battle-axes, spears, bows and arrows, chain armour, swords of every shape, and muskets, a collection, which gives her shrine the character of an armoury Libations of barley beer under the cuphemistic title of "golden beverage" (ser Lyem) are offered to her in human skulls set upon a tripod of miniature skulls. Her black colour is held not only to symbolise death, but profundity and black magic, like the black Egyptian Isis and the black Virgin of Middle Age Europe

"In the adjoining chapel is a pleasing golden effigy of her in her mild mood in the form of a handsome queen, about life size, richly inlaid with turquoise and pearls, and clothed in silks and adorned with necklaces. In this chapel, as well as in the adjoining one of the she-devil, tame mice I ran unmolested over the floor, feeding on the cake and grain offerings, under the altar and amongst the dress of the image, and up and down the bodies of the monks who were chanting her litany, and were said to be transmigrated nuns and monks, these attendants, however, of this disease-giving goddess, it seems to me, may represent the mouse which is constantly figured with Smintheus Apollo when he showered the darts of pestilence amongst the Greeks, and which has been regarded by some as symbolic of the rat as a diffusive agent of the plague."<sup>2</sup>

The presence of mice in the place of this plague giving goddess is significant, showing that a form of plague is always connected with the presence of rats (vide my paper in the *Indian Review* of January 1913, entitled "Plague in India, as described by Mahomedan Historians of the Mogul Empire," pp 17-19).

<sup>&</sup>quot; "Lhassa and its Mysteries," by Col. Waddell, pp 370-71

The celebrations in connection with the goddess Kali Mai were held for three days The month, in which they were held, was considered to be a sacred month, because some of the principal events in the hie of Gautama Buddha had occurred during this month Among these celebrations there were two processions -I The one was that for driving away the demons, 2 The second that of taking round through the village the sacred books of the monasteries I had the pleasure of not only seeing the processions but of actually going round with the processions. Of these two processions, the first was the devil driving procession proper The second, which took place on the next day (the 4th of June) though connected with the Kah celebration holidays and with the devil-driving procession was more properly a good-luok seeking procession wherein the sacred books of the monastery were taken round in hundreds mostly on shoulders of women through the different quarters of the village with a view that after the evils were driven off the sacred books may bring in good luck and happiness I will speak of the Book procession on another occasion.

To revert to my account of the Devil-driving procession of the first day on my reaching the monastery on the morning of 3rd June I found in the monastery a wooden framework which was placed on a square pedestal. It was made to ride on a mule. It was spoken of as Torma? It reminded me of the form of the structure of tibut which we see here on Mahomedan holidays and a Lama himself in order to make me clearly grasp the idea said that it was like tabut. The structure was about 10 ft. high and was decorated with pieces of cloth of variegated colours. In the centre it had the figure of a demon which was believed to embody in itself the sickness, musfortunes and other ord influences in the

Vads Col. Wad I II s." Buddlism of Tibet or Lamaiun" p. 434 for a figure of the forms,

village In the morning, a solemn service, lasting for about an hour and a half, was held. The worshippers, mostly ladies, passed over the figure some forms, made of flour, which they then placed upon the structure. This signified that their family illnesses and evils were also transferred to the structure of the demon which was to be hurled down into the adjoining valley in the evening. One of the Lamas then lifted the upper part of the structure and ran with it out of the compound and placed it at what can be called the entrance of the compound. This signified the first step in the removal of the demon

For the main service in the evening the head Lama was more ceremoniously dressed. His dress resembled that of the Cardinals of the Catholic Church. On his forehead and checks, he had put on three marks of some black colour, in order that the evil powers may not have any "evil eye" upon him. It reminded me of our Indian belief of najar utarm (-1622 Eal241), i.e., to avert an evil-eye. A typical instance of this we find in the customs of our Indian ladies, putting on two black marks, generally of a kind of soot, on the temple of a child, with a view that the evil-eye of an out-looker, if there be any, may thereby be averted

The procession passed through all the Bhutia streets of the village. The people in the streets also placed upon the structure small figures made of flour so that the maladies, misfortunes, &c, from their houses may pass away, together with the structure, into the valley wherein the structure was to be thrown.

One of their methods of frightening and driving the demons is to produce all possible kinds of loud noisy sounds. So, in the midst of their service also, they make use of all kinds of noisy instruments, such as drums, flutes, conches, jingling-bells, gongs, clarionets, &c, and play upon all of them at the same time. As if all that was not sufficient, the people that have assembled, especially boys, make as loud a noise as they possibly can. As a writer has said, the noise that is thus created by all these is really a "demoniacal noise."

I have seen in two hill fairs, in the Himalayas—one at Sipi near Simla and another at Siddhbûn in the Kangra Valley—players playing with all possible frenzy upon big drums with a view to make as lend a neise as possible. But that was nothing before the noise I heard at the Tibetan monastery when the monks played with all their instruments. I have never heard a more tremendous neise. It is a question whether these terribly loud noises drive away a demon, but they are st times such as would drive one away from the monastery.

To make as loud a noise as possible seems to be a way of honouring persons on occasions. Whatever one may think of the present refined methods of honouring great persons like royal personages these methods—(a) the firing of salute guns, (b) the playing of bands at times a large number of bands spoken of as messed bands (c) the loud acclamations of the people—they are as it were, refined remnants of the old ways, the relie of which we see in the Tibetan monasteries in all their fulness.

It is the Lamas who played upon all the above instruments both in the monastery and in the streets where they led the procession and were followed by the above structure which was litted up and carned by four persons. The head Lama in his full elerned robe followed. He held in his hand some consocrated water from which he sprinkled drops here and there all round to drive away the demons from the locality. The head Lama held a piece of black cleth in his hand He turned it here and there to drive away the demons therewith

The procession came to the edge of a piece of ground which projected a little over the valley below. The structure was dismantled and the Lamas and the assembled laity all made as it were a joint effect and produced as loud a noise as they could and threw down into the valley the upper part of the structure that was decorated with pieces of cleth

of variegated colours and that contained the figure of the demon. All clapped their hands to indicate that the devil was driven down into the valley. The Lamas then recited another prayer 1. All their raised cries of joy "Ha Hu". As in the case of our Indian tâbuts the lower and more substantial part of the structure was brought home again.

The procession now returned to the monastery where the head Lama stood over the lower part of the structure and holding a flag in his hand and waving it around, blessed all. In order to show, that the devil, the demons, the prits, etc., were all overpowered, he thrust a kinfe into the remaining part of the structure over which he stood. The assistant Lamas gave into the hands of all a few grains of rice and a little flour. All shouted vociferously with joy and throw over one another the grains of rice and the flour to wish reciprocal joy and happiness. A lady presented before the assembly a tray containing flour and ghee. That was a token of good omen for Laxmi or Goddess of Happiness. Two vessels full of Marwa, the favourite drink of the Tibetan Bhutias, which looked like our Indian toddy, were then produced. The head Lama first drank a little and then all drank cupfuls

It is said that such devil-driving processions are common all over Tibet. In some of the monasteries, they write down, on a piece of paper, the names of the calamities that may have overtaken the town or the village during the preceding year, and burn that paper in public to signify that the demons presiding over those calamities were burnt and destroyed

Compare the Parsee custom of clapping the hands during the recital of the Vanant Yasht (Yt XX) which ends with the words, "Kul balâ dafē shavad va div va Daruj, etc" ie, May all the calamaties and the Div and the Daruj be removed, etc" The recital at which hands are clapped is in Pazend and is a later addition. It speaks of the removal of the nuisance caused by rats, cats, snakes, wolves, &c vide K. E. Kanga's Khordeh Avesta, Fifth Edition pp 361 62).

We have in the Journals of our Society some papers on rain producing beliefs and ceremonies. In connection with those an account of the hall-driving ceremony of the Tibotans will be interesting. Rev. Kawaguchi the well known Japanese traveller gives an interesting account of how a Lema sought

Rev Kawaguchi's secount for driving away the demon of half-storm to drive away the demon believed to be presiding on hail storms. His account shows what a great belief they have in demons of all kinds—demons presiding not I such other calamities, but also on some

only on diseases and such other calamities but also on some natural phenomena. He says —

The nation is so credulous in the matter of religion that they indiscriminately believe whatever is told to them by their reli gions teachers the Lamas. Thus for instance they believe that there are eight kinds of evil sounts which delight in afflicting people and send had to hart the crops. Some pricets therefore maintain that they must fight against and destroy these evil demons in order to keep them off and the old school profess that in order to combat these spirits effectually they must know when the demons are preparing the hail. During the winter when there is much snow these spirits, according to the priests gather themselves at a certain place where they make large quantities of hall out of snow They then store the hall somewhere in beaven and go to rest until in the summer when the crops are nearly ripe they throw down the hail from the air Hence the Tibetans must make sharp weapons to keep off the hail and consequently while the spirits are preparing their hail the Tibetans hold a secret mooting in some ravine where they prepare hall proof shells which are pieces of mud about the size of a sparrow s egg. These are made by a priest who works with a servant or two in some lonely ravine where by some secret method he makes many shelfs chanting words of incaptation the while whereby he lays a spell on each shell he makes. These pellets are afterwards used as missiles when hall falls in the summer and are supposed to drive it back. None but priests of good family may devote themselves to this work.

Every village has at least one priest called Ngak-pa (the chanters of incantations of the old school) and during the winter these Ngak-pas offer prayers, perform charms or pray for blessings for others. But the Tibetans have a general belief that the Ngak-pas sometimes curse others. I was often told that such and such person had offended a Ngak-pa and was cursed to death.

"Having spent the winter in this way, the Ngak-pas during the summer prepare to fight against the devils. Let me remark, in passing, that Tibet has not four seasons, as we have, but the year is divided into summer and winter. The four seasons are indeed mentioned in Tibetan books, but there are in reality only two

"The summer there is from about the 15th of March to the 15th of September and all the rest of the year is winter. As early as March or April the ploughing of the fields and sowing of wheat begins, and then the Ngal-pa proceeds to the Hail-subduing Temple, erected on the top of one of the high mountains kind of temple is always built on the most elevated place in the whole district, for the reason that the greatest advantage is thus obtained for ascertaining the direction from which the clouds containing hail issue forth From the time that the ears of the wheat begin to shoot, the priest continues to reside in the temple, though from time to time, it is said, he visits his own house, as he has not very much to do in the earlier part of his service About June, however, when the wheat has grown larger, the protection of the crop from injury by hall becomes more urgent, so that the priest never leaves the temple, and his time is fully taken up with making offerings and sending up prayers for protection to various deities

"The service is gone through three times each day and night, and numberless meantations are pronounced. What is more strange is that the great hail storms generally occur when the larger part of the crops are becoming ripe, and then it is the time for the priest on service to bend his whole energies to the work of preventing the attack of hail.

When it happens that big masses of clouds are gathering overhead, the Ngak-pa first assumes a solemn and stern aspect drawing himself up on the brink of the precipice as firm as the rock itself, and then pronounces an enchantment with many flourishes of his reserv much in the same manner as our warrior of old did with his baton. In a wild attempt to drive away the hall clouds he fights against the mountain but it often happens that the everwhelming host comes gloomily upon him with thunders roaring and flashes of lightning that seem to shake the ground under him and rend the sky above and the volleys of big hadstones follow pouring down thick and fast, like arrows flying in the thick of battle. The priest then all in a frenzy dances in fight against the air displaying a fury quite like a madman in a rage. With charms uttered at the top of his voice he cuts the air right and left, up and down with his flat olenched and finger pointed. If in spite of all his efforts, the volleys of hall thicken and strike the fields beneath the pricet grows madder in his wrath quickly snatches hand fuls of the hullets aforementioned which he carries about him and throws them violently against the clouds as if to strike them If all this avail nothing he rends his garments to pieces and throws the rags up in the air so perfectly mad is he in his attempt to put a stop to the falling hadstones. When as sometimes happens the hall goes drifting away and leaves the place unharmed, the prest is pulled up with pride at the victory he has gained and the people come to congratulate him with a great show of gratitude But when nuluckily for him the hall falls so heavily as to do much harm to the crops his reverence has to be punished with a fine opportioned to the amount of injury done by the had as provided by the law of the land.

To make up for the loss the Agal pa thus sustains he is entitled at other times when the year passes with little or no hall, to obtain an income under the name of hall preventionatax, a strange kind of impost, is it not? The hall preven

per tan of land, which is to be paid to the Ngal-pa In a plentiful year this rate may be increased to two and a half sho. This is, indeed, a heavy tax for the farmers in Tibot, for it is an extra, in addition to the regular amount which they have to pay to their Government.<sup>1</sup>

With this Tibetan belief in devils and demons, and with these devil-driving processions and coreTibetan Devil- momes are connected their devil-dances.

I had not an opportunity to see such a dance, because it is performed only once a year on the occasion of their great new year's day. But I can form an idea of these dances from the masks of devils' faces which I saw in the monasteries and from the painting of the demons that I saw on the walls of the monasteries. I give here a picture of one of such devil dances.

The devil-driving procession of the Tibetans reminds us of the disease-driving processions of our country, generally known as mâtâni rath ( માલાના રથ) i c, the charmot of the goddess I have described these processions before this Society in my paper, entitled " માલાના રથ." 2

The Tibotan monasteries and the Tibetan customs, observed

Col Waddell's apology and hope for the better in the matter of the Tibetan devil-worship

at Darjeeling, have interested me a good deal and I have given an expression to that interest in a series of five papers before this Society during the course of one year. The study of Col Waddell's learned works

have greatly added to that interest, and I will close this paper, the last of this first year's series, with a long quotation from that talented author, entertaining and sharing with him, an optimistic view about the future of this interesting

<sup>&</sup>lt;sup>1</sup> Three years in Tibet, pp 271-75.

<sup>&</sup>lt;sup>2</sup> Journal of the Anthropological Society of Bombay, Vol IV, No. 8, pp. 419-26 Vide my "Anthropological Papers", pp. 96-103,

people. Col. Waddell after all his discription of and expression of displeasure for the prevalent devil-worship, thus speaks in an optimistic mood

The devil worship and superstation which have been brought so prominently before the reader seem to demand an apology from one who has been in some measure identified with the study of Northern Buddhism. Why is it that we find here, in the citedel of one of the great religions of the worlds so little which a traveller from Europe can appropriate or approve; I is the system wholly degenerate? Are the tares, which spring up instead of wheat in a barren soil the effect upon the ancient collightenment of a thousand years of barbaric decadence? Will the dead bones among which we have been rummaging, amid the soilitudes of the world's roof, never again live? Shall we Westerners when we obtain possession write no cheerful resur gance over their immemorial shances?

In the world, growth and docay go on side by side. The movement of the human spirit is, One shape of many names What meets the eye is not always a sure indication of character The Cathelle organisation for example was in the twelith century sunk into apparently hopeless decay yet in a few years we had Danto and a contury or two later the Renaissance learned Tibetan were to attend a wee Free Kirk service in the Highlands or in that lovely forbidden region of the Clyde the island of Arran he might be quite right in thinking it no better than some of the most degraded observances of his friends at home but would certainly not be justifled in concluding that Sootland was sunk in ignorance and in the practice of a peculi arly malignant form of devil-worship. Were we to carry out the evangelical precept that the true way to judge a religion is by Its fruits, are we sure that the rulers of India would better abide the test than the poor peasants of the Tibetan bills !

For my part I approve the extremely practical method of my friend, the Cardinal of Lhana, and am further of opinion mentioned in the sacred books of Europe Would not knowledge of the religious of Asia on the part of the fathers of a Catholic Church have saved that institution from the generation which befell it so soon after the disappearance of immortal founder? The recent vogue of Buddhism in prope has been held to betoken a latitudinarian indifference may be that it is a sign rather of a new illumination, showing that Christians are at length beginning to understand the ford of the Master, who was in truth much nearer akin to addha than to Paul or Augustine of Luther, or any of the hers who have proclaimed themselves to be in a special sense is followers and interpreters

"In short, the real mind of Tibet seems to me to be more ithentically expressed in the words of the Cardinal of Lhassa can in the superstitions of the monks and people. And I ould fain believe that the mission of England is here not so such to inter decently the corpse of a decadent cult, as to augurate a veritable dawn, to herald the rise of a new star in the East, which may for long, perhaps for many centuries, diffuse is mild radiance over this charming land and interesting people in the University, which must ere long be established under critish direction at Lhassa, a chief place will surely be assigned to studies in the origin of the religion of the country." 1

This view of Col Waddell, who, in his writings about Tibet, specially his "Lhassa and its mysteries", while throwing off the reil of mystery, writes very sympathetically, makes us say. There is nothing new under the sun". The most refined of the present communities of the world have passed through tages through which the Tibetans have passed Their final esult makes us hope for the better in the case of the Tibetans, nowever far the goal may be

<sup>&</sup>lt;sup>1</sup> "Lhassa and its Mysteries", pp 446-48

Col. Waddell's apology makes us halt and think over the The Devils of Dante and the idea of the devil and the demons provail no many communities Col. Waddell's thus speaks of the Tibetans Hell and their devils

"Hell is divided into numerous compartments, each with a special sort of torture devised to suit the sins to be expiated Only eight hells are mentioned in the older Buddhist books but the Lamas and other northern Buddhist describe and figure eight hot and eight cold hells and also an outer hell (Pratyckanaraka) through which all those escaping from hell (must pass without a guide The Brahamanical hells are multiples of seven instead of eight, some of them bear the same names as the Buddhists but they are not systematically arranged and as the crtant lists date no earlier than Manu, about 400 A D, they are probably in great part berrowed from the Buddhists."

The atmosphere of the hells is of the deepest black —
Light was absent all. Bollowing there ground
A noise as of a sea in tempost term.
By warring winds the stormy blast of hell.
Dante Canto V. 20

Each holl is enveloped by a wall of fire and the herrible terments are fit to Illustrate Danto Inferno. Indeed it has been suggested that Danto must have seen a Buddhist picture of these hells before writing his famous classic, so remarkable is the agreement."

Col. Waddellinas referred above to Dante's Inferno in connection with the devils and demons of Tibet. The Tibetan pretures of the devils remind us though not in the matter of

Waddell a Buddhism of Tibet n. 92.

See an article by M. Leon Feer "L Lafer indien" in the Journal Asiatique AX (180") and L (Newseries 1803) for lists and description of the Brahmanist belia.

their art in the pictures, of the devils we see in some copies of the Inferno of Dante and of the Virâf-Nameh of the Persian Ardâi Virâf.

We find that in many of the religious processions of olden times, there was the idea of dilving away the The idea of devildevil or the demon from the town or village driving in some of the religious prowherein the procession moved We see that cessions of other communities. idea in the accounts of the old Christian We know that some of the old churches religious processions of Europe are what are known as Plague churches They were founded for the performance of a vow undertaken when an epidemic ended. The vows were undertaken during the epidemics when religious processions passed through the infected towns praying for driving off the epidemics

I produce here a chart which I bought for Rs 4 at a Bazar gathering at Darjeeling. It is a chart with which itinerant monks and nuns go round Bhutia villages and deliver lectures or sermons on the subject of Heaven, Hell and their denizens. This chart reminds me of a large painting on a wall in a Church in Europe, wherein I saw a picture of a judgment scene, in which good souls were represented ascending to heaven and the evil souls falling into the abyss of Hell

## NOTE ON A RAIN-PRODUCING CEREMONY AMONG THE ARABS

## President THE AUTHOR OF THE PAPER (Bond on SOA Sentember 1914.)

The Journal of our Society contains several interesting papers on various ceremonies for producing rain. They are the following and have been given by Mr Sarat Chandra Mitra M.A. B.L. —

- "On some Ceremonies for Producing Raun (Vol. III pp 22-32)
- 2, "On the Harparown of the Behan Women's Ceremony for Producing Rain" (Vol IV pp. 384-305).
- 3 On Rain Ceremony in the District of Murshidabad Bongal" (Vol. V. pp. 114)
- 4 Further Notes on Rain-compolling and Rain-stopping Charms" (Vol. VII pp 101 202)

The object of this short note is to draw nttention of members to a rain-demanding ecromony inmong the Arabis referred to by Mr. Cl. Huart in his interesting article entitled "Superstitions of Rites populaires des Arabes anti-islamiques." in the issue of 15th October 1013 (p. 15) of L'Ethnographie" published by the Sockté d'Ethnographie de Paris M. Huart quotes several Arab poets who refer to the rain-drawing ceremony. The oustom referred to is thus succinctly described by the author (I give my translation).

"The Pagan Araba when they demand rain take the plants sala (Solanthus) and ochar (Calatropia process) I fasten them to the tails of cows apply fire to it and carry the animals to a mountain. That was their manner of demanding rain from God that is to say to proceed to the ceremony of supplication."

L Ochar is called in Beluchistan goulled sumon

The origin of this custom or ceremony seems to be the original idea referred to by M. Geyer that "the cows designated the clouds" (les vaches désignent les nuages) M. Huart thinks that that may be the idea in India but not among the Arabs But, as human nature is everywhere the same, man's way of thinking and of transferring poetic and spiritual ideas to ordinary mundane things, is often the same.

In the second of the above four papers of Mr. Sarat Chandra Mitra, we find a reference in a Behari song to the Suravi cow which is the name of a celestial cow and to the clouds which give rain. I think it is such an association of ideas that has originated the custom.

## PRESIDENTIAL ADDRESS

By Shars-ul-Ulma Dr. Jivanji Jamshedji Modi, B.A. Ph D

(Read on 25th February 1915)

While returns from the Chair following the precedents of Introduction.

some of my distinguished predecessors in office I beg to deliver my Presidential address this evening

In the first place I beg to tender my best thanks to the Scoiety for having elected me to the chair during the past year It was a privilege, to be seated in the chair worthfly occupied by some of the distinguished scholars of our city and henoured by distinguished anthropologists of our country like Sir Richard Temple Sir Denzil Ibbetson Sir Herbert Risley and others.

In the second place I beg to tender my homage of respect and esteem to the past occupants of the chair—to the memory of those who have gone to the bourne from which no traveller returns and to the living work of those who thanks to God, are still travelling within the bourne where we pray, they may still be able to travel and explore. Most of them have left behind them a tradition of good work both within the precincts of this society and outside. It is the inspiration derived from their memory and their work that has helped me to uphold, however humbly that honoured tradition. Retiring from the chair of the President and reverting to my cherished post of the Scoretary which before I was called to the chair I had continuously held for about 15 years. I thank my learned friend, Mr. Rustam Pestonji Masani for carrying on well my work as Secretary during the past year.

Lastly I beg to thank the past and the present members of the Council who have during all my connection with the Society whether as a member of the Council its Vice-President Secretary and Treasurer or President always helped me with their advice and co-operation Associated as I am with the work of this Society from wellnigh its very foundation about 29 years
ago, I feel special pleasure in delivering
this Presidential address. I propose to give
you in this address an idea of the work, or of the line of work
which we have done, and of the work that still lies before us.
In short, "The Retrospect and the Prospect of the work of the
Society" may be taken as the theme of my address this evening

We can look back with humble pride at the work done by

Our past work
and its appreciation with hope at the work that lies before us in
the future. We have published, in all, about
77 numbers (9 volumes, each of 8 numbers, and five numbers of the 10th volume) of the average of about 68 pages each. I note with pardonable pride, that out of these 77 numbers, about 48 have been published during my term as its Secretary. But numbers or quantity are no correct criterion for our work. One must judge from the quality. As to that quality, I will let a well-known literary critical Journal speak for us. The Academy, while noticing our Silver Jubilee Memorial Volume, thus spoke of the Society's work.—

"The Journal of the Anthropological Society of Bombay for 1910 and the Silver Jubilee Memorial Number for 1911 reach us together. If Government officials in India are sometimes caught napping through want of knowledge of the people of the country, their manners, customs, peculiarities, etc., this voluntary society is at hand to supply information of a miscellaneous and searching character. The society has an official Englishman as president, but the writers are nearly all natives of India, well-educated men who ought to be able to get at the correct facts, which they certainly can present in good style. .... The Silver Jubilee Number contains special contributions. The history of the society shows good work done for twenty-five years. The index of the papers read during the period and of the anthropological scraps ranges over the whole field of anthro-

pology though from a perusal of the titles the merits of the papers cannot be gauged. The specimens in this number are varied and excellent whether they deal with legal matters ethnography ancient engineering superstitions, Hindu rites and marriage or Totem theories. In such societies all classes of the community can meet freely and interchange ideas to their mutual advantage. 1

Again, while notherng one of the numbers of our Journal, it said

The Journal of the Anthropological Society of Bombay for 1911 and 1912 contains, as usual various excellent papers. As an Indian Judge said, speaking on the study of Anthropology Our philologists our anthropologists our antiquarians are doing us practical service. .. We must understand the past aright to guide us now and build for the horeafter. Folk lore part of this subject is the science which treats of the survival of archate beliefs and customs in modern ages. The papers of this Society should be more widely known.

I was glad to observe with pardonable pade, that literary Journals like the Athenaum and Academy have while noticing favourably my volume of The Anthropological Papers read before this Society and published and dedicated to the Society on the occasion of its Silver Jubilee approximate the work of our Society The Athenaum recommending the volume "to every scholarly student of India naked anthropologists in general to note this welcome agn of the activity of their brethren of the Anthropological Society of Bombay 3

The Academy under the heading of Interesting Folklore's

Such associations, as the Anthropological Society of Bombay justify their existence and perform a public service when their members add to the stock of common knowledge by such papers as are to be found collected in this volume. They

The leaders of ath April 1912, pp 4~9-30.

The Academy of 19th October 191" pp. 315 fc. The Attendem of 19th July 1912 pp. 43-44

supply a deficiency which undoubtedly exists. In these days of pressure, few officials have time or strength for more than the disposal of current work, their knowledge, therefore, of the natives among whom they live and work is of a very superficial character, native customs, their origins and effects, the motives which sway them, in a word, their life are a sealed book, and the ignorance may lead to administrative failures in such matters as famine, plague, sanitation, medical relief, education, etc. where the beliefs and sentiments of the masses cannot be altogether disregarded. In such papers, experts and specialists can write freely and fully Mr Modi, an educated Parsee gentleman, and a prolific writer, has recorded in his essays such that would not otherwise be published of his countrymen, whose ancestors emigrated from Persia, fleeing from the Arab conquest in the eight century, and settled in the Bombay There is much to learn of Indian life from Presidency. which Mr. Modi should continue to write and his papers publish "1

Looking back to the past, we have every reason to be glad at the welcome we received in the start, in a Conservative country like India, in contrast with what similar movements in more advanced countries received Anthropology, as a regularly studied science, is comparatively a science of recent growth The Anthropological Society of England was founded in 1863, i.e., about 50 years ago

In early days, both the State and the Church looked with suspicion at the work of Anthropologists. The Government of France had opposed the attempt for the foundation of an Anthropological Society in Paris in 1846. So, the attempt was, at first, given up. At last, when it was founded in 1859, about four years before the foundation of the Society in England, the founder. M. Broca "was bound over to keep the discussions

<sup>&</sup>lt;sup>1</sup> The Academy of 14th September 1913.

within legitimate and orthodox limits? and a police agent attended its meetings for two years to see that the condition of confining the discussion within orthodox limits was observed. They say that in Madrid, a similar attempt to found a Society was suppressed from similar fours which suspected that the subject of anthropology bore—eruptive potentialities 2

An example of the mistrust of the Church towards Anthropolo gical matters in the last century is presented by the case of It is said that his James Cowles Prichard (1786 1848) father when he observed the direction the investigations of his son were taking, enjoined him to write nothing which would tend to undermine the literal interpretation which was at that time given of the Scriptural account of the origin of man When Buffon, in the middle of the 18th century, delivered his lectures on Anthropological subjects the Church in France raised a storm of protest against his views and he had to suppress some of his foctures. In 1810-18 when Sir William Lawrence (1783-1867) delivered his Lectures on Communative Anatomy Physiology Zoology and the Natural History of Man, he was charged "with the unworthy design of propagating opinions detrimental to society and of endeavouring to enforce them for the purpose of loosening these restraints in which the welfare of mankind depends. 4 Though at first he stronuously opposed any interference with his independence of thought and speech latterly he had to suppress the volumes of his lectures

Thanks to the tact, zeal and energy of our founder the late Mr Tyrrel Loith and to the good sense of our people however conservative that our Secrety met no opposition either from the State or the Church Wo find that as far as our Seclety is concerned both the State and the Church have latterly

<sup>1</sup> Dr D J Cumingham's Presidental Address for the January 10 is Journal of the Poyrl Individual Institute f Unit Herita and Irrhad Vol XXXVIII (New Kernes, Vol. XI) p. 11
18td. 18td. p. 48

attempted to help it—Since 1912, the Government of Bombay, as representing the State, have begun to give us an Annual grant of Rs 500—We require no official recognition from any church, but we had several churchmen, both of the church of the West and of the East on our roll and one distinguished churchman of the West, Rev. Dr. Machickan, was our President for one year.

Prof. Huxley is said to have predicted, about 47 years ago, in his Anthropological address, that some of Importance atthe teachings and discoveries of Anthropotached to Anthropology at present logy, though thought to be shaking "the foundations of the world" at the time, would be taught in school 30 years thenco. His prediction has turned out to be true and Anthropology is now taught in the Universities Fortyseven years after the time of his address, we find, that even in our country, hopes are being entertained to introduce the study of Anthropology in our Universities Sir Alfred Hopkins, the earned Vice-Chancellor of the Manchester University, who had been in our midst last year, as an expert to advise our local University, has referred to Anthropology in one of his Reports2, as one of the "important subjects" to be taught hereafter. Even our present Prime Minister is reported to have said that a knowledge of Anthropology "must form part of the normal equipment of those who in the Consular, Indian, and Colonial services, have to carry on the work of the Empire especially in its outlying parts";

Last year, we had before us for consideration a letter of the

The Representation of the Royal Anthropological Institute of England. Council of the Royal Anthropological Institute, dated 18th April 1913, to the Secretary of State for India, giving an expression to their views, on the subject of the Oriental

Research Institute, which the Government of India proposes to

<sup>1</sup> Address before the British Association at Dublin, 1878 Vide Journal Anthropological Institute, New Series, Vol. XI, p. 11

<sup>&</sup>lt;sup>2</sup> Report, dated London, 1st May 1914 Appendix IV, p 3

B Presidential address of Prof William Ridgeway (Journal of the Anthropological Institute, New Series, Vol. XIII, p 10)

found In that letter the Council thus speaks of the importance of the study of Anthropology in that Institute.

"In the first place we have to represent that anthropology not in the restricted sense of physical anthropology alone but in the broader significance of the science of the evolution of human culture and social organization, should be an integral feature of the studies of the Oriental Research Institute My Chunoil desire to refer in passing to the importance of anthropological study from an administrative or political point of view and to its bearings on the difficult and peculiar problems which confront the Government of India at every turn. To discover to discuss, and to decide the nature and origin of the deen-scated differences of thought and mental perspective between Eastern and Western societies is a task of high importance and of great complexity which seems possible of achievement only by the wide synthetic methods of modern Anthropological science by which the results won by workers in the domains of religion archaeology history art linguistics and sociology are unified classified and co-ordinated As the writings of men like Sir Herbert Risley some time President of the Royal Anthropological Institute Sir Alfred Lyall and Sir George Grierson domonstrate beyond a doubt a comprehensive examination of present-day Indian conditions reveals the working of social ideas and ideals which have their origin in a low level of culture Among the people of India to-day are preserved beliefs oustoms and institutions which testify to the vital intimacy of the relations between the higher and the lower forms of culture and to the special importance of India as a field for anthropological research

This movement was anticipated by the late Sir Herbert Ri ley in his Presidential address before the Royal Authropological Institute wherein he said that the Treasure had appointed a Committee in 1907 to consider the organization of Oriental Studies in London The Committee had then had atrees upon the importance of studying the character, the religion, the

currons and the court organization of the various people who error under British rule. This was then a right step in the direction of the recommittee of Anthropological title rediction of the administrative problems of the Umpire. By your of the Residution of the Government of Bambay No. 3500, dated the December 1913, the subject was rest to us for opinion and we approved of the recommendation of the Royal Anthropological Institute for a systematic study of Anthropology in our country.

Our founder the late Mr Tyrrel Leith had used his personal influence and interested many in the work public report in of the Society. I remember one of its early settings in the Town-Hall where a large number attended. During the second year (1997), the number of worders were 321. On his death, it

(1887), the number of members was 331. On his death, it legan to fall. I find, that as far as the work of our literary societies, such as the Bombay Branch of the Royal Asiatic Society, the Anthropological Society and others is concerned, there is a fall in the literary activity of Bombay. What is the cause? Is it that the educated classes are so much overworked in their daily as ocations as not to be able to attend one or two monthly meetings of these correties? Perhaps that is so, to a small extent But that does not seem to be the only cause Perhaps, it is the number of Gymkhanas and Clubs that have arisen, of recent years, among us, that is the cause of this fall in the literary activity of the learned societies. If so, we may say to the seekers of pleasure, that our Society also offers a kind of pleasure It is intellectual pleasure. I repeat here what I have said in my Paper on "A Short History of the Society" read on the occasion of the Society's Silver Jubileo in 1912 -"I owe a good deal of the pleasure of the last 25 years of my life to this Society Not only have I enjoyed pleasure at its meetings, but have enjoyed it outside With, what I may call, the Anthropological training which I have received at its meetings, the sphere of my studies and of my sympathies has been

enlarged. I enjoy my morning walks, whenever I happen to go out of Bombay on holidays or otherwise better than before. The sight of peculiar customs, manners and things draws me and the spirit of inquisitiveness imbibed in the Society makes ma enjoy a talk with and the company of people of all classes. Even in Bombay familiar sights of the observation of formal customs and manners do not bore me but set my mind think log. For example, take the marriage ceremonies of the Parsecs Though my attendance at the marriage gatherings is very frequent the ceremonies and oustoms observed, though so ofton seen, are not without giving me the pleasure of some pleasant Anthropological thoughts. 1

So I beg to assure those who are outside of our Society and who are inclined towards intellectual pleasure that their attendance at our meetings will not be wearsome. They will hear many an interesting thing about the manners, customs, and beliefs of the various classes of this vast country which will give them pleasant food for many a pleasant thought

The Anthropological Society of England also had to pass through some violantudes in the matter of their number Four years after its foundation in 1863 its number was 706. Prof Huxley attributed the popularity of the Society io the early days to the innate belicose instincts of man and to the splendid opportunity afforded by Anthropology for indulging these proponsities. As Dr Cunningham says, the talk in that Society was of a distinctly volcanic character. Politics and religion were not excluded from its debates. Let us enlarge our roll of membership not by giving food to belicose instincts but by other means which could appeal to the pieceful instincts seeking both for pleasure and knowledge.

The large number of members in the Aothropological Society of England, for which Huxley had expressed his pleasure and which he had attributed to the bellicose spirit of mankind,

<sup>1</sup> Silver Jubiles Memorial Volume of the Anthropological Swisty of Bombay 1911 pp. 2.2.

has dwindled, and in January 1890, the then-President Mr F. W. Rudler, in his Presidential address 1 at the Annual meeting, expressed his regret at the poverty of the members of the Society. He said that out of the 3 or 4 hundred million inhabitants of the British Empire, only about 300 joined the Society. If one has to complain for a paucity of members in a country, far advanced in education, like England, it may be supposed that we, in India, need not complain for our 60 or 70 members.

Mr Rudler attributes the prucity of numbers to "two opposite reasons—some holding that our studies are too specialised, and others that they are not specialised enough. The one set regards Anthropology as a formidable branch of biology—its very name a stumbling block—representing a science to be comprehended only by those who have had the advantage of special training, whilst the other group regards Anthropology as an incoherent assemblage of odds and ends of knowledge, not yet sufficiently systematized to rank as a distinct science. The popular mind seems, in fact, to be in rather a nebulous state as to what is, and what is not, Anthropology."<sup>2</sup>

In order to clear the "nebulons state" of mind referred to

A Brief Survey of the field of Anthropology in general. by Mr. Rudler, and in order to have a look into the past work of our Society and an out-look into the work that hes before it, let us briefly survey the field of Anthropo-

logy according to the modern requirements or views

Biology is the science of life in general Botany is the science of life in plants. Zoology is the science of life in animals. Anthropology is "the highest department of the science of life." It is the science of man. It inquires into the natural history of man. It aims at a scientific study of man—man considered in his entire nature, physical, intellectual and moral. As

<sup>1</sup> Journal of the Anthropological Institute, New Series, Vol. I, p 314

<sup>2</sup> Ibid, p 314.

such a to presents various questions for study and inquiry. It comprises "all the elements of a comprehensive monograph on mankind. From these points of view, various questions present themselves before us for inquiry.

Some of the principal questions are -

- 1 Whence came Man? Did he grow or was he made? These questions are a varied form of a question like this What is the Origin of Man and the Origin of the World?
- 2 How long has Man existed ?
- 3 How did Man live in former days !
- 4 Did Man always possess his present knowledge of arts and handscrafts or did he acquire these arts ?
- 5 How did the institution of Family evolve? Was there community of wives at first or marriage?
- 6 Are the characters acquired by parents during their life-time transmissible to the offspring?
- 7 What influence does environment exert in modifying the bodily characters of an individual?
- 8 Is the origin of mankind single or multiple !
- 9 Did the original Man go erect or on all fours?
- 10 If all men are descended from one pair—the first Adam and Eve—how do we account for the variety of the colours some being white and others black? Why the variety in their halr some being straight haired and others curt haired? Why the variety in their face some passessing protuberant jaws and others bearing faces lying entirely under the shelter of the furchesd?

Division of tnthropology this many-sided science of Anthropology into two principal branches.

- 1 Physical Anthropology
- 2 Cultural Anthropology

Broadly speaking, Physical Anthropology treats of man from Physical Anthro a biological point of view. It looks to his pology anatomy, physiology his form and feature and such other "phases of his physical being." So, Physical Anthropology is subdivided into various divisions, which "cover the field of what Man is in all that concerns his physical being." The following are the principal divisions.—

- 1 Anthropogemy, which looks into the Origin of Man and into the conditions of his primitive existence. It looks to his geological history and zoological descent or his connection with, or resemblance to, lower forms of animal life.
- 2. Biology of the science of life, which includes anatomy, anthropometry, pathology of the science of the nature of disease, physiology or the science which treats of the functions of man's different parts of organs, and such other sciences
- 3 Ethnology, or the science which treats of the different natural families or races of man. It includes the migration of races, the principles and causes of racial differentiation and their different characteristics. The term Ethnology includes in itself Ethnology proper and Ethnography. Ethnology proper is the combined study of all aggregations of men, but Ethnography, as its branch, is the study of particular aggregations of men.
- 4 Psychology which treats of "the phenomena of the human mind and its processes, the organic basis of thought" In this subdivision, the word Psychology is distinguished from its general broad sense of the science of human soul (psyche) It treats specially of the organic basis

As pointed out by Dr Cunningham, Man's physical qualities connect him with the brute but his cultural works distinguish him from the brute and rather associate him with the angelic or the Divine So, cultural anthropology, also spoken of as functional anthropology, embraces the whole sphere of man's work,

whether manual or mental intellectual or moral. White Physical anthropology treats of Man as he we cultural anthropology treats of Man as what he does As such it is divided into the following branches—

- I Archeology (lst discourse of the ancients) which describes all human work of geological and prohistoric times and looks into the conditions of his in those remote times.
- 2 History which narrates the progress of man during historic times based on the authority of tradition and written records. In this connection, it is the history not of particular men but of mankind which is history proper. It is not as exponents of the age but as exceptions to it that great men have their real importance and value in history. The written records of history include the records brought to light by spade work. As MaxMuller said the history of the whole world has been advanced of late by the spade rather than by the pen

If one were to look to Cultural anthropology, and to History as one of its divisions from a practical point of view he must remember the words of Edmund Burke that People will not look forward to posterity who never look backward to their ancestors History is "civil theology of Divine Providence Herodotus, the father of History is also spoken of now as the father of Anthropology because his history of the smolents treats of their culture in general and serves as a helpmate for the study of their Cultural anthropology

- 3 Glossology which treats of all modes of expressing thought, whether by language or otherwise e.g. by gestures
- 4 Technology (lit discourse on arts) which treats of the knowledge of all kinds of materials tools and instruments which mankind has from time to time discovered and employed to supply their wants
- 5 Fatheotology (discourse on the Beautiful) which treats of the taste for all kinds of descrative art, and points out man a desire for what is beautiful in Art. It treats of all fine art.

- 6 Natural Science, which treats of the ideas and theories whereby Man explains the phenomena of Nature.
- 7. Philosophy, which treats of the ideas and theories, whereby Man explains the phenomena of Life
- 8. Social Anthropology, which is the study of Man in Society It is "the embryology of human thought and institutions" Most of the customs and manners of the modern men of higher culture are the survivals or, as it were, the fossils of the beliefs and customs of the ancients who are taken to be less civilized than the moderns
- 9 Religion, which treats of the relation of Man to his Maker and to the surrounding world. It includes the broad question of the ideas of Man in regard to spiritual life. It includes all questions of belief in life after death, of religious customs and ceremonics and even of real or so-called superstitions.

Our society, has worked pretty well in the field of Cultural our Society's anthropology For details, I would refer our past work Further work required in Physical Anplet to my Paper, on "A Short History of the Anthropological Society of Bombay" published in our Silver Jubilee Volume (1911, pp. 1-60), wherein, with the assistance of my then assistant, Mr Furdunji Maneckji Pavri, I have given a rather exhaustive Index of the subjects treated in our Journal during its existence of 25 years

Our journals have a number of papers on some of the different branches of Physical anthropology, though not many We have, as yet, very few means and materials and no workers for doing anything worth-mentioning. We are entirely dependent upon, and indebted to, the West for the cultivation of this branch. Among the various branches of this division, the one which requires some further study and work in this vast country of various races is Anthropometry. Anthropometry includes Craniology, which is that branch of it which studies the forms of skulls to determine the different races of mankind.

Camper was the first scientist to devise a cramometrical system. He was a painter He first studied the facial characteristics He studied the paintings of the Eartern Magi, and found that though painted black, they were not negroes . They were coloured as negroes but they had the features of Europeans No he began to attain accuracy in the delineation of the facial characteristics of the different races and devised a granfometrical system."1 His predecessors in the line followed the appearance of what is technically known as Norma Verti culis s e the outline which they (the skulls) present when viewed from above. But he followed the measurement of the facial angle." This angle was formed by drawing a line from the aperture of the ear to the base of the nose (submaral nount) and another from the line of junction of the lips (or in case of the skull from the front of the melsor teeth) to the most prominent part of the forehead The two extremes of the facial angle in man are 70 to 100 -from the Negro to the Grecian antique make it under 70 and you describe an Orang or an Ape lessen it still more and you have the head of a dog "2

A few years ago an officer interested in othnographical work in the Northern Frontiers of our country wanted to ascertain, if a cortain tribe there was of the Iranian stock to which the Paraces belonged. For that purpose he wrote to me to inquire about the Anthropometric measurements of the Paraces I found that none were ever taken here Thus materials were wanted to make further inquiries in othnographical matters

For the purpose of a good deal of work in Physical Anthro Some knowledge pology though it forms a technical diri of Cultural Anthropology necessary of continuous and the pology necessary at times for example take Craniology which as said above forms a branch of Hyasal

Journal of the Anthropological Institut | New Ferr & Yel. Yt. p 19 Dr Cuminghams Presidential Address.

Anthropology. In the matter of the study of racial distinctions which it helps, the knowledge of native customs and manners, the study of which belongs to Cultural Anthropology, necessary In this country, the Indian dhâis or midwives, occasionally shape the heads of newly-born infants, if they are thought to be of some abnormal growth In this work of shaping, there may be cases of, what may be called, ignorant So, the scientific men who deal with the over-shaping measurements of heads must pause twice before coming to any sudden conclusion from the examination of one or two heads It is not so only in India In other countries also, artificial means are resorted to, for giving particular shapes to the different parts of the body Vesalius is said to have been the first to place "the study of the structure of man on the solid foundation of direct observation" 1 In noting certain racial distinctions, he remarked. "It appears that most nations have something peculiar in the shape of the head The crania of the Genoese and, still more remarkable, those of the Greeks and the Turks are globular in form This shape which they esteem elegant and well adapted to their practice of enveloping the head in the folds of their turbans, is often produced by the midwives at the solicitation of the mother"

A peculiar instance of customs varying the conditions of men's bodies is supplied by what Herodotus says of the skulls of those killed in the battle on the Pelusiac mouth of the Nile between the Egyptians under Psammenitus, the son of Amasis, and the Persians under Cambyses Herodotus<sup>2</sup> says

"On the field where this battle was fought I saw a very wonderful thing which the natives pointed out to me. The bones of the slain he scattered upon the field in two lots, those of the Persians in one place by themselves, as the bodies lay at the first—those of the Egyptians in another place apart from them. if, then, you strike the Persian skulls, even with a

<sup>&</sup>lt;sup>1</sup> Dr Cunningham's Presidential Address. Journal Anthropologica Institute N S Vol XI, p 16

Herodotus, Bk III, 12, Rawlinson's Herodotus, Vol. II, pp 404-5.

pebble, they are so weak that you break a hole in them but the Egyptian skulls are so strong that you may smite them with a stone and you will searcely break them in They gave me the following reason for this difference, which seemed to me likely enough —The Egyptians (they said) from early child hood have the head shaved, and so by the action of the sun the skull becomes thick and hard. The same cause provents baldness in Egypt where you see fewer bald men than io any other land. Such then, is the reason why the skulls of the Egyptians are so strong. The Persians, on the other hand have feeble skulls, because they keep themselves shaded from the first, wearing turbans upon their heads. What I have here mentioned I saw with my own eyes and I observed also the like at Paprenns, to the case of the Persians, who were killed with Achemence, the son of Danes, by Inarus the Lybian.

This story shows that the custom of the ancient Persians to go always with covered heads and that of the Egyptians with shaved heads had an effect open thier skulls. So a scientist nat knowing this custom would from a more examination of the skulls, may be driven to a conclusion other than that warranted by the custom of the country.

<sup>1</sup> The above custom of the accient Persians is followed even now by their modern descendants the Parseca. One always sees a Parsec, with the exceptions of those who have now taken to Puropean costume error at home with his head duly covered. Later Parses books speak of going bare-headed as a sin. About forty years ago when a Parses Professor at the Grant Medical College delivered his lectures bare-headed, there was an uproar against him in some Parsec papers.

A devoit Parsee while saying his prayer would not only keep his head covered with a skull-onp, but would, in addition, like to put on lat turban. If not a turban he would at least like to put on a kershif on his head as a substitute for a turban. If during the recital his head-dress accidentally drops his prayer is vitiated and he has to perform the kest-podyble again and begin his unfinished prayer affair. The head-cover has come to play such an important part that for a prior who is collointing at the inner liturgical services of the religion and who is therefore qualified with the Broat am (a particular oversor by requiring a ten days retrest with eritain prayers) even the archievtal

As said above, it is in the branch of Cultural Anthropology

The Society's work in the branch of Cultural Anthropology that our Society has worked much, and has, as said by the Academy in one of its issues, "done well" For those who may be in the above-referred-to "nebulous state" of

mind about our work, I beg to say, that though we aim at the scientific knowledge of man, both physical and cultural, past and present, our work is more in the line of comparatively the less technical branch, viz, the cultural branch, which, as said by Mr Rudler presents, "a popular, fascinating, and readily-approachable study"

As said by Camper "next to the pleasure of discovering a truth, was the pleasure of spreading it abroad" 2 So, next to the pleasure of acquiring knowledge, we must have the pleasure of spreading that knowledge. We want therefore more members, if not as actual workers and contributors, at least as hearers of our papers and as readers of our journals. The knowledge acquired by them in the Society and spread by them outside it, will not be without its advantage.

After a look into the past, one may have a look-out, or an outSome subjects

what is already done in the matter in the Anthropological world.

fall of his turban from his head disqualifies him from further priestly work, until he goes through the Barashnum again. Cf A similar custom among the Flamines of Jupiter "Sulpicius when the tuft of his head fell off accidentally was deposed from his sacred office" (Article on Hats and Caps in Good Words of June 1893 p 389)

With the question of a covered head, goes the question of the growth of hair A Parsee priest, is expected not to be bald and hairless. He must keep a beard. He must not shave. If he has to remove the hair occasionally, he may cut them with a scissor but not shave, which practice amounts to this that he must always have some growth of hair on his head. An initiate for the Priesthood (Navar) must have over his head the growth of at least one month's hair before he offers himself for initiation.

When a dead body is covered with a shroud, the head is the first part of the body that is covered

The fellowing are some of such subjects -

- 1 Further collection of Anthropological materials
- 2 Mythology
- 3 The Aryan question
- 4 The setting of Customs and Beliefs in their proper position and light
- 5 The question of what is a Nation
- 6 Colour and Culture
- 7 The Non transmissibility of acquired character
- 8 The knowledge of Physical Anthropology and Cultural Anthropology mutually helping each other
- Question of the Handierafts, Habitation Food etc of Man

The most important branch of Cultural Anthropology that appeals most to us here is what is known as I Importance of an early collection of materials, Social Anthropology In India there is e wate field for us for a collection of mate rials for this branch. As said above some regard Anthropology ss an incoherent assemblage of odds and ends of knowledge not yet sufficiently systematised to rank as a distinct science Well that view was partially true at one time and is even new true to a certain extent. As a matter of course, that must be so. Some must collect materials from which others may systematise From the very nature of the present state of the science the collectors of materials must form a large number and the systematisors a small number A careful collection of materials made after a good deal of inquiry examination and oven cross-examination is not an easy task and is not without its adequate value. Well sifted materials supply good back to the systematiser for his theories

A good deal of the work of our Society has been in the direction of the collection of Anthropological materials or data but our Journals show many an attempt to cy tematice and to theorize. In a vast country like India which is being very rapidity

revolutionized in the matter of its customs, manners and behefs by the spread of the Railway and the tolegraph, and of motor-cars and motor-cycles in its distant corners, the necessity of soon collecting the materials before they are destroyed by the above and other agencies, is great and urgent. Even if our Society has done nothing else, and even if it does nothing else for some time, still its work of collection will be considered to be "good work.' Mr Rudler in his Presidential address of 1899 before the Anthropological Society of England said, "The pressing necessity of instituting eareful anthropological researches among uncultured peoples is every day becoming more evident By contact with the missionary, the merchant, and the miner, these peoples are rapidly losing their primitive condition, and our opportunities of observation are consequently becoming more and more contracted While rejoicing at the progress of civilization, the anthropologist feels that the dark places of the carth are precisely those places most likely to throw light upon many problems of the prehistoric past "1 What Mi Rudler says of the uncultured tilbes of Africa and America is also true of the uncultured tribes and even of some of the semicultured and fully-cultured tribes and communities of India Even a cultured community is not free from some kinds of These must be collected and examined superstitions is their customs which require greater attention. The study of their origin and evolution helps to shed a good deal of light upon many a problem of the past

In a country like India, a country of several creeds and castes, a country ruled by an alien race, the study and know-ledge of the customs of the people are to a certain extent essential for the rulers. Some of their customs, however crude they may appear to the eye of a Westerner, have, for generations, worked for good government, parental discipline, fraternal feelings, sanitary ordinances, etc. We will not, and cannot, keep away the civilizing influences of the Missionary, the Merchant

<sup>&</sup>lt;sup>1</sup> Journal of the Anthropological Institute, New series, Vol. I, p 321

and the Miner from our country but before they dostroy we must collect, group and register a good deal of what they destroy Otherwise we will be loang a good deal of the materials for Cultural Anthropology of the kind which Sir James Frazer has grouped and systematized and of which a good deal still remains to be grouped and systematized Far be it from me to say anything against the Missionares who have done a good deal for the good of India, but it may be said for the guidance of some of them who are over zealous and over anxious, that they may do nothing in the line of destruction before they replace it by construction A hasty and carcless removal of good old beliefs with a view to replace them by unsuitable brand new movements or ideas gives a shock to the foundation of faith and brings the followers between the two stocis to the ground.

The subject of the collection of materials reminds us of that well-known Anthropologist who may Prof Frazer the great Collector-ge-neral of Anthropovery properly be called the great Collector general of Anthropological materials One of logical materials. the events in the Anthropological world of the last year was the knighthood conferred upon Prof Frazer the renowned author of the monumental work of the Golden Bough Among the number of congratulations received by that learned Anthropologist, there was one sent by our Society as resolved at its meeting of 24th June 1914 Our Society has also enrolled him as an Honorary Member and subscribed its small mite to the Memorial Fund started in his honour The work of Sir James Frazer is such as should appeal to us as most of our work should appeal to him His lifelong work is in the line of Cultural Anthropology the branch in which we are principally working

Anthropological theories vary Some theories are overthrown

The question of 8 pertitions suggested by Sir James 1 rates | | 1 k. and others replace them. Anthropological differ in their conclusion. So some max differ from Sir James Frazer's conclusion But his chief ment best in in giving to

posterity a rich collection and grouping of material -the result

of a life long patient work. What the Athenseum has said of a line of thought, suggested by his "Payche's task, a Discourse concerning the influence of superstations on the growth of Institution," suggestato us one of the lines in which our Society may work still more and more, i.z., the Collection of Indian super tition. It said that the point of his book was, "Absurd as the superstations of the savage may be when considered in their class, they have in many wave wrought useful service for manking. Utterly fant is to get they are from the stand point of theory, they have often proved in practice to be highly beneficial." I for example—the doctrine of the divine right of kings has made for good government in the past, 2. Some social in titutions of several tribe, are based on superstitions, which so far have their advantage.

The civilization and advancement of mankind has rested upon-

- (a) Respect for Government
- (b) Respect for Private property
- (c) Respect for Marriage.
- (d) Respect for Human life

(a) As pointed out by Prof Prazer, in some of the uncivilized tribes of Africa the respect of the people for all these is based on their superstitious beliefs. For example, the Malanasian tribe believes that their chiefs possess some power derived from the supernatural power of some spirits or ghosts. It is this superstitious belief that leads them to respect the authority of the Government of their chiefs. The belief of some English men in the last century that scrofula, which was called the "king's disease," could be cured by the touch of the king, is a remnant of a similar belief. It is believed that Johnson was cured by this remedy. The belief of the Scots during the last century that the arrival of the Chief of the Macleods in Dunuegal

<sup>1</sup> The Athenaum of 17th January 1914, No 4499, p 84.

was accompanied by a plentiful eatch of the horring was also a remnant of a similar beliaf

- (b) In the case of respect for private property the super statious belief of the uncultured tribes associated a kind of curse with property. One who misappropriated another's property was sure to meet with the dire results of the curse. That belief led him to look with respect towards others properties. The Achemenian king Darius in one of his inscriptions implores a curse upon those who meddled with his property—his inscriptions—and destroyed them. The curse included that of being childless which was one of the worst curses among the ancient Iranians the next being that of being horseless. The superstitious fear of such curses may be taken to have served in those times the purpose of a modern Monument Act. None dared to meddle with his inscriptions as long as he understood the
- (c) It was not an Aot of Legislature which considered adultory as a crime, that made some of the rude uncultured tribes respect the bond of marriage but it was the belief of a religious sin that made them respect it.
- (d) It was the belief in the ghost of the murdered man revenging the murder that made some uncultured tribeamen respect the life of others and not the feer of a punishment according to any Penal Code

The collection and the systematization of superstitions present a good field of work. While traveling in Europe in 1843 I was atruck with the similarity of some of our Indian superstitions with those of Furope and I have embodied my notes in a Paper before our Society 2

<sup>2</sup> I IV Nama VI 12

Trule my Paper on A Few Superstitions common t Programation in the Anthropolytical Society of Bombay Vol. II No. 2, pp. 101-71, I all my Antiropolytical Papers pp. 22-22.

While speaking of Anthropological materials existing in India, I am reminded of Prof W Ridgeway's first Anthropology Presidential address 1 from the chair of the the Indian and Classics Anthropological Institute wherein he took as his theme, the subject of "The Relation of Anthropology to Classical Studies " Scholars in the West have attended in various ways to the subject from the point of view the Western classics For example, we have excellent recent books like "Anthropology and the Classics" edited by Mr R R Marett, containing six papers by different scholars, and "The Anthropology of the Greeks" by Mr E E Sykes Again "The Anthropological History of Europe" by Dr John Beddoe, which begins with the Aryan question and the question of the variation of type is an interesting book, though not mainly connected with the ancient classics. We have now a Classical Association in our city and I hope its members would occasionally give us Papers on Anthropological materials gathered by them in their study of the classics What I beg to suggest is, that some Indian scholars can well handle the subject from the point of view of Eastern classics Anthropology of the Vedas, Anthropology of the Purans, and such other Papers or Essays will be a valuable addition to our Anthropological literature A Parsee can well take up subjects like the Anthropology of the Avesta, the Anthropology of the Ancient Iranians and the Anthropology of Firdousi. Rev Dr Casartelli has a section on Iranian Anthropogeny 2 his book of the Religious Philosophy of the Sassanian times, but the whole subject can be well amplified and worked out for an exhaustive paper

<sup>&</sup>lt;sup>1</sup> Journal of the Anthropological Institute, New Series, Vol XII pp 10 et seq

<sup>&</sup>lt;sup>2</sup> La Philosophie religieuse du Mazdeisme sous les Sassanides, Chap V, Sec 1 For its translation vide, "The Philosophy of the Mazdayasnian Religion under the Sassanids' by Firoz Jamaspii Dastur Jamasp Asa (1889), p 129

All countries and nations have their mythology Our country

2. The study of Mythology The Anthropo is give 1 Mythologists and the Philological Mythologists.

is replete with it and our Society may have this subject as a good field for further work and inquiry Prof MaxMuller and that what we call mythology even in its religious aspect, so far from being irrational

was originally the most rational view of the world, was in fact the only possible philosophy though elothed as yet in very helpless language I in their religious aspect myths as religious symbols have appealed for good to millions of people for hundreds of ages

Mr Dill says on this subject Plate sought an image of the Infinite God in the Sun (Republic Bl. VI p. 508 of Hellenica p 176) Common worshippers adore it under the names of Jupiter Apolle Isis or Mithra. The Great Reality can by any imman soul be only dunly conceived and expressed only in e rude fragmentary way. We see the Divine One in the religious myths as through a glass darkly Yet if we purgo my thology of the gross fancies of rude agos the myths may be used as a consecrated language of devetion. They are only faint shadows of the Infinite One from which we are separated by an impassable gull yet they represent the collective thought and feeling of the past about God. They are only symbols but a religious symbol is doubly sacred when it has ministered to the devotion of many generations?

As to the source of mythology there are two classes of mythologists the Anthropological Mythologists and the Philological Mythologists MaxMuller who was e Philological Mythologists and that language is that source that his opponents the Anthropologists, say that mythology represents the surrival of an old stage of thought and it is not cased by language.

<sup>1 &</sup>quot;Contribution to the Science of Math 1 mg (1557) Ci 1 III.

<sup>&</sup>quot;Homan Sobety in the last century of the Western Limbur " by hancel Dill (1981 p. b.

They believe that human nature is the source of myth. According to their view, they study myths "in situ" i.e in its original situation but the Philological Mythologists study them hortus siccus, i.e., as a collection of dried plants. The Anthropologists claim to study them "in the uniestrained utterances of the people." Both agree, that myths are a product of thought almost extinct in civilised faces. MaxMuller said that language caused that kind of thought, but the other side said that language merely gave it one means of expressing it. Our country, which is full of myths presents for our members a vast field of inquiry into this matter of myths. The cultural branch of Anthropology, wherein we work most, will help the cause of Anthropological Mythologists.

The question of the work and influence of Philology reminds 3. The great its, people of the Aryavrat, of the great Aryan question. Aryan question, because, at first it was merely a philological question. As said by Dr. Beddoe, out of several important Anthropological questions, often discussed at present, two are principal ones, viz—1. The Aryan question and 2. The question of "the degree of permanence of types, of the stability or permanence of form and colour, of the influence upon physical character of media, of surroundings and external agencies."

Of these two principal questions, the first, the Aryan question concerns us most. It was philology that gave birth to it. The discovery of Sanskrit and Avesta—thanks to the efforts in these directions of Sir William Jones and Auquetil Du Perron in our country—and the inquiry of the relation existing between the two and of their relation to the principal languages of Europe, led to this Aryan question. The question, as succinctly presented by Dr. Beddoe, may be thus summed up in its different stages.

<sup>&</sup>lt;sup>1</sup> "The Anthropological History of Europe" by Dr J Beddoe, p 10

- I At first there was no difficulty in believing that all people who spoke Aryan (or Indo-Germanic) lauguages were of one blood. 1
- 2. The subsequent knowledge of the Vedas of the Hindus and of the Avesta of the Parsees brought upon the field the Hindi Aryas and the Persian Iranians The Vedas introduced the Hindi Aryas from the North West and the Vendidad 2 the Iranians from a cold country where there were two months of support and ten of writer.
- 3 So the old Airyana-vaéja the old Airyavrat was located in the regions of the Pamirs the Roof of the World. The modern Galches living in the Oxus and Zarafshan valleys in towns like Shignan and Wakhan who are all short headed and their Badakhshani neighbours and others were taken as representing our Aryan ancestors. They were the rear guard of the old Persan migration while the Kálirs Shishposhis Chitralis Dards etc. were the rear guards of the Aryo-lindu migration. The first offshot from the ancestors of the Gilchas was towards Europe. The next one was that of the high-class Hindu. Then the Persans Kurds &o. The name of the late Prol. MaxMuller is associated to a great extent with this ortholox theory.
- 4 Then came in what is called 'the modern heresy which said that the cradle of the Aryana must be looked at in Europe and not in Asia. Dr. Robert Gordon Lathan first opposed the theory of the Asiatic cradle on the ground that there were far more tryan-speaking men in Furope than in Asia. 'and so instead of denvine the greater from the

than in Asia 4 and so instead of deriving the greater from the less one must derive the less from the great to I urope the home of the greater must be the cradle of the Aryans

<sup>1</sup> Ibd

I Lendal of Chapt I 3-4.

I bor an account of the Lamirs, I would refer my disjarshi seaders to my disjarshi "Dnylin Prasirak Lassys Lart I pp. 150 16%

<sup>6</sup> The Authropological History of Lurepe by 1r John Ballis p. 10

5 Of the European theory or the view that Europe was the cradle of the Aryans, there are several varieties. Some like Cannon Isaac Taylor look for the cradle in Central or Alpine Europe Some like Prof Rendell look to Scandinavia Some German Anthropologists like Poesche point to Lithunia as the cradle, on the ground that the Lithuanic language has a greater affinity with the Sanskrit

In our country, many are still of the old orthodox view of MaxMuller, pointing to Central Asia somewhere near the Pamirs, as the cradle. Mr Tilak has lately treated the question in another interesting way pointing to the polar regions as the cradle

The great Aryan race, the locality of the cradle of which is a

Philology and the two great divisions of the Aryan race, —the Hindus and the Iranians great question, gradually divided itself into several branches or offshoots and dispersed. One of the principal, if not the principal, cause of dispersion was the search for food.

This is, what is called by Huttington, <sup>1</sup> the Bread and Butter theory of movement. Among the different divisions or dispersions, the principal was that of the ancestors of the Hindus and of those of the Iranians. One of the causes of their separation was a schism caused by a difference in the views of some points of religion. Philology has been called to the help of this question of schism.

At one time, the pre-Zoroastrian times, when the ancestors of the Hindus and the Parsees lived together in one place as one race, they had a number of words, mostly religious names, that were common For example, one of such words, very often referred to, was Daêva the word for God, which is still used by the Hindus Another word was Ahura, another name of God.

<sup>ા &</sup>quot;The Pulse of Asia" by Elisworth Hullington (1907). For the details of Hullington's Theory, I would refer my Gujarati readers to my lecture, published in my "Lectures and sermons on Zoroastrian Subjects Part IV ( જર્મેજ્તી ધર્મ સભ્યો ભાષણા અને વાએએ ભાગ ચોધા) pp 195-207

When they separated for religious differences, the words were as it were boycotted by one or the other party. The Irauians took it that the other braigh began to use the word Daeva originally applied to one God for Divine powers or agencies which ought to be otherwise distinguished. So taking that the use of the word was abused, they condemned it and the word Daeva came to be used among them for powers other than those of the one God whom they called Ahura or Ahura Mazda. The ancient Hindus on the other hand similary condemned the word Ahura which was at first commonly used in a good sonse. Thus the use of the words Daeva and Ahura and of a few other words leads to show the existence of the schiem and of the separation of these two great branches of the ancient Trians.

What happens or what seems or threstens to happen now seems to me to present a parallel, though not on all fours and to illustrate what happened in olden times. It is the use of the words Culture and Kultur after the commencement of the present war. The English word Culture is an equivalent for the German word Kultur Upto the middle of the year 1914 both were used in a good sense. But since then the German word Kultur has begun to be condemned hy the high h on the ground that under the name of Kultur the Cormans did a number of things, which are opposed to good real Culture To call a person a man of Kultur" is somewhat resented now though that person would like to be called a man of culture. Through want of communication with the Cermans at present we are not in a position to say what they now think of the English word culture. It would not be surpri ing if they retabate. I would not be surprized if some future I nich h lexicographic would include the word. Kultur, in his work and that in rather a deprayed sense while he would continue to use the word Culture in a good sense. If that state of view continues it a possible that the word fulture nav be condemned by the German and used by German level to phers in a bad sense

One may say that the study of some branch or branches of

4 Setting Customs and Beliefs in their proper position and light

Cultura Anthropology looks like old women's stories and beliefs. At times, some simple folks are nusled into the belief that some of the authors of papers on particular customs

and beliefs believe in those customs and beliefs. For example I remember that when I read a paper before our Society on "Charms or amulets for some Diseases of the Eve', a Paisee wrote to me asking for the amulet to cure an eve-disease in his family. But the fact is that an inquiry into the origin of customs and beliefs sets them in their proper position and light. For example, take the case of the old Indian belief in the Râkshasas (Right) or giants of enormous size. The study of Anthropology with the help of anthropometry

has blown up the belief in human giants Now-a-days it is taken as proved, that, at no time, there ever existed men of a size exceeding 8 feet and 3 inches. That size also was that of an inordinate growth resulting from a morbid process. So, some old beliefs of the existence of a race attaining a stature of the height of 20 feet have all been blown up

Again take the case of the belief in the stories about new kinds of men. In our country, we, now and then, hear wild stories of strange men of new types. They are at times looked at with reverential fear, and those who exhibit them make money from that kind of fear. Even scientific men had at one time a behef in such a class of persons. The story<sup>2</sup> of the boy known as "Wild Peter" is known in this connection. He was found in 1724, as naked brown boy in a village near. Hanover "He could not speak and he showed savage and brutish habits and only a feeble degree of intelligence". His discovery was be-

<sup>&</sup>lt;sup>1</sup> Journal of the Anthropological Society of Bombay, Vol. III, No. 6, pp. 338-45.

<sup>&</sup>lt;sup>2</sup> Journal of the Anthropological Institute, New series, Vol. XI, (1908) pp. 24-25

heved to be "more important than that of Uranus or the discovery of 30 000 new stars. He was taken to be the specimen of the Original man of nature. It was an Anthro pologist Blumenbach (1752 1840) who took the trouble of tracing the history of this wild boy and of showing low absolutely futile all these philosophic theories and varourings had been. He was merely a dumb boy driven away from his father's house by a step-mother and it were the surroundings of a wild wandering life that had given him all the appearance of which some made much.

Now it is not only the customs beliefs and myths of the

5 Nations and
Races. Indian
nation.

myths of the people that anthropology sets
right and shows them in their proper light
but also what may be termed the political
myths of the higher classes. For example take the question of
Racos and Nations

The Anthropological Society of England was preceded by an Ethnologist Society which was founded in 1843. But in the process of time Ethnology was taken as a branch of the larger science of Anthropology. Some of those early scientific men who may be taken now as anthropologist were ethnologists. Blumenbach was such a one. His classification divided men under 5 varieties ri... the Caucasian the Mongolian the Ethiopian the American and the Malay. The Caucasian ho took to be the highest type the Mongolian and the Ethiopian being at the bottom and the American and the Malay intermediate. This classification has varied now and then

The Ethnographical Survey of India manusurated by one of our past Presidents Sir Herbert Risdey has shewn us the exit ence of many races and tribes. The work of the survey was helped on our side by the number of monographs prejured under the editorship of another of our past I resident. Mr Enthoren. The Journals of our Secrety contain several monographs on several tribes. I have contributed my quots in that work by 5 or 6 monographs prepared in the line of ethno-

graphical questions prepared by Sir Herbert Risley 1 The investigations in the subject of Races have shewn that Race is Europe is not divided into races but in different from Nation. nations It is not the principle of race that goes to the building As pointed out by a learned writer, a nation up of a nation may be made up of many races It is the spirit that makes a people a nation and contributes to its patriotism. may come out of "intermingled blood and race We speak of the English nation but it is not the Anglo-Saxon race that has formed the English nation. It is erroneous to speak of the Italians as a Latin race The French form a nation but that nation is of people who are Iberian and Celtic and even have a mixture of the Teutonic and Scandinavian races once celebrated Spanish nation was made up of people of several races The Greeks, the Carthagmans, the Teutons and even the Moors together with the Celtic Iberians built up the Spanish nation Germany, though spoken as Teutonic is not a nation of the Teutons alone It contains people of the Gaulish race in the South and the Slavonic in the East The Austro-Hungarians form at present a nation but they have among them Slavs, Magyars and others also

We remember, that at one time, when criticising the attempts of the educated classes of this country to rise in the matter of their higher political aspirations, the critics said that India, as it is divided into a number of people of different races and creeds, could never be a nation. We see from the above view of races and nations, that that view cannot hold good. The modern view of the Anthropologists or the Ethnologists supports the view of the educated classes of the country, that, in spite of its numerous races, India can be a nation. We have now seen, from the very commencement of the present war,

<sup>&</sup>lt;sup>1</sup> Journal of the Anthropological Society of Bombay, Vol III, No 8, pp 471-83 Vol. V, No 8, pp 458-465 Vol VII, No 1, pp 68-82" Vol. VII, No. 8, pp 521-25 Vide my "Anthropological Papers" Vol I. pp 66-80, 158 66, 208 24, 263-67 Vol II, (In the press) p 1 ct seq

how India, in spite of its numerous croeds and races has risen as a nation to stand by the side of its British rulers. The late M. Renan very properly said A nation is a hving soul, a spiritual principle the result of the will of peoples united by a common consent in the interests of the community has, at this time risen as a living soul. One may perhaps safely say that old India was never a nation, but he cannot as safely say that modern India the hearts of whose people throb like a living soul," is not a nation. If he says so he does a great mustice not to the people only not to the ruled only but to the Government also to the rulers also as if the paramount power of the British uniting the people under one rule and inspiring them with some common aspira tions was after its Pax Brittannies of number of years not able to raise the mixed races of the people to the rank of an united nation

The question of one Indian nation and the want of History in Indian Literature

Mr Macdonell attributes the want of history in Indian Literature to two causes. Firstly India never made any history The ancient In dians never went through a struggle for life like the Greeks in the Persian and the

Romans in the Punic wars such as would have welifed their tribes into a nation and developed political greatness. Second. ly the Brahmans whose task it would naturally have been to record great deeds had already embraced the doctrine that all action and existence are a positive evil and could therefore have left but little inclination to chronical historical event Mr. M cripdle gives well nich the same as the second reason given by Mr Macdonell when he says "Absorbed in decout meditation in the Divine Nature etc., they regarded with indifference the concerns of the transitors world which they accounted as mayo (unreal)

As to the valulity of the first capu it may now safely les sail that though even now there is no struggle for his in

A Ristory of Samkrit Literature by Antur L Manhaell (1990): 11

the wallike or military sense there is a kind of stringle for life to rise higher in all kinds of aspiration for greatness. As the result of a comparatively long period of peace and advancement under the rule of the British, one "hying soul," inspires them to advance and rise higher not only in political matters but in all walks of life or spheres of activity. This is what makes the modern Indians a nation in spite of there being numerous tribe and castes.

We see from what is said above, that a common "struggle for life leads to a certain extent, to the formation of a nation and its listory. We are now in the midst of a great war imprecedented in the known history of the world, wherein more than one belligerent power has said that it is a "struggle of life" for it. From this point of view, what Ruskin says on the subject of the influence of war on progress of art among nations is interesting. He says. "All the great and noble arts of peace are founded on war, no great art was ever yet born on earth but amongst a nation of soldiors."

In connection with this question of the possibility of one nation being formed from a number of races, I would draw the attention of our members to the Report of the Congress of Races 1 and to its article on "International Problems". The writer therein tries to show that the coloured or black races are not necessarily savage and the white races superior. Just as cultivation "modified the intensity of colour in plants and animals" so cultivation modified the intensity of colour in man. But there are various views on the subject, and nothing has been settled upto now about "the skin-colour of the early stem-form of man."

Buffon, known as the French Plmy (Boin 1707), Camper (1722 1789), Blumenbach (1752-1840) and Prichard (1786-1848)

<sup>&</sup>lt;sup>1</sup> I would draw the attention of our members, who like to know of a pretty full Bibliography of Authropology, to this book p 403.

taught that the different races of men formed one species and that they came to be distributed over the whole world by dispersion. There was transmission of occasional variations, which

accounted for the diversity which characterizes the different races. Buffon and Blumenbach hold that the original skin-colour was white and that the different shades seen in the different races were later acquisitions. Prichard was of opinion that the original pair from whom all mankind has spring were black. Civilization had operated upon man kind so as to reduce the pigment in the skin and produce the white varieties.

Civilization, whether it modifies the intensity of colour or not is not the monopoly of the white moe. The East was at one time the cradle of Civilization. It taught it to the West which become its centre. Thus the East was the teacher and the West the pupil. But the scales have now turned and the West, which was at one time the pupil has now assumed the roll of being the teacher of its withelm teacher. As a learned Chinese author has put it. "The law of nature is spiral and inasmuch as Eastern civilization taught the people of the West so Western civilization which is based upon principles nature to the East will return to its original source." Let us hop with the writer that the former master (the Last) going back to the school of its former clever pupil. (the West) may equal it not again surpas, his clever pupil.

In the consideration of some broad questions of races

The knowledge of Physical Geogra phy required in the consid ration of some broad question of races. mation of some broad questions of races a knowledge of the Physical Geography—both amount and modern—of the world is necessary. It is such a knowledge for example that helps ethnologists to determine the characteristics of the people of India and

Australia Mr Thorston in his " Castes and Tribes of " ithem

The Journal of the Anthrophydeal Institute New series 1/4/1 p. \*\*

1 "America and the Americans from a Chinese point of reset by the Chinese field in 186

(Nu Timefang (1914) p. 186

India" (Vol I) says that the present aborigines of Australia and the Dravidians of India, who were the former aborigines of the country, are of the same type. The reason assigned is, that, at one time, both the continents were united. The very name Australasia shows this. The common type is also the same

With the question of the race, comes the question of the tiansmissibility of acquired habits, as to how fai they lead to modify the race. It is as said above, one of the two principal anthropological questions of the day.

Prichard and Lawrence were the first two English scientists who first clearly said, that "all acquired The nontransmissibility of conditions of the body, whether produced acquired characby art or accident, end with the life of the ters individual in whom they are produced "1" "The offspring is not m the slightest degree modified by them (external causes) but is born with the original properties and constitution of the parents and a susceptibility only to the same changes when exposed to the same causes, ... .Climate, locality, food, and mode of life exercise a most potent influence in altering and determining the physical characters of man,.... but these effects are confined to the individual, they are not transmitted to the offspring and have, therefore, absolutely no influence in modifying the race The environment or external influences are outside the range of the conditions which produce racial Racial differences can be explained only by two principles, viz, the occasional production of an offspring with different characters from those of the parents, as a native or congenital variety, and the propagation of such varieties by generation"2 I am notable to speak at first hand on this great question of anthropologists, but I may here merely draw attention to the fact, that the ancient Parsee books speak of

<sup>1</sup> Journal of the Anthropological Institute of Great Britain and Ireland, New series, Vol. XI, p. 33.

<sup>&</sup>lt;sup>2</sup> Ibid

two kinds of knowledge (1) Assideh therad 1 e innate wisdom ar knowledge acquired or inherited from birth and (2) gaosho sruto therad 1 e acquired wisdom or knowledge acquired through learning and observation and influenced by surroundings of these two the first, vz... the innate or heredited is hold to be that of higher importance. But this is a great question still requiring a clear solution. As said by Prof. Ridgeway—the grand riddle of the true relation between heredity and environment has yet to find an Edipus to solve it.

Though anthropology is divided into two main divisions the Physical and the Cultural and though 8 Help to questions of Physical anthrotho study of the former is more technical pology from the still the study of one belos the other anthropology Even to the atnotly accentific physical Anthropologist, a knowledge of the customs manners and beliefs of the people is necessary. This knowledge not only helps him to be careful in the case of some diversities or differences from his general conclusions but also helps him in his seventific conclusions by the occasional upport he receives from traditional beliefs. For example take the question of the belief about the Origin of Man Whenco camo Mant Did he grow or was he made ! When put in another way this question is What is the Origin of Man and the Origin of the World ?

Most of the old existing religious of the world take Man to be the control of the control of Man, as given by the Bun dehesh.

The state of Cold a creations for example the Parsec religion gives the below the Bun dehesh.

The state of the world take Man to leave the leave of the following order. The state of the carth plant animal and man. Later Lursec.

books connect the creation of three six with the six Gahambers of periods of creation? Now though man is poken of a creat t

<sup>1</sup> Lit Wind imbegral thing the ears but it wind else may be take in a very broad sense in the sense of lear sensing bethat thicking etc.

I Journal of the Anti-ropolog, al Institute of Creat Hinta in Norwester Not NHI p. 16 The Street CE and Street

and God is spoken of as Creator (Dataie), the Pahlavi Bundehesh speaks of the origin of man as proceeding at the hand of God from a lower form of life—from vegetation. So, though man may be considered as a result of the creative work of Ahma Mazda, he is not a creation in the sense of "something out of nothing".

We read the following in the Bundchesh on this subject the subject of the Nature of Man it is said in religion, that Gayomard 1 gave forth his seed at the time of death. That seed was purified by the work (lit motion) of the light of the sun Neryosang guarded its two parts. One part was accepted by Spendaimad (the Yazata presiding over earth) In the form of Rivas (a kind of tree), which grows like a column during 15 years with 15 leaves, there grew up Mashi and Mashyam 2 from earth, after 40 years, in such a way that their hands were backward on then shoulders, they were united with each other and were of the same height and of similar appearance. The waists of both were united and they were of a similar stature in such a way that it was difficult to recognize which was male and which The soul (or life) was first created and was female ..... Both came into the form of man from then the body the form of a tree 3 "

Without entering into the details of the old Iranian tradition, what we find from the general purport of the passage is this Gayomard or the primitive man grew at the hand of the Creator from a lower form of creation, viz, a particular kind of tree or vegetation. Then, from Gayomard or the primitive being or form of existence, there arose a number of animals or living beings of various types, even tailed beings and harry beings 4

<sup>&</sup>lt;sup>1</sup> The first primitive being, before the sexes were developed

<sup>&</sup>lt;sup>2</sup> The Iranian Adam and Eve

<sup>&</sup>lt;sup>3</sup> Bundehesh, Chap XV, 1-5 Vide my Bundehesh, pp 59-61 S B E Vol V pp 53-54

<sup>4</sup> Bundehesh, Chap XV 31 Vide my Bundehesh, p 67.

Looking to the broad features of the tradition what we learn is, that Evolution is involved in Creation and Creation involved in Evolution. The Zoroastrian theory of the Fravashis or Farohars, which are to a certain extent comparable to the Ideas of Plato and to the proto-types of the Bible does not shut out the dea of evolution. The very fact that all the living objects whether men, animal or vegetation have their Fravashis or Farohars, existing at one time even before their creation or appearance as such in this world permits this idea of gradual dovelopment or evolution. Thus as Dr. Munro very properly says " oven the acceptance of the so-called orthodox view etc. that a malo and a female were originally specially created, from whom all the present varieties of man kind have descended would by no means get rid of the evolution theory."

For another example of the influence of questions of cultural Intermixture of anthropology upon those of physical an thropology take the case of the large anestion of moss which is studied by Ethnography and Ethnology Different groups of races have their distinguishing characteristics, both physical and mental. But a knowledge of the history -both traditional or unwritten and written-of the group or its divisions is necessary to come to proper conclusions For example take the great Hindu community It is generally a non-proschitysing community at present Some of the orthodox part of the community even object to readmi sion of converted Hindus who want to return to the fold of their fathers. Though that is the fact at pre-ent it is shown by some scholars from historical materials that the Hindu community at one time and that not very remote had a large admixture of alien not only Indians but Creeks and even some Iranians The late Sir James (amplell a franced that view and Mr. f. Bhandarkar has supported him Is

I lie It. Manroe artist on Anthry buy in the Largeleped a of Religion and Ethics Vol. I col = 1 ort

his several learned articles, which have gained him the Campbell gold medal in 1911

Among the Hindus, the Brahmins are generally believed to have preserved the pure old blood of their fore-fathers and they are very particular about caste distinctions But, m some of the old ceremonies, the ancient Rajas requisitioned lacs of Brahmins When that number was not procurable, non-Brahmins were made Brahmins for the time being times of emergency, class-distinctions are forgotten even now

The question of the differentiation of the different laces of Questions of Man's Handierafts,

Food, Dress, Habi-tation, &c.

Man follows that of the question of diffcientiating Man from animals It is the handicrafts of Man, his habits of food, dress, habitation, &c, that differentiate him

So these different questions are important from other animals questions of cultural Anthropology

Dr Munro says on this subject "Man may be differentiated from all other animals by the fact that he is a skilled mechanic and manufactures a great variety of objects which he largely utilizes instead of the organs of offence and defence with which nature originally endowed him In heu of the specially developed teeth, claws, horns, hoofs, etc, used more or less for these purposes by other animals, man has provided himself with a multiplicity of knives, axes, swords, spears, arrows, guns, etc. through the instrumentality of which his self-preservation is more efficiently maintained "1 What Di Munro says about a particular kind of tools of Man-the offensive and defensive toolscan be amplified, enlarged and applied to all his handicraft products, in various directions and in the various spheres of his life as a man

This leads us to speak of his (a) food, (b) dress, (c) and habitation, and of (d) his relations with fellowmen, among which relations even was has an important bearing 'For all these', India presents to us a vast field for further inquiry

<sup>1</sup> Ibid Vol I, p 566

Man at first lived upon wild fruit and herbs. They were eaten uncooked. The use of fire for onlinary purposes was unknown. In the old history of ancient Irân, King Hoshang, the founder of the Peshdadian dynasty is said to be according to Firdousi the discovers of Fire. While roving about, he once saw a serpent, and lifting o stone threw it against it to kill it. The stone struck ogninst another stone and kindled fire by friction and ignited things round about. He pucked up the fire and shrined it as the symbol of the Divinity

Fire subsequently began to be used for onlinary purposes.

The use of animal feed come in later. It was in the time of Zohik. Ahrman or Satan wanted to mislead this young prince the son of a plous father Mardis by name ond to gel him to commit the sun of parricule So he (Satur) assumed the shape or disguise of a cook and entered into his service as such Ho introduced into his culsing the use of eggs a delicious dish from which pleased the young prince. This was the first use of animal food in the world which hitherto lived upon fruits and herbs. The relish of this food of eggs and such animal food made the cook (Satan) a favourite with the prince who under his influence committed parricide. Zohak dug a deep pit in the usual path of his pious father who while going to say his early morning prayers in a quiet corner of his garden fell into Thus, it is that animal lood is believed to excite animal passions and is abstained from svin now by mans a religious class and religious minded person.

Now the above Iranian tradition of Ahriman or Satan introducing the use of animal food among mankind can be looked into from the climatic point of view. According to the Vendidad and other Iranian books temperate weather with gift of God and the extreme rigour of wintry cold is the production of Ahriman 1. According to the scientists the

glacid period—the creation of Ahiiman according to the Iranian tradition—when most of the northern hemisphere was covered with ice, led to the use of animal food. With the advent of the ice, man began to feel the pinch of the want of food in the form of wild fruits and herbs. So, they were obliged to have recourse to animal food. With the advent of the northern ice, land abounded with mammoths, reindeers, bisons, etc. These served as food. Not only was it, that the comparative scarcity of wild fruits and herbs that led to the use of animal food, but also the extreme rigour of the cold which necessitated the use of heat-giving animal food. What we now know to be the case in the Arctic regions according to modern explorers, was ordinarily the case in a great part of the world in the glacial period.

In the consideration of this subject of man's food in the Glacial period, we thus see that food has a good deal to do with climate One may look at the Glacial period of the history of the world as the pre-historic times But even in historic times, climate scems to have had an influence upon the history of nations During this month, in the present war, the fighting nations of Europe have, as it were, ceased fighting actively. They are waiting for the advent of the spring and the passing off of winter But, it was not so about 2,000 years ago when the ancestors of the modern Germans were fighting with their then enemies Instead of waiting for the spring, they waited for winter to make their invasion The hordes of Central Asia and even the northern hordes of the country now occupied chiefly by the Russians waited for the winter, so that the rivers and other large sheets of water, may be frozen and thus give an easier march to their large armies Those days of great Even now, during the present war, we lately cold are gone lead that Russia was looking anxiously for the fleezing of a river in its way, so that it can cross it easily with its army.

This little peep into the past history of the world shows as it were, the past history of the evolution of the use of food among mankind. Not only that, but it presents a view of what

may be called the heritage of food among modern nations. With the change of a country one cannot change at once his food, which comes to him as it were as inheritance. His inherited body or constitution cannot get rid of the inherited tendency easily Thus, we see that ancient India a hot country required less of animal food. The Iranian view presented by the story of Zehûk, and Ahriman, riz that animal food is het and excitee passions, while vegetable food is cold and subduing passions leads to a calm contemplative mind is also the view of meditativo India. India has asked its Brahmins the literary meditative class to abstain as much as possible from animal food but it has to a cortain extent permitted its Khshatriyas its warrior class to use it. On the whole however the Hindus are a flesh-abstaining class But the Mahomedans who have originally come from the northern celder countries are a flesh eating olass

In the matter of food many a community is at times guided by some of the requisitions of their religious books. But at times these injunctions are put aside under one excuse or another For example if not the founder the carly followers of Buddhism asked their disciples not to kill and thus to abstain from animal food. They fixed in India and preached in India But during one of my several visits to the Cunpayor monasteries of the Tibetan Lamas at Darleeling in May-June 1913 I was surprised to find in one monastery a modern meet-safe with a large piece of beef. On asking for an explanation for the breach of Buddhistic teaching I was told Buddha said Do not kill so wo do not kill but we cat what is killed by others. Again strange to find that though they are beef mutton &c they abstalned from eggs and fish. They thus justified this customs "It is better to take the life of one being and to have one large animal like a goat or car killed t feed about the or three dozen of men from it feel than t take the flyer of hundred to felth rame number been en large number of egul or this would be required to first that

number" It is the rigour of the Tibetan cold that has compelled them to have resort to this kind of sophistry

Heritage and association both go together to help the tendency of one kind or another. We have at times differences and even, at times, riots arising in India on the question of killing cows and other animals for food. In the consideration of such questions, mutual toleration and sympathy based on some of the above anthropological views are likely to create better understanding

With the gradual change in the habits of food, from period to period and from country to country, came the discovery and use of the utensils of cooking from some simple utensils to a little complex machinery. Even now, we see in an advanced city like Bombay culinary tools or utensils in all grades of progress. For example, it is not rare to see, as in old times, people using simple shells of cocoanuts in place of ladles and even cups. Our society's museum had some specimens of stone implements, among which some can be said to belong to the cuisine; for example, stone-knives. Our Journals contain two papers on such stone implements.

Climate has affected the question of man's habitations. The primæval man, who lived on wild fruits and herbs, generally lived in woods on the banks of rivers and such other collections or sheets of water. With the advent of the greater cold of the glacial period, he had to resort to caves for protection from cold. The advent of the cold period led him to the use of (a) animal flesh as food, (b) of animal skin as dress, and (c) of caves as dwellings. The severe climate led to an improvement both in his physical and mental habits. With this improvement came the improvement in the form of habitations, from caves to huts and from huts to houses

In the history of Irân, both according to the Avesta (Vendidad, Chap II,) and the Persian Shâh-nâmeh, it was the time of

king Jamshed and his dynasty that can be pointed out as the time when the great cold led to the art of building well built houses

The question of the heritage of dress presents some views similar to those of the heritage of food, Primaval Dross. Man, as reforred to in the Biblical history moved naked. One may say that it is rather an anachronism to say that the thought of sin led Evo the first mother of man to an idea of shame and thence to the thought of covering her body with leaves Nevertheless it is true. It is a stage in the history of man solvilization when man, and especially woman considers it a subject for shame may oven sur-and sin is a kind of tresposs on paths forbidden by society -not to be dressed properly according to the inherited or acquired habits and practice of dress. Primaryal man moved about naked. As time went on the change in his physical conditions and surroundings led him to cover his body with leaves to withstand a certain state of weather. The advent of the Glacial period as said above. led to the destruction of woods and forcets which gave him both food and leafy dress. With the advent of the same Glacial period and its ico fortunately from this point of view, there came in wild animals whose flesh served as food and akins as dress. The vigour of the changed climate had necessitated a change in both-food and dress-and that change was gone through the wild animals supplying both. Mr W M Webles The Heritage of Dress given us an interesting reading from this point of view and shows how our present dress has as it were evolved from the primitive diess. A more chad for without sleeves or payamas put on impromptu even now by many a person gives one an idea of the first or primareal dees Sleeves and purposes collars and purkets and all such things are later evolutions or developments.

Man at first used his teeth han fe and feet for often fro and limpfement of defen its purp see justs other animals now use that teeth else horn and half for indicting at a teeth of the primitive last are so ye

even now, man, when he displays his animal nature, speaks a language that displays that tendency As said by Dr Diummond, 1 man is, as it were, built in three stories. It is, as it were, on the ground floor that dwells the animal in him. In spite of numberless ages, man's language betrays his former nature Taking for example, the Gujarati language generally spoken in our city, we hear men, in the heat of their anger, speak phrases like "તુને કરડી ખાવશ, તુને ચીરી નોખીશ, તુંને કચરી નોખીશ," phrases which lead to show that man at one time used his teeth. hands and feet alone for offensive and defensive purposes With his gradual mental development, he, following the old adage "Necessity is the mother of invention" which, as Dr Munro says, was as true in the primæval wild state as in the modern civilized state, began to make various tools and implements, at first for offensive and defensive purposes, then for culmary and domestic purposes, then for decorative purposes and so on This consideration lays before us for survey an extensive field, from the rude stone and flint implements of the rude age to the gunnery and the aeroplanes and seaplanes of the present day warfare

At first ordinary stones and pieces of wood served man as such implements—implements not only of offence and defence, but of ordinary, or, what, we may now call, domestic purposes. Man and even woman, when they have to fight impromptu for offensive and defensive purposes, even now resort to the use of stones as missiles. From the use of rude pieces of stone to the use of stone implements was another step. We have a number of such stone implements in our Museum which has now been absorbed in that of the Bombay Branch of the Royal Asiatic Society, and we have two papers in our Journals 2 which speak of them. These primæval stone implements are spoken of at times, by scientific men as "eoliths" ie, stones used in the dawn (of civilization)

<sup>1 &</sup>quot;Stones rolled away," by Dr Drummond (1900), p 128

<sup>&</sup>lt;sup>2</sup> (a) A Note on a Stone Pot found in the Graving Dock Excavations by Mr W. F Sinclair (Journal, No 5, Vol II, pp 243-46 (b) Some

The next stage was that of the use of finit implements known as palseoliths. These finit implements are said to have come first in use in Africa whence they came into Europe rid the different isthumuses or land bridges in the Mediternnean which according to the Geologist then connected Africa and Europe Similar land connections are said to have once existed between our Asiatic continent and Australia or Australians.

The study of the subject of climate is a part of the study of

Severity of oil mate, leading to the improvement of the race. Increase in Birth rate. Male Birth rate.

o sunject of olimate is a part of the study of physical geography. In the consideration of the questions of food dress habitation &c. who saw that the severity of the cold glacest period led to gradual improvements in handierafts or tools required in the acquisi

tion of these necessities. This brings us to the question, that both the severity of cold weather as well as the severity or austerity of life lead to improvement both in body and mind For example take the case of war. The severity or austerity of life during a war is said to lead to the improvement of the race One may be led to say that the death of the young of the community the flower of the people may cause the loss of the birth-giving or generating portion of the community. But no it is estimated that the ratio of birth rate per thousand in creases after war instead of decreasing. Again, in this increase of birth rate it is the birth of males that predominates over that of females The reason is this During the war the youth. that participate in it have to lead a hard abstemious life instead of an easy luxurious life So the survivors after war return to their countries much strengthened in body and thus, in a better frame of body for the purpose of procreation. The few strong that survive give rise to a better birth rate than the many weak

rude Stone Implements from Back Bay Middle Colabs Hombar by b Swymerton (Journal No 4 Vol. III p. 189 97)

Mr. 11 W. Seton kare has presented to our Society some ancient stone implements of palged the type I wenered by him in the Medical province near Renignita (1 sits Jo and Na. 6, N. 4, M. 1911, 2014).

before the war. Again, the same cause which gives a higher birthlate generally, gives a higher birth-late of males than of females. Women remaining at home, if not actually weakened by eares and anxieties for their absent men are, at least, in the same physical condition, but the males have, as said above, much improved. The superiority of males in physic over the females gives a higher birth-late of males, because, it is said, that it is the physical condition of the partner that determines the sex. If the male is stronger than the female at the time of conception, the chances are that the sex of the child will be male, and vice versa. The statistics of births in the different months of the year also point to the fact that the cold months are healthier and make the people stronger, and so, conception generally takes place in the months of winter

Geologists divide time into several periods, in connection with the climate of our earth. Among these ization periods, the glacial period, when, according to the geologists, the northern hemisphere was covered with icc is an important period in the history of man's advancement in the scale of civilization. We saw above, that it had its influence on the use or evolution of food, dress, habitation and implements

There is a vast field of inquiry for our members in the matter Indian games and of our Indian games and sports. Games sports and sports have mostly their origin in religious ritual and ceremonies "Children are both imitative and conservative". So they imitate the religious rituals in their games. I have a vivid impression of this initiation by children of solemn religious rites. When a child, I, in company with other children, used to imitate in play the Muktad ceremonies, more popularly known as the Dosla ceremonies. Potters their prepared for sale to children small earthen utensils and firevases, to play with. A Parseo sees, at times, his children initiation.

<sup>&</sup>lt;sup>1</sup> The Handbook of Folklore by Charlotte Sophia Burne (1914) p 482

ing in play his religious ceremony of the Afringan or the Ashirwa'd (marriage-benediction). Not only do children perform or imitate the occamones in play but they also try to imitate and reorte mimically the prayers. Parsee priests recite certain prayers in Bay or suppressed tone spoken of his some writers as zam zameh. Parsee children imitate that kind of reortal and their hun kun kun (4 5 3 ) is familiar. With change of times the original rituals and ceremonies may possibly pass away giving place to some new forms, but the children who are conservative may retain and continue them till it may be difficult to identify them and to trace their origin.

Modern tableaux circuites are in several cases intermediaries between selemn ritual and play. When our present queen Empress Mary came to Bombay as Princess of Wales, some Parsee ladies, who thee took an active part in organizing in her honour an entertainment at the Town Hall thought of exhibiting the above-said Muktad ritual but the exhibition was wisely omitted as it was thought that an exhibition like that would hurt the religious susceptibilities of some Now in the case of at least some of the Parece ladge who had uon templated that exhibition of the Mukind ritual it may be saki that they did not observe that ritual in their own bousehold as the result of some evolution in their thoughts about religion and religious rituals, but still they thought of exhibiting these as a kind of ontertainment and play. This fact tries to illus trate the belief that games serve as fossils and preserve some old rituals

With the question of games and sports is associated the question of dancing. The author of the chapter on games in the Handblock of folklore says. Dancing in connection with sacred cerumonial i to be found in all climes and in overy country. It is not external in Ecrope. Upto a lew hundred years ago, some Christians provided in their testaments that on certain days religious dancer may take place in Churches. But in no country is

dancing so much associated with religion and with places of worship as in India. The practice has brought into existence a class of women-singers and dancers who are attached to temples. However pure and spotless the original association may have been at first the modern degenerate condition of that class has aroused the suspicions of Indian reformers and they are asking the Government to interfere. We do not expect this religious dancing to die out soon, but still it is advisable, that before it is too late some members of the society may take up the question and collect materials and facts to trace the origin of various kinds of Indian dances.

In connection with this question of the connection of dances with religion one is reminded of the devil-dances of Tibet I have given, in one of my papers on Tibetan customs before this Society, a picture of this devil-dance. When I was at Darjeeling in 1913. I tried to have a devil-dance performed before me, but the Tibetans of the *qumpas* or monasteries there have now risen to some sense of respect and reverence for this religious show, and they refused to show it for love or money. It is only on a certain holiday that they perform it once a year.

The authoress of the Hand-book of Folklore, in her interesting chapter on games, sports and pastimes refers to "Raginath's festival dance during the great fair in Kulu. When visiting the Kulu valley of the Himalayas in the Punjab in 1900, I had the pleasure of seeing the rath or chariot used in the festival and heard a good deal about the interest the dance created at Sultanpur the capital town of the valley.

I began my address by thanking the Society for having elected me to the chair during the past year. I conclude by congratulating it for electing to the chair, for the ensuing year, the Hon'ble Mr. Claude Hill, a gentleman of wide culture, whose learned speeches we have heard with pleasure and profit from the platform of many a society and institution in Bombay, and whose learned address we hope to hear one day from our platform.

### A NOTE ON "THE WOMEN'S HUNT (JANI-SIKAR) AMONG THE ORAONS OF CHOTA NAGPUR

(Prendent-RAO BAHADUR P B TOSEI )

(Read on 26th January 1918.)

Mr Sarat Chandra Roy in his interesting book on the Oraons of Chota Nagpur 1 thus describes What is Wowhat is called Jani-Sikhr is. Women a men a Hunt Hunt or Mukkasendra --Once in twelve years, Orion maidens with generally a sprinkling of married women no out on a pretended hunting expedition, armed with lather (sticks) spears and axes and wearing pagers or turbans on their heads. and pichourts or cloth sheets wound round their bodies in the manner of men one female from each Orden family must join the hunt. Arriving at the village next to theirs in a parti oular direction they go to the Akhra 2 of the village whem they dance for a while. The wife of the village-Cornit accompanies them with a pagera or drum. Then they chase a pig belonging to some Omon of that village. And if they cannot or do not kill a pig the men of the village make up the price of a pig. by raising a subscription amongst thouselves and pay the amount to the female hunters. If a pig is killed by these female hunters the money thus rused is paid to the owner of the pig in way of compensation. The women of the village where the pig is killed in their turn proceed in similar guise to the village next to theirs in the same direction as the

<sup>1 &</sup>quot;The Orions of Chita Nagpur: The r History Economic Ld and Sec 1 Organization (1915)

<sup>2 4</sup>khm is the dancing ground for the leach loss of an Orion's Haz

<sup>2</sup> The village Goralt I a vill go leading who perform miscelland a finet one. I the vill g from that of a presemper to that of a ferry-th 1 [p \*]

direction of their own village from that of the female hunting party who just visited their village"

Now, as to the origin of this 'women's hunt', Mr Sarat

The Hunt a rite for transferring belong to a class of ceremonial expeditions undertaken with the object of transferring, by magic, ical or fancied calamities from the country. To this class belong the two varieties of the Rog-khednâ¹ expedition one undertaken by men and the other by women—generally married women.

Mr Saiat Chandra Roy then describes, at some length, the Rog-khedna or the disease-driving expe-The Rag-khedn a disease-driving dition According to his description, "when expedition a rumour is somehow set affoat that some unusual misfortune has occured to eattle men who have to undertake the Rog-khedna expedition when, on the other hand, the rumoured calamity refers to . it is the duty of the Orâon women to underchild-birth take a similar expedition . The women sweep the floors and court-yards of then respective houses and clean them with cowdung and water. The sweepings are then carried to the nearest stream or pool of water and thrown away women return home, bathe and, in some villages, the Pâhân or Pahânâm 2 burns meense at the village pâhân s house. Then men or women, as the ease may be, go out from house to house in their own village, carrying one or two bamboo-baskets, a brass lota and a few mango twigs, and iccoive a handful of nce of mâruâ from each house. Then they proceed to the next village in the direction opposite to that in which the calamity is said to have occurred. As soon as they enter the next village in that direction, they go from house to house with these baskets and at each house receive a handful of rice or

<sup>1</sup> t e Driving out a disease

<sup>2</sup> s, e the village priest or village priestess

marua Then they proceed to the second village in the same direction and collect doles of rice marua &c in the same way Thus after finishing three villages including their own they retire at mid-day to some selected spot on the outskirts of the last village they visited boil as much of the rice or marua as they require for their mid-day meal and eat the food thus prepared Then they sell the balance of the rice and marua and with the sale proceeds buy liquor with which they cheer up their spirits and then return home. Next day the men or women as the ease may be, of the villages visited the preceding day start on a similar expedition in the same direction And thus the calamity is driven away from village to village till it is altogether driven out of the Orion country

The original idea behind the practice is a magical

transference of the calamity

The above interesting description of the Women's Hunt

The Mataus-rath. a recresponding diseased riving procession in the Bombay Presiden and of the Rog khedna expeditions reminds us of what is known as Matapa-rath the the Charlet of the Coddess in our Bombas Presidency In my paper entitled (hariot of the Goldess (भारतमी रप) क

supposed remedy for driving out an epidemic read before this society on 30th June 1897 1 J have referred at some length to three cases of such disease-driving processions that came under my notice. In these processions diseases like plague and cholera are sought to be driven away from village to village. Sir James Frazer in the sixth part of his Golden Bough entitled the Scape-Goat refers to this paper of mine and takes it as an instance of the scape-goat in his theory of the use of the Dying God as a scape-goat to free his worshippers from the troubles of all sorts with which life in earth is beset case of the chariot of the Goddess a goat or a cock plays important part

The Scape Goat (1912) p. 184.

I Journal of the Anthrops logical Secrety of Bombay Vol IV No # pp. 410 \*6 Fide my " Anthropological paper | I art | pp 96.103

Mr Sarat Chandra Roy's account of the Women's Hunt among the Oraons, reminds us also of the The Devil driv ing procession of the libetars davil-driving processions, of the Tibetans, referred to by me, in my paper before this Society, entitled. "A Devil driving Procession of the Tibetan Buddhists as seen at Darjeeling, and a few Thoughts suggested by it 1 In this Devil-driving procession, the Tibotans drive away, among other devils, the devil of disease and sickness, by throwing in the valley as a seape-gont a small wooden This procession is followed the next day by a Bookprocession, wherein they carry their sacred books in the form of a procession through the village. They believe, that after the devils are once driven off the sacred scriptures bring all happiness to the village

These processions remind us of the religious processions of the Christians intended to drive away pestilences. When Rome was visited by a pestilence in the sixth continy, St Gregory, afterwards Pope Gregory, had advised, that a procession may pass through the streets of Rome singing litamos, and he himself headed such a procession 2

The Holi festival, a kind of devil drive he are detired people than of agriculturists in a rite is also a kind of devil-driving ceremony. The burning of one or more logs of wood on the full moon day of the lunar month Falgun, symbolizes, as it were, the burning of the old year with all its faults, evils and diseases. It is said, that among the hull tribes of Mirzapur, the rite of burning a stake or log by the Baiga (Devil-priest) of the village is actually

known as Sambai jalana, e.e. burning the Old Year 1 (samvat) In Napal they burn a decorated wooden post on this occasion

The celebration of the Holy festival, at a place named Bersana reminds us of the above Women's Hunt or perhaps of what may be called, Women's Battle — On the first evening a mock fight takes place between the women of the village armed with bamboos their faces wrapped in their mantles and the men of a neighbouring village carrying stags, horns and round leather shields — In Bengal, a sort of Guy Fawkes like effigy termed Holka made of Bamboo laths and straw is formally carried to it (i.e. the fire) and committed to the flames — On the third day — there was another mock combat between men and women — 2

# SEX IN BIRTH AND SEX AFTER DEATH.

(President—The Hon Mr W D SHEPPERD, CIE, ICS)

(Read on 23rd February 1916)

This paper consists of two parts 1 Sex in Birth and 2. Sex after death. The subjects of these two parts were suggested to me by the following two articles —

- 1 An article, headed "In the learned world", in the Academy of 15th August 1914, pp 207-8, wherein the author speaks of the "Influence of War on the future Population"
- 2 An article, entitled "Sex after Death", in the Nineteenth Century and after of September 1914 (pp 616-30), by Mr Norman Pearson

On the question of the "Origin of Sex" from the Scientific point of view, Mr Pearson speaks thus -Mr Pearson on "Nowadays sex is associated with reprothe Origin of Sex. duction, and is regarded merely as part of the machinery for the perpetuation of a species As a matter of fact, however. the process from which it sprang had no direct connexion with reproduction, and aimed at the benefit rather of the individual than of the race Reproduction in its simplest form, as it appears in unicellular organisms, is merely division. The parent cell, when it has attained its limit of growth, breaks into two halves or daughter cells, each of which possesses an independent existence The daughter cells, in their turn, break up into other cells, and so the species multiplies In cases of this kind the cells and the reproductive process are alike asexual, and the reproduction may be regarded simply as a growth beyond the limits of the individual organism however another process which takes place between unicellular organisms, and which is known as Conjugation Essentially

this consists in a fusion between two full-grown single-cell organisms which range themselves alongade of each other for this purpose and gradually coalesce. After the union has become complete and the two organisms are enclosed in a single cell-body a separation once more takes place by single division and two new organisms are formed between which the germ plasms of the two original organisms are divided. This is the process from which sex was originally evolved. 1

After thus dwelling on the question of the Origin of Sex Mr. Pearson thus speaks of the cause principle The Cause, deter mining the Sex. or influence which determines the sex ' We now have to face the equally difficult question of its (sex s) doter mination. What is the principle or influence which regulates the sex of the offspring ! Or as we are here chiefly concerned with the human race what is that which determines the sex of each human child! Various explanations have been sug gested, such as the time of fertilization the age of the parents their comparative vigour or the influence of nutrition. None of these however are entirely satisfactory and Mendelism has recently suggested an explanation which seems to be nearer the truth "s

The above Mendelism which has received its name from Mendel who chiefly experimented with peas, is thus explained Excluding parthenogenesis sovery multiby Mr Pearson cellular individual be it plant or animal is the product of a combination of two distinct soxual cells the male sperm-cell and the fomale ogg-cell These cells are called gametes (paring cells) and the individual produced by this union is called a zyrote (the product of a voking together) Now the zygote is obviously a compound structure in which the constituents contributed by each of the parental gametes will remain during the zygotos existence linked together in partnership

The Ventternth Century of Reptember 1914 p 616 164d p. 0°0.

<sup>2 &</sup>quot; Lit a virgin reneration. The production of young by a female without

intercours with a male; one of the phenomena of alternate generati a."

But in due course the zygote will itself begin to form gametes out of its own germ-plasm, and then 'the partnership is broken up and the process is reversed. The component parts of the dual structure are resolved with the formation of a set of single structures the gametes 1 . . The theory by which these facts are explained is that, though opposite characters are combined in a zygote, the gametes formed by that zygote can carry one of them only The opposed characters are called 'allelomorphs —that is to say, they are alternative to each other in the constitution of the gamete, and where one is present in a gamete the other is not. They are believed to be due to a definite something (or perhaps rather the presence or absence of a definite something) in the gamete which is called a 'factor' The characters due to these factors are called 'unit characters' Accordingly, when the zygoto begins to form its own germ cells, these divide into two equal communities, one of which carries throughout the factor (say) of tallness, the other the factor, say, of dwarfness And now, turning once more to the question of sex determination, the opinion is fast gaining ground that sex is not determined by environment, or parental conditions, or any external influence of a similar kind, but is an allelomorphic character following the above law Dr Salecby, in his 'Woman and Womanhood,' tells us that, among the higher animals at any rate, sex seems to be a quality originating in the mother The gamete of the father (spermatozoon or sperm-cell) is always male, and wholly male; but the gamete of the mother may carry either maleness or The mother, in fact, in forming her ova, forms them of two kinds-one bearing maleness, the other femaleness. When an ovum bearing maleness is fertilised by a spermatozoon -which always carries maleness, and maleness only-the result is a male individual If however, an ovum carrying femaleness be similarly fertilised, the result is a female individual, for though this zygote will be a combination of maleness and femaleness.

<sup>1</sup> Ibid pp 620 21.

emaleness is dominant to maleness. But mark the difference between the male and the female. The female is not female all through as the male is male all through. So far as sex is concerned, he is made of maleness plus maleness. In Men delian language the male is homozygous so called pure as regards this character. But the female is heterozygous impure in the sense that her femaleness depends upon the dominance of the factor for femaleness over the factor for maleness which is also present in her.

Proceeding in his scientific treatment of the question Mr Pearson, on the authority of Mr Havelock Ellis and Miss Jane Harrison who have collected much valuable information as to the distinctive secondary qualities of men and women describes woman as more resonant than man more subject to induction from the social current and man as better insulated more independent, more individualized Deep down, as Mr Havelock Ellis points out there is in men and males generally an organic variational tendency to diverge and to progress in women as in females generally an organic tendency not withstanding all their facility for minor oscillations, to stability and conservation involving a diminished individual limit and variability

I have quoted Mr Pearson at great length to show what the different lines of thought are with respect to the question of Sex in birth.

Now coming to the writer of the Academy he also speaking
The Influence of a plan untechnical language points to the
War upon Population.

as the cause determining the sex is the
offspring " He thea speaks thus of the influence of war upon
population is general and male population in particular —

"Appropos to the actual situation also is the effect that so widespread a war as the present is likely to have on the future population of the world. It appears at first sight as if the cutting off in their prime of so many of the flower of the male population would increase the present numerical supremacy of the female over the male As a fact, however, all researches show that the effect will be the exact contrary Every great war has hitherto been followed by a rise in the birth-rate and by an increase of the number of male infants in excess of the Why this should be is one of the standing puzzles female of science, but it is probable that the privations which all soldiers have to suffer on a campaign have much to say to it D1 Krizenecky (of Prague), in the Biologisches Centralblatt, has lately drawn attention to the increase of the activity of the sexual function in the lower animals which accompanies fasting, if the fasting be intermittent and not too prolonged particularly noticeable among fish like the salmon, which, so far as is known, do not feed at all during the season of sexual activity. It may partly, too, account for the fact that this season in the higher animals is always the spring, following thus on the heels of winter, when food is for most of them, hard to come by As for the disparity in the sexes, the problem is harder to solve, unless it is connected with the phenomenon of 'prepotency' which assigns predominant characteristics to the influence of one parent Such a predominance might well be shown in the return to civil life of a body of young men hardened by spare diet and violent physical exertion, and strengthened by abstention of all kinds Perhaps it is not only morally that war exalts a nation "1

## What the writer means is this -

- 1 War, instead of decreasing the birth-rate, as one may expect from the fact of the flower of the male-population being killed in prime of life, increases the birth-rate
- 2 War increases the birth of male infants and decreases that of female infants

<sup>1 &</sup>quot;The Academy" of 15th August 1914, pp 207.8.

Why these results follow is one of the standing puzzles of science But the writer says that the probable reason for the morease in the birth rate is, that war hardens the surviving soldiers, by hardwork, privations fasting &c.

- (a) Men engaged in war are hardened by abstention
- (b) They are hardened by physical exertion

This view on the one hand seems to explain some old beliefs and on the other hand, is itself supported by those beliefs,

The first point is that men engaged in war whether as actual combatants or non-combatants are hardened by abstention—abstention from too much of food abstention from too inxu rious a food, and abstention from the company of women The second point is that they are hardened by hard work during the war. Instead of an easy hie they have a regular hard busy life. Men are hardened by spare duet. In war men take food, not frequently but at regular intervals, occasionally at long intervals. At times, they have to observe fasts and to go without food for hours together. With reference to this point we know that nowadays there is a new school of medicine which recommends a little fasting, now and then for the good of health. This school has its home in America. We begin to see even in Bombay advortisement boards amouncing

Drugless Doctors. This school says that during the first stage of fasting one loses in weight a little but that loss is more than made up when the fasting is gradually given up. But even laying anide the question of the influence of a little fasting on one shealth the main point stands, riz. that war hardens the fighters.

Now as procreation depends upon atrong healthy procreators, if the males are strong and healthy they procreate a large number of offsprings. Again the progeny being strong and healthy it in its turn, procreates a large number of healthy offsprings. Thus population increases rapidly after a war

As to the number of male population after the war being higher than the female population, the The Increase of Male population after War writer of the Academy speaks thus for the disparity in the sex, the problem is harder to solve, unless it is connected with the phenomenon of 'prepotency,' which assigns predominant characteristics to the influence of one parent Such a predominance might well be shown in the return to civil life, of a body of young men hardened by spare diet and violent physical exertion and strengthened by abstention of all kinds" According to this view, the sex of the coming child is determined by the comparative strength of the male or female parent If the male is stronger than the female at the time of cohabitation and conception, the child will be a male If the female is stronger than the male, tho child will be a female

I think, that this view of the birth-rate is supported by the Old Iranian view old Iranian belief. We have a chapter in of Sex in Birth. The Pahlavi Bundehesh, a book which corresponds to some extent to the Genesis, entitled "Chegunih-i Zarhunashanih" is e "The Nature of Generation." This Chapter appears to me to support the present view of the question submitted by the learned writer of the Academy. I give below the text, transliteration and translation of the chapter

#### Translation

#### ON THE NATURE OF GENERATION

- I It is said in religion that when a woman is free from her menses if (the male) goes before her during (the first) ten days or nights she becomes pregnant 2. When she bathes after (e.e. is free from) menstruation and when the time of conception arises if the seed of the male is stronger a boy is always born and if that of the female is stronger a girl is born and if the seeds of both are equal, twins or triplets are born 3. If the seed of the male advances first towards the female it increases and fructifies if the seed of the woman advances first it turns into blood and pain results therefrom to the woman. 4. The seed of the woman is cold and damp. It flows from the side waist and is white red and yellow in colour and the seed of the male is hot and dry. It flows from the brain of the head and is white and pale.
- 6. The seed of the females always goes forward. It takes its place in the womb and the seed of the males reste ever it and fills up the womb. What remains aloof (a c what does not go to form the child) becomes blood again enters into the veins of the woman and at the time when she gives birth.

becomes milk and nourishes it (i c the child), because all the milk results from the seed of the male and the blood from that of females i

- 6 These four things are called male and female. The sky, the metals, wind and fire are male they are nover others (i.e. female). Water, land, trees and fish are female, they are never others (i.e. male). Other creations are males or females.
- 7 In the matter of fish it is said, that at the time of their desire for young ones, they go forward and backward in pairs of two in running water for the distance of a Hâsra which is the length of the fourth part of a furlong. They rub their bodies in these inovements, forward and backward. Therefrom comes out a kind of perspiration and both become pregnant.

The "Grand Bundehesh," which in my opinion, is a later development of the original Bundehesh, goes further into the question of conception among other animals also. Now, what we learn from the Bundehesh is this —

- 1 There are greater chances of conception if there is cohabitation within 10 days after the period of menses
- 2 There are greater chances of the children born being males, if the males are stronger than the females at the time of cohabitation and conception and vice versa

<sup>1</sup> Tho meaning of the sontence is this milk is formed from the seed of the male, and blood from that of the female. Justi renders the sontence thus "All milk arises from the seed of men and from the blood of the women (alle Milch vom Saamen der Meinner und vom Blute der Weiber ensteht) (Der Bundehesh p 22) Anquotil Du Perron renders the sentence thus "All the milk comes from the germs of the males changed into blood in the females (Tout le lait vient du germe des mâles, changé en) sang dans les femelles meres (Zend Avesta, Tome II, p 382)

Of these two statements the second seems to support the above view of what is called the — phenomenon of prepotency. The first statement corresponds to the following statement of Pliny — Conception is generally said to take place the most readily either at the beginning or the end of menstrual discharge "1 — In connection with this view Mr Bostock a translator of Pliny gives an illustration and says — 'It is generally admitted, that the female is more disposed to conceive just after the occasion of cooh periodical discharge. We are informed by the French historians that their king, Henry II. and his wife Catharine having been childless cloven years made a successful experiment of this description by the advice of the physician Fernel see Lemaire, Vol III, p. 83 — 2

The above view of the effect of War upon birth-rate suggests to us an explanation of the variation of Birth-rates vary ing in different months of the year hirth rate in the different parts of the year The subject was suggested to me by more than one conversation with Dr Sir Templii Bhicari Narman the founder and the chief Physician of the Parsee Lying in Respital, who said, that in certain menths of the year there was a greater demand for bods in his Hospital than in others. I give below the statistics of births in Bombay in the different months of the year for the five years 1909 to 1913, kindly supplied to me by our Realth Officer Dr Turner I also give different figures giving the average of each of the months, derived from the above statistics. We find that the monthly average as derived from these figures, varies. The monthly average of births during the months, August to January is higher than that of the other six months. This shows, that during certain months of the year the number of births is higher than during the other months. This difference is ex-

<sup>1</sup> Pliny Bk. VII Chap XIV Bostock and Riley's translation (1855) Vol. ff., p. 153.

<sup>2</sup> Ibid p. 83 n. 93

plained by the above-mentioned fact, that in strong healthy periods of life there are greater chances of conception. The months that are healthy, when people feel stronger and when they have greater "sexual activity," are the months when there are larger numbers of conception, and consequently, there are larger numbers of births in the corresponding periods, nine months after the months of conception

## SEX AFTER DEATH

Coming to the question of Sex after Death, as said above, it has been suggested to me by a paper on the subject by Mr Norman Pearson in the Nineteenth Century of September 1914. One cannot speak on this subject with any certainty, however small, akin to that with which he can speak on the question of Sex in Birth, because there is no field for actual observation and there can be no statistics or figures however few. The above writer postulates for the purpose of his article "a personal existence of some sort for mankind after death," and then proceeds to discuss the questions. "Can the distinctions of sex, which figures so largely in our present life, be retained in any such future existence, and if so, within what limits? Are they transient features or permanent elements of a human personality? Are they vital and spiritual, or merely physical and physiological characters of our race?"

The writer enters, as described above at some length, into the A scientific view subject of the origin of sex from a scientific of the Question point of view and concludes thus "If it be true therefore that male and female qualities are alike indispensable to the due course of evolution, it is reasonable to suppose that the sexual distinctions which give these qualities fair play by separating them from each other will be found in succeeding stages as they are found here. So far, the soul's development has proceeded in association with a material body, and it is likely enough that, for many a stage yet in its upward

<sup>1</sup> The Nineteenth Century of September 1914, p 616.

evolution some such body may be needed for the due exercise and growth of its capacities. Under such conditions the preservation of something like the existing distinctions of sex would present no particular difficulty "1 The writer then proceeds to show that in further future stages of evolution, though physical reproduction should cease, the distinctive qualities of exe cannot perish

Even here the friendships and affections of our earthly life are not centred on the bodily presence of those whom we love but on the mental and spiritual qualities with which their presence is associated. The bonds are weven not round hody and body but round soul and soul and unless—which is almost unthinkable—intercourse between discarnate spirits is precluded, soul will still cell to soul though bodily form should be swept away. Every hope which we may fashion for the life to come is bound up with this belief. We cannot but think that the affections and friendships will survive as we survive.

Then further on, the writer discusses the question of recognition of one soul by another in the future and rays. If however the soul of man were to lose its masculine and the soul of woman its femialne elements oven recognition would be barely possible and the affection friendship or love which once knit them together must vanish beyond recall. Such an onteome as thus would stultify the whole scheme of soul-overlution, if we rightly discern its trend from the history of the past.

The scientific and philosophical view which the writer has
An Iranian view
of the Question of Sex after Death in
an interesting and instructive way is con
vincing. He believes that even after death some body may
be needed for the due exercise and growth of the soul's capa
cities. I beg to submit here a few points on the subject from
an old Iranian point of view.

(a) According to this Iranian view whatever may be the

<sup>1 16</sup>id p 6\*7 \$ Hedp 628. 1 Hed p 6.2

in the early stages of progress after death, the soul is supposed to have some kind of rarefied body or what is called the spirit of the body or spiritual body (minoi tan). The Pahlavi Dadistân-i-Dinì refers to this subject and says that it is in such bodies that the soul entertains happiness or hope

- (b) Again the Avesta and Pahlavi books, while speaking of the Destiny of Soul, represent the souls of men as seeing before them on the third night after death a picture of their past deeds in the form of a woman. If the soul is that of a virtuous man he sees all his good actions in the form of a handsome maiden and if the soul is that of a wicked man, he sees his evil actions in the form of an ugly woman. Whatever signification may be attached to this representation, it shows that the idea of Sex after Death was entertained by the ancient Iranians
- (c) The Ardai Virâf-nameh speaks of Virâf the Irânian Dante, seeing in heaven and hell, the souls of the deceased in their distinctive sex forms. Not only that, but their rewards or punishments for good or bad deeds are pictured in a way which indicates the continuance of sex after death.

## A NOTE ON THE ANTIQUITY OF MAN AN IRANIAN VIEW OF THE CREATION OF MAN

(I resident-In Col. K R Kirtikar, I.M.S (Retired))
(Read on 28th Mar & 1916)

T

In my presidential address delivered on 25th February 1916
Introduction
I said that among the several principal
questions of inquiry by students of anthropology the following were included—'Whonce came Man'
Did he grow or was he made! How long has man existed?
The question of the Antiquity of Man, which forms the subject
of my Note this evening is another form of these questions.

The subject of this Note has been suggested to me by an emmently interesting and instructive book recently published and entitled the Antiquity of Man from the pen of Dr Arthur Keith the emhinent anatomist and the President of the Antiropological institute of Great Britain and Ireland I request members to take this short Note of mine as merely a Notice of Dr Keith's learned work intended to draw their attention to it and for nothing more

The question of the Antiquity of Man was upto the middle of the last conture con identification of the point of view of classical and religious writers. The Hindus looked to that question through their Vellas and Lurainas, the Hebrew and Christians through their Old and New Festaments the Larsees through their Net and Lahlant books especially through the Pahlant Books especially through the Pahlant Books especially through the Pahlant Book especially through the Pahlant Book especially through the Pahlant Books especially through the Pahlant Book is also believed to the Christian Cene is and Lentater he libilities writers placed. Man antiquity at some time at in 1900 u.c., Dr. Lightfoot, a learned divine and a Vice-Chancel.

to of one University of Combined on the 17th Century, is a discharachet many) execution from of the first creation of an a. He is represented to have said that 'Man was created on the Trindy on O tolor 23 1001 in a strong O clock in 'm morning. In Poblic i Bundchesh divides the period of the world and 12 it are so indications. Taking a hazari or really a real in the first search a period of 1000 years, the moderate is a host 12 tour years and Man's creation was all old to have a discount about a tolor years ago. Hindu the real to be more on the right path of scientific curvey. They can the indicate much further into a very hor a part.

But now other the question of the Antiquity of Man's Moviern point, a studied by Scientists from the points of the Archael See Geology, (b) Pre-Instoric Archael to Vanda) Human Anatomy

connection with then examination of the condection with then examination of the stratified crist of the earth, they divide the periods of the history of the earth into 4 periods. 1 Primary, 2 Secondary 3 Tertiary and 4 Quarternary. The third, i.z., the Tertiary period, is sub-divided into 1 Pleistocene (i.e. the most new), 2 Phocene (i.e. more new), 3 Miocene (i.e. little new), 4 Oligocene (i.e. less new) and (5) Focene (i.e. the least new). The Pleistocene end of the Fertiary period is spoken of as the Quarternary or Delivium ago

tegards uchoology Su Charles Lyoll has been held to be an omment worker in this branch, and his "Antiquity of Man" (1863) has been, as said by Di Keith, taken to be a classic. Since the publication of his above work, the geologist has been taken as "the official historian of ancient man". Archæology bases tits inquiries about the Antiquity of Man on man's culture,

<sup>1</sup> Dr Keith's Antiquity of Man, Preface

Industry art and such other subjects of general civilization Archeologists divide the quartornary period of the geologists in which Man as man is believed to have come into existence into the Pre-lustone period and Historie period. The Prehistoric period is divided into (1) Palwelithic se Old or rude Stone age (2) Neelithio re new or pollshed Stone age 1 in which European Man is believed to have continued for about 10 000 years. (3) Bronze ago which began about 2 000 a c and (4) Iron age The Historic period is divided into (5) a the age of monumental sources and (6) b the age of deenmontal sources. There are still some races which can be said to belong te the Stone age. Lord Avebury (then Sir John Lubbock) was an eminent pioneer of this class of scientists and his Pro-historic times has been held to be a leading book in this branch Retracing his stops from the comparatively recent Iron age through the bronze ago and then through the New Stane age and Old Stone age he carried the antiquity to the times of old sayane man to times far anterior to the Biblical times attributed to the first man

After the geologists and the archeologists come the human anatomists who together with the above two class of recentists carry. Man a antiquity not only to the heavy pust but to the dim past. They have their conclusions on fewsified skulfs teeth and hones of man discovered from time to time in the different parts of the earth Our author Dr. Keith is a learned emment representative of this class. With scientists of his class, skulls are harder than consonants and races high behind when languages slip away.

<sup>1</sup> The Journals of our Boelets contain sever I papers in Stone implement of the faircofthic and other 133 — I de Journal I the Antiropolo scal Soci 15 of Bombas 1 of 11 N = 5 pp. 413-46 N I III No. 4 pp. 180-0 — and Vol. VI. No. 6 pp. 41-80

I Furthe Indian Antiquities of these peer In sude the Lit Mr. Hide to struck book a recent interesting to the fall thanks by the M. Iras Giver ment under the title of The Lords till to m of Indian Profit term and Profit the court Arthytibes (1987).

From the middle of the last century, archeologists began to carry the antiquity to the dim past, basing their conclusions on the rude flint instruments like those found in old river beds in the Somme Valley, near Abbeville in Picardy Darwin, by his Evolution Theory, led scholars and scientists to reconsider many a question in the field of knowledge In his "Origin of Species' (1859), he suggested altogether a new line of thought for the consideration of the question of the Origin of Man 1863, Huxley, in his work, "Man's Place in Nature, ' showed that Man, whom we may take to be in one way the special creation of God, was, in many respects, no way different in the He also was a child of Evolution, and matter of his election was brought into existence by growth from the class of animals

IJ

Now Dr Keith carries this antiquity to a very icmote past measured, not by thousands, but by humbred dreds of thousands of years. He carries the antiquity to times as old as nine or ten lacs of years. Not only does he carry the antiquity further, but he revises old theories about the descent of man from one type and, rejecting them, suggests descent from more than one type. He suggests different species and genera

In connection with the great question of Antiquity, Di Keith's very first illustration on the frontispiece, entitled 'Gencological tice, showing the ancestral stems and probable lines of descent of the higher primates' is very interesting. We gather the following points from this tree

Di Keith attaches the following depths respectively to the strata of the above named five geological periods, 4,000 5,000, 9,000, 12,000 and 12,000 ft respectively. He attributes the following antiquity respectively to these periods 4, 5, 9, 12 and 12 lacs of years. According to his table or geneological tree, the common stock, i.e., the progenitor, common to Man and to

the class of primates came into existence in the Loceno period about 12 lacs of years ago. The Human stem separated from the common stock about 10 lacs of years ago. Some species out of this human stock have been now extinct e.g. the Neanderthal man? who was at one time thought to be the missing link and who became extinct about 50 000 years ago and the Ecanthropus man, and the Pithecanthropus They had come into existence about 5 lacs of years ago. The ancestral human stock of modern man whose four principal modern races are the African Australian Mongolian and Livropean came into existence about 4 or 5 lacs of years ago. Man as modern man has generally been put in the past-Tertiary or Quarternary period. I arrange the principal points in Dr. Keith's Cencological tree as follows —

- 1 The common stem is the stem from which descended the progenitors of Mankind and the 1 similar existed about 1 200 000 years ago.
- 2 The Human stem separated from the common stem about 1,000 000 years ago
- 5 The species of Man known as the Pithecanthropus (monkey man) seems to have separated from the common Human stem at about 900 000 years ago It became extinct about 450 000 years ago
- 4 The species known as the Neunderthal Man seems to have separated from the common stem of Medern man about 680 000 years ago and it became extinct at about 400 000 years ago

The Neellthiamen of Kent about 4 000 s. c. Their civile

According to Dr Koith, some of the people of the Neolithic age had made a good progress in the growth of civilization He says The Applithio men of Kent were ongineers of no mean ability 1 Again the minds of those

ancient inhabitants of Kent must have been deeply moved by a faith in things unseen and of a human existence untrammelled by the flesh. 2 Their family or social ideas were so far advanced that we come across tombs in which members of the same family or of nearly related families were buried together 2 From what Dr Koth finds to be common between the Egyptian "mastoba tombs and the megalithic tombs of hent it is inferred that delichocaphabe (long brained) neolithic man of hont in England who lived about 10 000 years ago believed in the Resurrection of the body Dr Keith refers to the open tion on the skulls among those angient men of about 4 (KH) B U known as trepanning or trephauning and says It is clear too that in the majority of cases these \colithic men undertook and successfully carried out operations which even modern surgeons heatate to perform 4

In to the reasons why those ancient Noolthio men of Kout of about 4 000 years ago practised upon skulls daring surgical procedures Dr Koth refers to the operation of trepanning among the modern natives of New Ireland in the Bismarck Archipelago where they perform the operation with sharp obsidian flakes and apply vogetable bandage to seeme the dressings over the wound. The operations are supposed to ! meant to relieve certain forms of herdacla At other time perhaps trepaining is performed to allow the ovil spirit of insanity or of delusion to escape

The instances of trepannings have certain bearing on the problem of man's antiquity | Il sw does it come about that in meient Porn in Scolithic France in the Sen Ireland of to d s

we find the same daring and difficult operation carried out? Have each people discovered the practice for itself, or—as seems to me more probable—was it not evolved so long ago that it has premeated the whole stock of modern man? Further, the operation of trepanning shows us that a civilization which prevailed four thousand years ago in one part of the world is still represented in the modern world. There are still many modern races still in the stage of culture which was reached by the people of Europe four or five thousand years ago. The Neolithic culture, although ancient, is still modern. It requires many thousands of years to move the whole world up a stage in civilization "1"

Upto about 30 years ago, the conviction was, that ' there Conclusions drawn by Dr Keith, The probable time when Human stem and its offshoots parted of about 500,000 years. Then it came to be noticed that a type of man, known as the Neanderthal type, has become extinct and that the modern man comes from another type whose origin was much anterior ' Going far enough back we find humanity broken up into distinct structural groups or genera, each confined to a limited part of the earth'

Taking the modern races of men—the African, Australian, Mongolian and European—we find among them two contrasted and opposite types, viz, 1 "the fair-headed, white-skinned, round headed European and 2 the wooly-haired, black-skinned, long-headed negro of West Africa. If we search the present world for the type of man who is most likely to serve as a common ancestor for both African and European we find the nearest approach to the object of our search in the aboriginal Australian. He is an ancient and generalised type of humanity, he is not the direct ancestor of either African or European, but

<sup>&</sup>lt;sup>1</sup> Ibid, pp. 21-22.

he has apparently retained the characters of their common ancestor to a greater degree than any other living race. As to the length of time in which either the African or the European type may have been produced from the Australian type the type of the common encestor of modern mankind—we must bear in mind that the human type changes very slowly after thousands of years. So we must allow the time of the whole length of the Pleutocene period—about 4 lacs of years—for the production of the African or European type from the Australian one

Coming to the extinct types—1 the Neanderthal man spoken as Home nearderthalensis and 2 the Ecanthropus named by Dr Smith Woodward as Ecanthropus Dewsoni from the fact of Mr Dawson discovering its feesil at Pilitdown in Sussex but proposed to be named as Home Dawsoni by Dr Keith—we must bear in mind the above length of time (about 4 lines of years) for the first appearance of the common ancester of the modern 4 types of man Proceeding on a similar line we find that the time must be about 10 lacs of years from now when there inved the common ancester of the four existing types of modern man—the African the Anstralian the Mengohan and the European—and of the extinct types—the \canderthal and the Ecanthropus

Dr Keith thus sums up the situation. When we look at the world of men as it oxists now we see that certain rices are becoming dominant others are disappearing. The competition is vorid wide and lies between the varieties of the same species of man. In the world of fossil man, the competition was different it was local not universal it lay between human beings belonging to different species or general not varieties of the same species. Out of that welter of for all forms only one type has survived—that which give us the modern races of man. Further, we realize that the three or four human types so far discovered represent but a few fossil twigs of the great evolutionary human tree. We may hope to find many more branches.

The modern to currence of the geologists, archeologists and

Dr. Williams 1 111 the Court 1000 reports and 61 that the Universe transfer human anatomista lead us to revise the views about the antiquity of man held before us by the Scriptures of different people. This revised view carrying the Antiquity of Man from a few thousand years

to hundreds of thousand of years, makes us think with awe and rever nee of that great Architect of the Universe, whose hand is seen in that Universe from its very beginning, Dr. Wallace that great Scientist whose name is, next to Dainin greatly associated with Evolution, thus justs the case after a creen consideration of the structure of buds, insects, &c. "Largue, that they necessarily unply first a Creative Power, which so con tituted matter as to render these marvels possible, next a directive Mind, which is demanded at every step of what we term growth, and often look upon as so simple and natural a process as to require no explanation, and lastly, an ultimate Purpose in the very existence of the whole vast life-world in all its long course of evolution throughout the con- of geological time. This Purpose, which alone throws light on many of the mystories of its mode of evolution, I hold to be the development of Man, the one crowning product of the whole cosmic process of life-development, the only being which can to some extent comprehend nature, which can perceive and trace out her modes of action, which can appreciate the hidden forces and motions everywhere at work, and can deduce from them a supreme and overruling Mind as their necessary cause" (Dr. Wallace's "World of Life" (1911), Preface, pp. vi-vii.)

## III.

I will give here the Old Iranian view of the growth or crea-Old Iranian view tion of Man, which, though not on all fours of Creation with the present scientific view, at least shows, that Man was not taken to be a spontaneous creation, but was supposed to have come down from some hears antiquity from a primitive form of being or existence from which came down the vegetable and animal creation.

According to the Pahlavi Bundehesh 1 Ahura Mazda oxisted from the first unequalled or matchless (a-hamaki) from infinite or endless (a kenarc) times His space, knowledge and time were cternal They existed exist and will exist. He was therefore Omnipresent, Omniscient and Eternal. His place was in endless or Infinite Light (a-sar roshni) Through omnis cionce he brought creation (dam) into existence. For a period of 3 000 years this creation existed in a motionless (a multur) static (a rava) and intangihle (a giraftur) state. This state of oxistence may also be spoken of as spiritual (minôihâ) or one that can only be conceived by the mind. After this period of 3 000 years He gave to His creation a tangable or visible form With the assumption of this tangible form by His creation there came in Destruction and the idea of Evil This next period whorein there will be a conflict between construction and des truction good and ovil, is a period of 9 000 years. This period of 9 000 years is divided into 3 periods each of 3 thousand venrs (hardriss e millentums) During the first of these periods there was almost all construction very little destruction all work of goodness very little of ovil During the next period of 3,000 years, there will be a mixture of construction and destruction of good and ovil Angra malnyu or Thriman who typifies or represents destruction or avil will have a aphere of action There will be a constant fight between construction and destruction good and evil Then, there will nome a time when destruction or evil will cease to exert any influence All and everything will be for the good Good will overpower and suppress all ovlf This wilf be the last of the three periods-the third period of 3 000 years

<sup>1</sup> Chap. L. Vide my Translation of the Pahlavi Bundeheah 17: 1 4.

Thus, the Pahlavi Bundeliesh speaks, in all, of 12,000 years We are at present in the third period of 3,000 years, in the midst of the conflict between good and evil. We have to fight for good against evil with the fullest conviction, that, in the end there will be all good, and evil will be suppressed. There will be a final day of Resurrection, a day of Hope and Glory There will be the final Frasho-kêreti or Frashogard, when every thing will be fresh and good. Let Hope sustain Life

Looking to the account of the Bundehesh itself, of what are Hazârâs or Mille called, the historical times, one may take, mums that the periods which are spoken of as hazârâs or milleniums, are not literally the periods of thousand years. The hazârâs may mean more than a thousand. At least, if we take the hazârâ to be strictly a period of a thousand years, the Bundehesh contradicts itself masmuch as the third period of 3,000 years has overstayed its appointed time. But we have not to justify here what the Bundehesh says, we have only to take a note of the statement, which, as it is, in the ordinary way, takes the duration of the world to be that for 12,000 years.

I will give here the old Iranian view of the growth or creation of Man during the course of these hazârâs; of the creation of "In the creation of the world, Ahura Mazda first created heaven (âsmân z e. air or the ethereal universe), secondly water (z e, liquid, maya), thirdly the earth (jamik), fourthly vegetation (urvar), fifthly animals (kirâ) and sixthly Man (anshutâ) "1 Later Parsee books connect these six successive creations with the six Gâhambârs, or periods of creation

Now, though Man, the last in the order of creation, is spoken of as created, and though God is spoken of as Creator (Dâtarê), the Pahlavi Bundehesh speaks of the Origin of

<sup>&</sup>lt;sup>1</sup> The Pahlavi Bundehosh, Chap. L Vide my Bundehesh, p. 8; S. B. E. Vol. V., p. 10.

Man as preceding, at the hand of God, from a lower form of life-from vegetation Though Man is the result of the creative work of God, he is not a creation in the sense of something out of nothing" He is created or ovolved out of a lower form of creation. We read the following in the Bundehesh On the subject of the Nature of Man, it is said In religion that Cayomard a gave forth his seed at the time of death. That seed was purified by the work (lit motion) of the light of the sun (robashulh 1 roshanih 1 khurshid) Neryosong 2 guarded its two parts. One part was accepted by Spendarmad 2 In the form of rards (a kind of tree) which grows like a column during 15 years with 15 leaves, there grow np Mashi and Mashyani 4 from earth after 40 years, in such a way that their hands were backward on their shoulders they were united with each other and were of the same height and of similar appearance. The waists of both were united and they were of a similar stature in such a way that it was difficult to recognize which was male and which was female soul (robûn) was first created and then the body (tan) Both came into the form of man from the form of a tree (urvar L. arbour) The breath (nismo) which spiritually entered into thom (mankind) is soul. Now in that way there grew up a tree the fruit or result of which is 10 species or varieties of man o

I The very first primitive being, who in the phrascology of the modern soiculists, may be called "the progeditor or ancestor fill common stock of Life" from another part of the liund-heal he appears also to be the first progenitor of Man, before the sexes we developed. The word in the Avesta is Gays marcian, lit. "mortal life. So, Gayomard is the very first progenitor of life the very first being whether vegetable being animal being or human being. The name is then restricted to the first human being. Still later on a in Findonial being takens so then first transaction."

A memoriner of God. 4 The Yazata or angel presiding over arth-

<sup>4</sup> The Iranian 1dam and Lve.

<sup>4</sup> Hundebreh Chap. XV 1-5. Fide my Bund besh pp. 67-81. H. D. Vol. V., pp. 54-53.

Proceeding further in the same chapter of the Bundehesh, we find that the very first human beings hved on water (av khurishna) and then began to hive on the milk of white-haired goat (buz-i safid mui) and then on the flesh of sheep (gospand). They then produced fire from (the friction of) two kinds of wood, and cooked food. They at first covered their bodies with grass or leaves (gihâ) and then with skins (pushtin). They dig into the carth to live in (Pavan zamik gâri barâ khafrûnt). They then acquired iron and shaping it by means of stone prepared instruments, using a furnace (tâvali) for the purpose. They then began entting wood with such instruments and prepared wooden huts (padashkhur).

Gayomaid, the very first primitive being or form of existance was seviess. The first progeny (Mashi Mashyam) had sexes combined in one body. It was after some long time. that a desire for sexual intercourse grose in them? Nine months after cohabitation and conception, a pair-male and femalewas born The parents of the first human stock, devoured their children, the male devouring one of the twins and the fomale the other 8 Then, at first, there came into existence seven pairs. Their average age was 100 years From these pairs and their progeny, there descended 15 races (sardeh) which spread into different parts of the earth. In all, from Gavomaid, the first primitive being or form of existence, there descended 25 species, among which there were many which were of a kind of human monsters For example, there were some beings that had ears on their breast (vargush, bargush), some that had eyes on their breasts (varchashm), some that were one-legged (ayok regalman), some were bat-winged (parr chegun shabâ), some were with tails (dumbimand), and some were with hair on the body (mui pavan tan)

The Evolution or the gradual Creation according to the Bundeheeh.

referred to by the Bundeliesh at some length with a view that to some scientists the old Iranian view of the evolution of creation may be of some interest. At the BURDARS to be mythological on the surface.

bottom of all that appears to be mythological on the surface the old Iranian belief seems to be this Gayomard (lit mortal life) was the first primitive being or what may be called

life principle The primitive or the first man or humanity grew or came into existence at the hand of the Creator from a lower form of creation—the vegetable creation From this Ca you and the primitive being or form of existence there descended various species of what Dr West calls "human monsters and the progenitors of modern man. The description shows that all life-creation whether vegetable animal or human had in remote antiquity one life principle or life-stock

Dr Kelth's theory of the descent of Man from more than one type, reminds us of what is said in the Fahlari Bundehesh about mankind descending from two progenitors both represented to be vegetable in substance. Fifteen races of men are there spoken of as coming down from one progenitor a plant named rives. The first separate pair coming down from this is represented to be arimal in its nature insample as it devoured its chikken. From another plant came down other 10 races of mankind which are at first menstrous races.

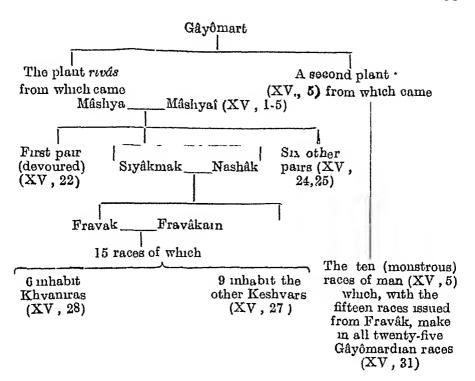

I would draw the attention of my readers to the geneological

A Geneological Tree according to the Bundebesh by Pev Dr Casartelli in his learned work. In Philosophic religion e du Mazdéisme sous les Sassandes 1 I give that tree a translated

by the late Dastur Phoroze Jamaspit Jamaspas 12

<sup>1 145</sup> 

The Philosophy of the Manlayamian Religion under the Sa sanula, translated in mine french of L. ( asart il by D sturblur & Jama ) Jamaapaa, (1879) p. 133.

Dr Keith refers in his preface to the present war, wherein, here and there, man fights with man as a beast with beast The history of Man's antiquity, as presented and summed up by Dr Keith in his geneological tree, and as reflected in the above geneological tree of the Pahlavi Bundehesh, brings forth before us the fact, that even after thousands of years, the bestial fighting propensities of Man have not died out As said by Dr Drummond,1 Man is as it were built, in three stories, in the lowest of which, the ground floor, there still dwells, even after a period of thousands of years, the animal Man had a "belligerent past," the nature of which now and then appears on the surface Many groups of man, such as the Neanderthal Pithecanthropus have died The group of modern Man that has survived is the one that has "the better brain." that "better brain," at times, shows its animal propensities.

THE GERMAN KAISER WILLIAM IN THE INCANTATIONS OF THE ORAONS OF CHOTA NAGPUR AND THE IRANIAN KING FARIDUN IN THE INCANTATIONS OF THE ANCIENT PERSIANS

[President-Lit COLOREL & R KIRTIKAR LMS (Retired)]

(Read on 26th April 1916)

1

The present unrest among the Oraons of Chôta Nagpur has suggested to me the subject of this paper. This unrest has been the subject of a special communique by the Bihar and Orless Government. The unrest has led to some seditions movements which formed the subject of a court trial and ended in the punishment of some offenders. It has also led the European Association of Calcutta to send a representation to Government wherein they hold the German missionaries in the district responsible for the unrest.

The recently published book of Mr Sarat Chandra Rov en the Oracons of Chôta Aaguar referred to by mo in my paper on The Women's Hunt before this Scenety 2 gives an interesting account of the Oracons. According to that book the Oracons form one of the purely aberiginal tribes of the sceladed Plateau of Chôta Nagpur which is one of the puricipal centres in India of aberiginal and semi-aberiginal tribes. According to the census of 1011 their number including the

Christian converts (about 1 12 735) was 8 64 152 Among these

1 Dated, Ranchi, March 23ni 1916 and published in the T reas of Index
of "4th March 1916, p. 7

<sup>1</sup> A Note on The Women's Hunt (Jani Sikar) among the Oriens of Chita Nappur "rewless 2 ith J nuary 1916. Journ 1 tol X No. 7 n. 513 et seq.

n, 513 cf seq. 3 "The Orlons of Ch th Ni-pur. Their History Loon mee his and Boolel Organization" by Sarat Chendra Roy. M.A. (1913) p. 4.

about 1,57,414 were Hindus and 5,94,569 were pure Animists They are very prolific. They call themselves Kurukhs, from one of their mythical hero-kings, Karakh, from whom their country was called Karukh-Des "Fow traces however remain of this personage, and sometime afterwards a new name, Kikat (a name which is however found in the Rigveda) was applied to the country. It is by many alleged that the whole of Kikata in more modern times took the name of Magadha, from the Mags, who settled in its eastern parts "1" They are considered to be a Dravidian people who emigrated to Chôtâ Nâgpur in Bihar on the banks of the Sen from Carnatic viâ the Narbada river

Mi Sarat Chandia Roy says that their traditionary legend seems to show that their early ancestors formed "the Vânara army that helped the Aiyan hero of Râmchandra in defeating the non-Aryan king Râwana of Lankâ, whose dominions probably included part of Southern India. In the long story of the genesis of man and the spirits recited by the Orâons at their periodical Dândâ-kattâ, or ceremony² of 'cutting the (evil) teeth', Râma is spoken as their 'grandfather' "3" The Vânara in the army of Râma seem to be so called, because 'Vânara' i e, monkey was their tribal totem. They "abstain from killing or injuring or even domesticating a monkey".4 The flesh of the monkey is tabu to them

The communique of the Bihar and Orissa, Government thus describes the unrest "The movement described in the Government communique to have had a two-fold basis, the object being partly to expel from the Orâon country evil spirits

<sup>&</sup>lt;sup>1</sup> "The Oraons" by Sarat Chandra Roy, M A pp 3-4

<sup>&</sup>lt;sup>2</sup> This ceremony is performed at every Orâon house on every possible occasion. The main object of the ceremony is to save men (specially children), cattle and crops from the 'evil-eye' and the 'evil mouth.'

<sup>3 &</sup>quot;The Oraons" by Sarat Chandra Roy, M A. p. 19 4 Ibid. p 22.

who were believed to be responsible for had crops and high prices and partly to raise the social position of the Orions to the higher level occupied by Christian and Hindu converts of the race The former object was to be attained by the recita tion of certain powerful spells (mantras) and the latter by the abandonment of degrading practices such as the keeping and oating of mgs and fowls and the use of intexicants. The excitement produced among the Oracas hy the adoption of these measures was doubtless aggravated by the general atmosphere of unrest caused by the war and by the removal from their midst of the members of the German Evangelical Lutheran Mission who had formerly worked amongst them, The younger man began to hold secret meetings in villages at night and the invocation of the German Kaiser crept in the maniras though there is nothing to suggest that any German missionarios were responsible for this. Some acts of violence towards the end of 1915 caused a certain amount of panio amongst the local zemindars and non-aboriginals, but the drafting of a few extra police into the chief centres of unrest had a reassuring effect and with the harvesting of the winter grops which were unusually good the movement began to ambeide. It is not however wholly dead yet as the expulsion of ovil spirits from one village results in their transfer to others and the process is likely to continue till the whole Orsen country has been purged. The movement has been followed in places by a semewhat extensive campaign of witch-hunt ing in which the whole populace and not merely solus or a pecial witch-hunters take part Several brutal murders of the anprosed witches have taken place but with the conviction of some offenders this form of unrest has also decreased and will doubtless disappear in time

The Bibar and Orisea Government communique dated 1 and 1, March 23 1916, published in the Times of Ind a of "4th Larch 1916, p. 7

The cool and calm way, free from any alarm or excitement,

The Advantage of the knowledge of people's Beliefs and Customs displayed in the communique in which the Bihai and Orissa Government have looked to the movement, and looking thus have worded their communique, shows the advantage to Government of its officers patiently studying the various be-

liefs, customs and superstitions of the people—an advantage often referred to by expert anthropologists and discoursed upon by many a President from the platforms of Anthropological Societies. Hasty and unsympathetic officers, ignorant of the customs and beliefs of the people, would, in such cases, create unnecessary alarm and connect the movement wholly with some movements of political unrest, and thus create the very mischief sought to be undone

Magic, divination, incantation, necromancy witchcrafts, sorcery, exorcism, &c, all these are terms which can be considered by anthropology under a general head. Some of these may be said to have both legitimate and illicit branches. Of all these, incantations are, to a certain extent, associated with prayers. Those parts of the prayers, which speak of the removal or oure of diseases, physical or mental, and of calamities, can be termed incantations. We have such incantations directly or indirectly associated with all religious writings. They are intended to invoke good spirits and to counteract the work or influence of evil spirits. The mantias or incantations of the Orâons seem to be of such a stamp

The Expulsion of Evil Spirits from village to village Such movements of Evil Spirits from expulsion die their natural death when the process of expulsion is completed and the Evil Spirits are driven away from the last village to dreary mountains and deserts or to the sea. In this connection, I would draw the attention of my readers to my papers 1

<sup>&</sup>lt;sup>1</sup> Journals of the Anthropological Society of Bombay (a) Vol. IV No. 8 pp. 419-426 (b) Vol. X, No. 3 pp. 209 228 and (c) Vol. X, No. 7 pp. 543-47.

entitled Mate no rath (the Chariot of the Goddess) The Devil-driving procession of the Tibetans and A Note on the "Wemen's Hunt (Jani Sikar) among the Orâons of Chôtă Năgpur

We gather from the Government communique that the object of the inspiring idea of the movement was two-fold (1) The Campaign against Evil Spirits who are supposed to bring bad crops and to enhance food prices 1 (2) The raising of their social position to that of the native Christians As is often the ease with many people they resorted to manirus or incantations to avert the above ovils But the special feature of these incantations is that they invoked the name of the German Kalser in them

The unrest is confined to non-Christian Ordons who number about 89 000 As a result of this movement Boolal ameliora one of the objects of which was some social tion, a result of the unrest. amelioration, they have given up eating fish and ficsh and driaking liquor. This result draws our special attention to the fact that at times even social referm or amelioration is a comparative word. The Orions who were upto now oating flesh and fish and were drinking liquor are now abandoning these with a view to smellorate their condition They look to the change as a kind of social reform while is our midst there is a movement among educated Hindus, who have hitherto abstained from fish flesh and wine to resort to the use of these

The connection of Mission series are possible for this are responsible for this But the Furpean Association of Calculta In its letter to the Government of India

For an instance of the bellef in evil spirits exercing an left store that stores which harm the crops, refe my paper before the Keestych Abersleining procession of the Tubetan Bestoli is, as series! Daylowing and a few thought suggested by It. (Journal of the Anthropology of Bombay Vol. No. 3 pp. - 13)

does not agree with the Bihar and Orissa Government, and says. "It is difficult to imagine this unrest occurring if German missionaries had not been in any way connected with the district." We all admire the good social work which most of the Christian Missions do in India. But the trend of the work of some Missions of Missionaries, especially in matters of religious beliefs, is not always for the good If what the European Association advances is true, here is an example of that kind At times, their less careful teachings create a state of belief, which, between two stools, bring the people, among whom they move to the ground Goethe, the poet-philosopher of the "Vaterland" of these German missionaries, at one time, said "I happened to advocate the people whom they (the missionames) sought to convert, and to declare that I preferred the primitive state of those ignorant nations to that to which they had been brought "1

There seems to be a general tendency among people, modern or ancient, who resort to meantations for a Why was the Kaiser invoked ! good purpose, to invoke the name of a Deity, or of a powerful person, at times an imaginary person, who is well-nigh derfied. In the case of the incantations of the Orâons, the German Karsor has been such a personage The question is "Why the German Kaisei specially"? It seems, that owing to the present war, the name of the Kaiser as a powerful personality, opposing the joint strength of more than one nation, has been on the lips of many This supposition may be due to the reports and rumours that may have come to their ears, or the German missionaries, who moved among them, may have possibly brought to their notice the great personality of their king, and that, perhaps, even without any intention of raising any political unrest

The mass of the people in many an Indian village or district, at times get satiated, if not tired, with their usual god or gods,

<sup>&</sup>lt;sup>1</sup> "Memoirs of Goethe, written by himself," (1824) Vol II, pp 117-18

especially their village god or gods. When the feat or power real or imaginary of a god or gods, foreign to their village or villages, is mentioned or brought to their notice, they immediately take to that especially during times of difficulties. They think, that in spite of their daily and frequent prayers their own gods have not stood by them in times of their difficulties or have lest their divine power or efficacy. So they are inclined to try new ones.

As in the case of a god or gods so in the case of the person or persons living or dead, whom they may have sanctified Something like that seems to have happened with the Ordone Their difficulties of bad harvests, and their fall or decline in social status in comparison with others may have been attri buted to the loss of officacy or power of their god or gods or of their deified person or persons. So they were on a look out for a fresh powerful personality the invocation of whose name may avort their dangers. That personalty was found by them or perhaps willingly or unwillingly supplied to them by the German missionaries in the person of the kniser as that of a great king in a distant country who by his power defied many enemies. The proverb says, that distance adds to So the distance of the country where the onohantment. powerful personality ruled added to their admiration of hhn

One cannot probe sufficiently well all the reasons, why the Orsons of Chota Aspur have sanotified which things or the ruler of a country thousands of miles persons are senettified or defied away from their country, whom they have not er seen and who called their mind

more in imagination than in reality. But we have some instances somewhat amusing somewhat arrange of persons real or apocrypinal and oven of things paying into the class of sainthood. The following are some such instances of persons and things keing sanetified and admitted into Martyrok gy in various strange and unexpected wave.

Just as we see, in the present case, a Christian king of a distant country, pass, for one reason or (a) Buddha in another into the sainthood of a tribe of this the Roman Catholic Marty rology country, viz, the Orâons, we have a corresponding ease, in which an Indian prince has passed into the martyrology of the Roman Catholie Christians It is that of Gaotama Buddha. The Christian story of Barlaam and Josephat, is believed by many Christian scholars to be the Christianised version of the legendary history of Buddha Sakya Muni, one of whose titles is Bodhisatva Prof MacDonnel says "That the founder of an atheistic oriental religion should have developed into a Christian saint is one of the most astounding facts in religious history 1' We have an interesting account of this transference in Jacob's Barlaam and Josaphat 2

The author of this book, in his learned Introduction, presents interesting evidence to show, that, in about the 5th or 6th century, Buddhistic legends and doctrines went to Syria and got mixed up with the Christian dogmas and legends prevalent there. The Indian Zarmanoehegas by name, a native of

<sup>&</sup>lt;sup>1</sup> Prof MacDonnel's History of Sanskrit Literature, p 420

<sup>&</sup>lt;sup>2</sup> Barlaam and Josaphat English Lives of Buddha edited and introduced by Joseph Jacobs (1896)

<sup>3</sup> The pith of what this author says is this Both Buddha and Christ represent the ideals of a whole continent Buddha represents Asia's ideal "To Be," while Christ represents that of Europe "To Do" Buddha is a contemplative Sage, Christ a beneficient Saint But, though their aims are different, their methods are similar. They both fight against the World. The similarity of the schemes of both consists of the following. The legends of both present the parallels of (a) the Annunciation, (b) the Massacre of the Innocents, (c) the Temptation in the Wilderness, (d) the Marriage at Cana, (d) the Walking on the Water, (e) the Transfiguration (f) Again both taught by parables, some of which are well night the same, eg, those of the Sower, the Prodigal Son, Seed and Soil. (g) Both lay stress upon the Spirit against the Letter and upon the opposition between Riches and Spirituality and upon inward Purity (h) Both recommend a Brotherhood or Church (i) Even the formalities of some of their rituals is the same

<sup>4</sup> Supposed to be another form of Zarmanus, or Garmanus, another form of Sarmanas, a sect of Indian philosophers

Bargosa <sup>1</sup> referred to by Strabo as having gone to the court of Augustus Cæsar from Barygaza from the Indian king Porus <sup>2</sup> the sovereign of 600 kmgs, <sup>3</sup> and who is said to have immor talized himself by burning himself to death at Athens seems to bave been a Buddhist. His fame, as an Indian, who though in a prosperous state of life burnt himself to escape a possible or probable calamity in future may also have drawn the attention of the people at Judea.

Now Mr Joseph Jacobs traces the origin of the Christian story of Barlaam and Josephat through different successive sources He gives a table giving the pedigree of the works giving the story from earlier times to the present times, and shows that it may have come down from an Indian original through its Pahlavi version now lost From Pahlavi it must have gone to Arabio in the same way as the story of Kabia and Dumns has passed into that language. From Amble, it went through various ways to the various sects of the Christians. It is supposed that the name Joseph or Joseph is n variant of Bodhisattva a word used for "the man who is destined to become a Buddba. . It began to take that shape through Persia Bodhisattva became Budhaspa Mr Jacob thinks that the Aspa form at the end is a favourite form with the Persians at the end of many names. For example take the names of the members of Zoronster a family Pournshaspa. Paitaraspa Hachaedaspa So Bodhisattva became at first Buddhaspa It may be so but I think it is more probable that the change is due to the fact that the same letter in Pahlavi can be read as v and p I am inclined to trace the equations as follows - The Index Bodhisattva or Budhisattva when written in Pahlavi could also be read Budhi atpa which

<sup>1</sup> Another form of Harvy us which is Baroatsch, Barutsch or Broach.

<sup>2</sup> A rene-al nam of todian kings,

<sup>2</sup> Strabo Bk NV Ch p 1 "3. Hamilton and P leoners Transl thea Vol. III p. 119.

Barlaam and Josephat by Joseph Jacobs Introduction | XXXV.

by dropping the 't', became Budhisapa, and then, possibly through the fondness of the Persians for the word 'aspa' became Budhaspa. Then, to proceed further in the change, on coming to the Arabic, the letter 'b', owing to a change in the nultehs, became 'y' and the word became Yudhasp. Y often becomes j and p becomes f. So Yudhasp became Joseph. In Josaphat, perhaps the 't' that had disappeared, re-appeared changing places. I would place the equation in Pahlavi and Arabic characters as follows.—

Whatever be the way, in which the story of Buddha went to the West, the fact is, that Buddha as a great and prous ethical teacher was somehow sanctified in the Christian Church In the Greek Church, also known as the Orthodox Eastern Church, his feast day is 26th August In the Martyrologium of the Roman Church, it is 27th November. It is said that even a Church (Divo Josaphat) is dedicated to him at Palermo.

I have said above, that at times, for one reason or another,

(b) St Veronica The case of a handkerchief, raised to the rank of a Saint people sanctify personages who do not really exist. We are told of such instances in the case of St. Veronica and St. Amphibalus. "It is said, that a Jewish lady (Berenice by

name), moved with pity, gave to Christ her handkerchief when he was on his way to Calvary, so that he may wipe off the drops of perspiration produced by agony upon his face. By some miraculous power, 'the true image' of Christ was left upon that handkerchief when he wiped his face with it. He then returned the handkerchief to the lady. Now the Greco-Latin words for 'the true image' are vera icon. So, the handkerchief was known as vera icon, i.e., 'the true image'. This was then the name of a vestment or of a part of a dress, and it was subsequently transmuted into that of a saint, as St. Veronica. Current Roman Catholic tradition says that the

Jewish lady who was subsequently known as Veronica, latterly cured Tiberius of a sickness by means of this miraculous handkerchief. This cure convinced Tiberius of the Divinity of Christ and he sent the doubting Filate into exile. This handkerchief is said to have been preserved upte now in Saint Peters at Rome. But, as it happens in the case of many relies connected with the name of Christ, there are other churches which claim to have the honour of having the handkerchief. One church at Milan and another at Spain claim to have it. The festivel of this saint, St. Veronica is observed on Shrove Tuesday. It is not one of the obligatory festivals."

Another instance is that of St. Amphibalus Macka; the (c) St. Amphiba author of the History of Freemasonry think loss. The case of an occlesionistical clock, resised to the personage. Ho says it was the ecclosism of the Romish Church over their other vestments. It was a vestment cooksistically transmitted into a saint sattle hand.

vostment occlesiastically transmitted into a saint, as the hand kerchief on which Christ felt the image of Histace became converted into bt Veronica."?

converted into of / dionicar.

Another populiar instance of mutilations and changes of names and thus of non-existing persons coming into existence as great personages and oven as Sants is that of 5t Oracte. They say that there was a mountain of the name of Sersete. A copyist who wrote his name by some mistake put a full stop after the first letter. S' of this name. He wrote the name as S. Oracte. The name was then mistakenly read as S. Oracte and the a parated letter S was taken to be an abbreviation of Saint. The name was then taken to be that of a saint St. Oracte. Thus the name of a mountain was taken to be that of a saint and this

<sup>1</sup> Mackay a History of Freemasonry | I'de my Paper on "The Union dary and the Actual History of Freemasonry" in my Massimic Lapers in 104-3.

<sup>\*</sup> Mackey s, History of I recessionry p 01

saint was admitted in the Roman Catholic Martyrology. This saint is also spoken of as St. Oreste

Now the question is. Is Kaiser William II invoked by the

The German Kaiser, invoked as a Good Spirit or Lvil Spirit? Orâons in their mantias or incantations as a Good Spirit or as an Evil Spirit The writer of an article in the Times of India, says: "The Orâons are extremely superstitious,

and it is extremely probable that they attribute failure of crops to an evil spirit in the shape of the German Kaiser. When it was alleged in defence of Wairen Hastings that a temple had been built in his honour in India, Burke retorted that Indians built shimes not only to benevolent but also to malevolent deities such as the goddess of Cholera and Small-pox. The Orâon's deities are mostly of the latter kind, and his life is one long round of propitatory acts and offerings. It would be nothing surprising, if some hints of the Kaiser's exploits in Belgium had penetrated even to the haunts of the Orâon, suggesting to his untutered intelligence the existence of a more sinister deity than any in his pantheon, needing propination."

I think, that the Orâons invoke Kaiser Wilhelm in their meantations as a Good Spirit and not as an Evil one. As a matter of fact, we have no evidence to say, that some body or bodies worked upon the untutored minds of the Orâons and showed to them, pointing to Belgium or to any other country, any devastating spirit or destructive inchnation of the Kaiser—On the other hand, there were the German missionaries in their midst, who, knowingly or unknowingly may have represented their Kaiser as a great, powerful, bold man, who stood against the power, not only of Britain, but also of other allies—In the case of the mâtâs, the goddesses of Small-pox, Cholera, &c, the people not only heard stories of the accumulated experience of ages, but themselves experienced their devastations. In the case of the Kaiser there is nothing of the kind—There is neither any tradition of accumulated experience, nor any actual or personal experience of

Animism, the Seed of Religion, by Edward Clodd, p 92.

sufferings But man, especially simple primitive man is more inclined to be taken captive with the rumoured grand enterpris ing deeds of some personality. It is possible that the German musionaries may have had a witting or unwitting hand, however small, in raising the Kaiser to the higher platform of great and even divine men Unfortunately we have not before us the wording of the incantation to indge more definitely on the subfect. The name of Alexander the Great suggests itself to us in the consideration of this question. Even after more than 20 centuries of his invasion of India, not of whole India but of only a part of India he is as it were held as a great god or Dov who did supernatural facts. According to Anguetil Du Perron who travelled in the Salsette about 150 years ago some Hindu Brahmins believed, that the wonderful caves of Jogoshu, Monposer and Kenery in the Salsette which they thought could not be built by the hand of ordinary man were built by the suporhuman hands or power of Alexander Even the Elephanta caves on the other side of our harbour are attributed to Mex ander 3

All the above considerations show that the kniser is looked The Kaler in at as a Good Spirit Again we learn from voked as Baba the reports of the trial of seven Orsons that the Ordons spoke of the German Kaiser as Baba. 4 The use of this word also shows the same thing We real that turning towards the west they offered water to the German Baba as their object of worship They same somes in chorus invoking the German Baba and Paschim or the

<sup>&</sup>lt;sup>1</sup> Even, in their cuses, one cannot with any certainty say that they are looked at as malevolent spirits. They are invoked for help again t disasses. Even monothelyte at times, speak of appearing the wrath of God.

God.

2 Gasparo Balbi, who wrote in 1850 quoted by Dr Gerson da Cunha

in his Origin of Hombey" p. 2

3 Telegram dated Calcutta 22nd April in the T mc of lates of the
April 1916 p. 10.

blabs is a familiar word with the Ori n for father W fael it in one of their songs (The Orient of Chota Nigpur by Sarat Chaptra Roy M. L., 43.).

West Baba to drive away demons" The word 'Baba' is used in India with the names of saintly personages. For example, the Sikhs speak of Guru Nânak, the founder of their sect, as Bâbâ Nânak. Mahomedans sometimes speak of their pirs or saints as Bâbâ, for example Bâbâ Rishi, whose Zîârat we see on our way to Baramula from Gulmarg in Kashmir.

We saw that the Orâons seem to take the Kaiser as a Good Rai Sarat Chandra Das Bahadur, as an Evil Power taken as an Evil Spirit and as being a person who turned a sweet water lake into poisonous lake. It is that of the well known Tibetan traveller, Rai Sarat Chandra Das Bahadur, C I E, a daring and enterprising traveller who travelled in Tibet about 40 years ago 1. He was taken by the people there to be an Englishman and the following story is given about him

"A strange story is told about how it, the lake, turned poisonous. About twenty years ago, as the Tibetans tell, the famous Sarat Chaudra Das, an Indian by birth, who passed for an Englishman, came from India and pronounced a spell upon the lake, the water at once turned as red as blood A Lama, they say, came along and turned the water back to its original colour, but it still remained poisonous. One cannot believe anything that the Tibetans say, but the water seems to have really turned Sarat Chandra Das cannot have done that, but, unfortunately for him, it was just after his return from Tibet that the water thus changed Sarat Chandra Das, as every one knows. is an Indian, but Tibetans, with few exceptions, think him to be an Englishman Any way the water of the lake must have been poisonous for a long time, for the water is stagnant, there being no current, and there are diverse poisonous elements near the lake "

<sup>&</sup>lt;sup>1</sup> For the cruel punishment meted out by the Tibetans to a grand Lama, who assisted Rai Sarat Chandra Das Bahadur, vide "Lhasa and its Mysteries" by Dr. A. Waddell, (1805.), pp 7-8

<sup>1</sup> Hed Vol. 1 No. 7 pp. 204-103

<sup>1</sup> Ibid. pp. 419-5.

In all these incantations or charms, the name of king Faridun, the great Peshdâdian king, referred to by Sir Walter Scott in his Talisman, is invoked. The first of the amulets begins thus "In the name of God. In the name of the strength and splendour of Faridun, &c." The second runs thus "By the name of the Creator, the Omniscient Lord.... By the Glory of God, by the Glory of brave Faridun" In the third, after an invocation of God, the formula for consecrating the sand, which is to be thrown in the field, &c., runs thus "By the name and strength of brave Faridun, &c. I shut up the poison and the venom of the mouth of all noxious creatures" In the fourth, the invocation to Faridun runs thus "We praise the holy Thraetaona (Faridun) of Athwyâna, who is master of purity, &c."

Thus, we find, that the name of the great king, Faridun, was invoked in amulets or incantations for various purposes, for securing freedom from diseases, fertility to ground, expulsion of noxious creatures, devils and demons, and for contracting friendships. As I have pointed out in the first of the above three papers, Faridun was not only a great king. but a great physician, and a great discoverer of medical drugs. He also freed Iran from the yoke of a foreign tyrant, Azi Dahâka (Zohâk), who was associated with the Devil or Satan

In the case of the Orâons also, we find that they invoke the German Kaiser to avert the evils of bad harvest and to drive away evil influences. In the case of Faridun, we know, that besides being a great powerful king, he was a great physician. We do not know, what other qualifications have been attributed by the Orâons to the German Kaiser besides being a great powerful king. It would be interesting to know what thoughts about him are installed in their minds by the war news, or by the German missionaries or others.

This parallel reminds us of the truth of the saying, "There is nothing new under the Sun," Human nature is the same;

Twenty centuries after Christ we come across the same beliefs which provailed twenty centuries before Christ. That is so, not only emong what are called moultured people, but to a certain axient even among cultured people. Powerful personalities are honoured respected nay they are as it were worshipped and delifed even by the cultured.

Besides the incantations or amulets referred to by me in my

A Number of Incantations with king in which also the name of king faridum is faridum's name. The texts of the e are given in

the Paxend Texts.1 I give here e list of these

se The Incentation for writing an amulet (and) which is to be tied on the left hand

The Incantation for the removal of the oppression of the Dirs and the Darujs.

The Incantation for writing on amulet which is to be tied on the threat of a child.

The Incantation which may be read over a child, attacked with sickness and trouble

The Invantation for the oure of the fever which comes on everyday or alternate day or third day

The Incantation for writing the amulet and tying it on the hand, so that a woman may be wise and virtuous, i.e., if the wife of somebody does not go to the house of her husband, this amulet may be written and tied on the left hand, so that she shall most assuredly go to the house of her husband.

The Incantation for writing the amulet for the purpose of bringing about reconciliation between a man and his wife.

Incantation for writing the amulet and tying it on the left hand so that head-ache, wounds and all pains may be cured

The style and construction of all the amulets are well nigh the same. (a) They generally begin with the The composition Pâzend and Avesta introduction which inof the Persian Incantations. troduces most of the Parsee prayers. (b) In the middle, occurs the invocation of a particular Yazata or angel. the Yasht in honour of whom contains some signification, even the slightest, of the complaint for which the amulet is (c) Then, there is the invocation of the name of intended Faridun in the style of the amulets described in my above (d) Then the incantation ends with short prayer-formulæ with which most of the ordinary prayers end. The compilers of these amulets, as can be seen from the Persian headings, do not seem to be literary persons

There is a custom still extant among the Parsees, which, Another Parsee though not on all fours, is somewhat akin to custom akin to this this. It is that known as that of "Dasturi bhanwi" i.e., the recital of the name of the Dastur. In a ceremony connected with the disposal of the dead and in the purification ceremony known as the Barashnum, the performer of the geremony recites the name of the Dastur or the Head-

<sup>1</sup> Jbid p. 187.

<sup>&</sup>lt;sup>2</sup> Ibid p 189

priest of the town or only to say, that all that he did was according to what was enjoined by the Dastur of the time. He is supposed to recite the name to give some importance and efficacy to his work. This reoltal is given in the Pazend Texts under the heading

16 This Dasturi to be recited in béjor in suppressed tone.
It runs thus

### Appendix

After writing the above for the Society's meeting of April 1916. I have had the advantage of reeding extracts' from the judgment of Mr. R. Carlick President of the Special Commission appoint of by Government to inquire into two cases arising out of the unrest. The history of the socitious movement as it appears from the judgment is this. The movement began at first among the Ordens of Chôth Nigpur and then appear to the 60 000. Orden coolies in the tea gardens of the district where since November last nocturnal meetings were held and hymns.

I Papend Texts by Ervad Edelji K. Antis, p. "02

I Here the name of the Destur is mentioned

<sup>1</sup> Vide the Times of India of 1st May 1018, p. 18

sung to the German Babaac, the Gorman father. This German Biba, by whom the Kaiser was meant, was invoked as a god (a) to come and drive out the English who were taken to be devils and (b) to give the Orâons an independent rûj or rule The movement was introduced among the Orâons of Sarugaon Tea Estate by one Landroo who recruited cooles for the estate from Chôta Nagpur At the nocturnal meetings on the estate, libations were poured (a) first to the Sun in the East (b), then to the German Bâbâ in the West Then songs were sung, saying that the Sun was coming and casting out the devils and drowning them into the sea. In the word 'devils,' the English were included They expected that the Germans would come, kill all the English in India and establish a Orâon 123 within A seditious song sung by the Orâons of the Tea three years Estate ran as follows :-

"German Bâbâ is coming,
Is slowly slowly coming.
Drive away the devils Manaldanal
Cast them adrift in the sea.
Surj Bâbâ (the Sun) is coming,
The devils of the Oven will be driven away
And cast adrift in the sea
Tarijan Bâbâ (the stars) is coming,
Is slowly slowly coming
Is Coming to our very court-yard,
The chigri devils will be driven away
And cast adrift in the sea."

We see from this song, that herein, there is an expression of their usual belief in the existence of evil spirits which are driven off by an appeal or invocation to good spirits like those of the Surj (Suraj or Surya) ie, the sun and the Tarijan (Taras) ie, the stars The new elements in the song are those of including (a) the English among the evil spirits and (b) the Germans, through their king, the German Bâbâ, among the good spirits

This song confirms my above view that the German Kaiser was looked at as a good spirit and not as an evil one. I find soveral elements common to this Orâon song of incantations to the incantation of the Iranians and to the beliefs connected with the devil-driving processions, as Mâtâ no rath and Janishikâr and with rituils of some of the peoples of India Some of these common elements are the following —

- I Where a man is delified or sanctified and invoked c.g., king Faridun in the Iranian monutations and the German Kaiser in the Ordon ones, the invocation is preceded or accompanied by an invocation of a greater heavenly power. In the Iranian incantation Ahum Mazda, His Ameshaspentas or archangels and Yazatas or angels like Smosha, and the Sun are invoked with king Fordun. In the Ordon incantation, Sarj the Sun is first invoked.
- 2 The Sun and the stars are common to the Iranian and Orden incantations Iranian incantations speak of Tishirya (the Siruis) and other brilliant stars. The Orden incantation speaks of Tanjan (the stars) in general.
- 3 The driving nway of the oril spirits towards the sea is common to the Orion song of incantations and the Gujarati song of incantations of the Math-no rath. In some cases the driving away is towards dreary mountains or barren regions.
- 4 At times the particular evil powers demons or devils are mentioned by name. In one of the Iranian incantations is referred to above the Auro Tarowal and Aarapan are specially mentioned. In the Orson meantation Manaldanai and the Chieri devils are specially mentioned.

One characteristic of the unrest movement is that the Christian Ordons were excluded from the meetings. This according to the judgment in the case tends to show that the morement cannot have been deliberately organized by any German missionary but it seems clear that it must have been started by some Gorman agent or by some agitator of by some impeator

<sup>1 &</sup>quot;A Treatise on the Situation, Manners and Inhabitants of Germany and the Life of Agricola," by C Cornelius Tacitus, translated into English by John Aikin, M D, 1823, Preface, p V

This song confirms my above view that the German Kaiser was looked at as a good spirit and not as an ovil one. I find several elements common to this Oraon song of meantations to the meantation of the Iranians and to the beliefs connected with the devil-driving processions, as Mâtâ-no rath and Jani shikir and with rituals of some of the peoples of India Some of these common elements are the following —

- 1 Where a man is defined or sanotified and invoked e.g. king Faridun in the Iranian meantations and the German haiser in the Oraon ones the invocation is preceded or accompanied by an invocation of a greater heavenly power. In the Iranian incantation Ahura Mazda, His Ameshaspentas or archangels and Yazatas or angels like Straesha, and the Sun ere invoked with king Faridun. In the Oraon incantation Surj the Sun is first invoked.
- 2 The Sun and the stars are common to the Iranian and Ordon incantations frunkan incantations speak of Tishtrya (the Siruis) and other brilliant stars. The Ornon incantation speaks of Turijus (the stars) in general
- 3 The driving away of the ovil spirits towards the sea is common to the Orlon song of incantations and the Gujarati song of incantations of the Muld-no rath. In some cases the driving away is towards dreary mountains or barren regions.
- 4 At times the particular evil powers demons or devils are mentioned by name. In one of the Iranian incantations 1 referred to above the Auro Tarowni and Karapan are specially mentioned. In the Orion incantation Manaklanal and the Chigri devils are specially mentioned.

One characteristic of the unrest movement is that the Christian Oraons were excluded from the meetings. This according to the judgment in the case tends to show that the movement cannot have been deliberately organized by any German missionary but it seems clear that it must have been started by some Gorman agent or by some agitator or by some impantor.

<sup>&</sup>quot;A Treatise on the Situation, Manners and Inhabitants of Germany and the Life of Agricola," by C Cornelius Tacitus, translated into English by John Aikin, M.D., 1823, Preface, p. V

The present war has drawn the attention of the whole civilized world to Germany Just ns, as said by Gibbon, the ancient Germans were surveyed by the discerning eye, and delineated by the masterly pencil of Tactius, the first of historians who applied the science of philosophy to the study of fact 2 the modern Germans are now surveyed by the discerning cycs of many nations and delineated by the masterly pencils " of many a great man of these great nations

#### 11

Many n person and many n question are now seen by great men of different nations from angles of

The Germans and Britons Are they cousing? Change in the angle of vision

men of different nations from angles of values," different from those with which they were seen before the war. Among such persons take the instance of the late Prof.

Nietzsche the author of Also sprach Zarathushtra (Thus spake Zarathushtra) He is now classed with writers like Herr Treitschke, and is held responsible for the present hent of mind of the Germans. It was not so before the war when though there was some difference of opinion about the real meaning of his teachings, he had a number of admirers especially of his teachings in the form of aphorisms. Even now he is not without admirers, or at least defenders oven in England who point to passages after passages from bis writings which tend to show that he was against what is now spoken of as, the militarism of Germany

One of the questions now seen from a different angle of vision is. Whether the Germans and Britons are cousins? They were generally spoken of as such. But now Dr. Arthur Keith one of the greatest scientists and a great anthropologist of the present day presents another angle of vision and says that the modern Germans are not the cousins of the

A. D 65-150

Gibbon's Decline's 't half of the Boman Limpire Chip IX | 1 of 1815 Vol. 1 p. 1\*8.

modern British He does not jump into the arena with a brand new theory, but presents his case on the authority of some previous scientific writers and of modern scientific facts. He thus presents his case 1

Germans colour Great Britain, Holland, Denmark, Norway and Sweden with the same tint as their own Empire, to indicate that all those lands are inhabited by branches of the great Tentonic family. Our best historians are inclined to admit the German claim, we cannot dony, even if we had the desire that English and German are cousin tongues. It is an historical fact that the Anglo-Saxons came from lands lying on the western shores of the present German Empire. Those, however who have studied the modern populations of Britain and Germany have reached a very definite and very different conclusion—namely, that the Briton and German represent contrasted and opposite types of humanity.

An article entitled "The War from a new angle Are we cousin to the Germans" in the Graphic of December 1915, p 720

the Anglo-Saxons to Britain in the fifth sixth seventh and eighth centuries of our era Germany was almost denuded of the long headed elements in her population even in those early conturies the German long heads' were concentrated in the western shore lands and in modern Germany it is only in these same lands forming less than one-fifth of the total empire that we find a good proportion of long heads amongst the German people When the Franks and Anglo Saxons were moving into France and England the great area now covered by the German Empire had been invaded from the cast-from the regions now occupied by Russians Poles and Czeolis-by swarms of people with flat occiputs and short heads men of the Hindenburg type History relates that by the end of the sixth century this type had overrun all the area of modern Germany except the lands along the western shores We now know however that the permeation of Germans by men of the Mindenburg type (se the short heads ) did not begin with the break up of the Roman Empire. In ancient graves of the early from bronze and neolithic ages we find the Hindenburg type showing that the westward movement of the flat occiputs had set in thousands of years before the days of the Roman Empire

I give here the portraits of the two types referred to by Dr. Keith

It is the above article of Di Keith that has suggested to me the subject of this paper. From the above long passage, quoted from Dr. Keith's article, what we learn is this—

- 1 The Britons and Germans were, at one time, kith and kin, or cousins (a) The ancient History of these two countries and (b) Philology, the science of languages, show this
- 2 They are no longer kith and kin or cousins now. Anthropometry, a branch of Physical anthropology, shows this
- 3 When they were kith and kin, both were long-headed with prominent occiputs
- What has broken up the consinship, is the fact, that, whereas the whole of Britain has up to now continued to be long-headed with prominent occiputs (i.e. the back parts of the head), Germany has now mostly become short-headed with a flattened occiput

It is not only on the attention of the Britons, that the ancient Germans, as said by Gibbon, have a strong The ancient Gerand domestic claim, but also, to some extent, mans and the Indo Iranuana. the attention of the Indo-Iraniansthe Hindus and the Parsees Di Keith has referred for the proof of the old cousinship to the evidences of history and language. (a) The very fact, that the ancient Germans belonged to the Aryan group of people and that their language belonged to the Aryan stock of languages, known otherwise as the Indo-Germanic group, points to their claim, however small, upon our (b) Again, their tubal or communal constitution and some of their old customs remind us of our old Indo-Ilanian constitution and customs For example, as we will see later on, their Townships have been compared to our Village-punchayets. (c) The Indian custom of prohibition of widow-marriages and (d) the custom of Suttee have their parallels among the Germans (e) As regards history, though the

history of India or Iran is not closely related to that of ancient Germany it is not altogether without some connection The ancient Germans, at least some one or another of their tribes, at one time or another had formed an alliance with the ancient Roman Empire and, as such allies forming a part of the Reman Army fought against the ancient Persians in the long wars of Rome with the Persians. (f) Again take the case of their contact with the Huns, who under one name or another had a long history of about 2,000 years, during which they ruled and exerted power in one part or another both of Asia and Europe, and made their power felt in various countries from China in the East to Gaul (modern France) in the West When checked in the East, they pushed to the West, and rice versal Those Huns were moving to and fro like the waves of an ocean On one hand they had some share in the diffu sion of the ancient German tribes and on the other they had some check from the Germany Their check in the West had some influence on their inroads in the East-in Persia and oven in India

The ancient Persians under the Sasanian kings were under mining the power of the Louisius in their Lastern provinces the Seythian and the Sarmatian tribes which spread from the Caspian sea down to the river Vistula were doing so in some of their Verthern territories and the ancient Germans did this in their Western provinces. As dibbon says the ancient Germans first resisted then invaled and at length overturned the western monarchy of Rome. The e-wild barbarians became the formidable encube of the Louisian became the formidable encube of the Louisian through the Huns some connection however distant with the history of Persia and even with that of In its

(abbon the refers to the commencement of the above influence of the Persons on the history of I one on which

<sup>1</sup> Olision a Decline and Fall of the II man I impire; Clap IX 1 1 to 1 5.

ancient Germany also exerted its influence "In the more early ages of the world, whilst the forest that covered Europe afforded a retreat to a few wandering savages, the inhabitants of Asia were already collected into populous cities, and reduced under extensive empires, the seat of the arts, of luxury, and of despo-The Assyrians reigned over the east, till the sceptre of Ninus and Semiramis dropped from the hands of their enervated successors. The Medes and the Babylonians divided then power, and were themselves swallowed up in the monarchy of the Persians, whose arms could not be confined within the narrow limits of Asia Followed, as it is said, by two millions of men, Xeises, the descendant of Cyrus, invaded Greece. Thirty thousand soldiers, under the command of Alexander, the son of Philip, who was entrusted by the Greeks with their glory and revenge, were sufficient to subdue Persia The princes of the house of Seleucus usurped and lost the Macedonian command over the East About the same time that, by an ignominious treaty, they resigned to the Romans the country on this side of Mount Taurus, they were driven by the Parthians, an obscure horde of Scythian origin, from all the provinces of Upper Asia. The formidable power of the Parthians, which spread from India to the frontiers of Syria, was in its turn subveited by Ardshn, or Artaxerxes, the founder of a new dynasty, which, under the name of Sassamdes, governed Persia till the invasion of the Arabs. This great revolution, whose fatal influence was soon experienced by the Romans, happened in the fourth year of Alexander Severus, two hundred and twenty-six years after the Christian era "1

All these facts lead to show that the history of the ancient Gormans, claims our attention also, though perhaps not to the same extent as that of the Britons At the present time, when the former views of friendship or cousinship are revised and many a question is examined from different angles of vision, and

<sup>1</sup> Gibbon's History of the Decline and Fall of the Roman Empire. Chap VIII (1845), Vol. 1, pp 117-18.

when in that examination history philology &c., are referred to some knowledge of the ancient history, constitution manners and customs of the ancient Germans, one of the old branches of the old Aryau stock, will I hope, be found interesting by many especially by members of an Anthropological Society like ours

#### ΤIΤ

Ethnographical countralup between the English and the Germans, and among several fight ing nations of the present war

bustly we will speak on the subject of the consinship of the English and the Germana We can look to this subject both from (a) the wide ethnographical and (b) the philological points of view From both these points of view we find that the English and the Germans are

cousins. Let us take the ethnographical question first. The Human family is divided by Ethnographists into three principal divisions -1 The White or Caucassian stock of men which contains about 640 millions 2 The Yellow or Mongolian or the Taran Chinese stock containing about 600 millions 3 The Black stock. It is believed that the Yellow or the Mongollan stock preceded others

The first s.c. the White stock is divided into three sections 1 The Egypthin 2 The Aryan or Indo-European or Indo-German 3 The boundes or Shemites.

The Aryans again are divided into 7 principal branches (1) Iranian (2) Hindu (3) Greek (4) Italic (5) Celtic (6) Teutonic and (7) Slavic or Slavenic

Looking to the first large division into three groups we find that not only the English and the Germans but we the Indians and Iranians olso belong to the same group-the White or Caucassian group-and are cousins Coming to the subdivision of this first large group of the White or Cancassian stock, we continue to be germane or cousins as we belong to the same Aryan or Indo-Enropean or Indo-Germani subdivision Descending one step further in the sub-sub-division of the Aryan stock, we find that the Germans and Britons still continue to be cousins or germane

The Germans belong to a branch of the Tentonic race, which itself is a branch of the Arvan race. Among the belingerents of the present war the principal are the following -1 The English who belong to the Tentonic branch of the Arvans 2. The French, who belong to the Italic branch of the Aryans 3 The Russians, who belong to the Windie or Slavonic branch of the Aryans 4 The Germans, who belong to the Teutome branch 5 The Austrians, who belong to the Teutonic branch. 6. The Belgians, who belong to the Windle branch 7 The Serbians, who belong to the Windle branch S The Turks who belong to the Turaman stock The Japanese who belong to the Turanian stock 10 Italians who belong to the Italic branch of the Aryans The Bulgarians who belong to the Windie or Slavonic branch. Thus we see that most of the fighting nations are Aryan

If we look to the principal races of the powers that fight in the present war, as given above, we find that, as far as the majority of the nations is concerned, it is to a certain extent a civil war between the cousins of the same Aryan group. But when we look to all the people or nations that take a part, great or small, direct or indirect, in the present war, we find that it is very properly termed a world-wir. Di. Keith, in his geneological tree showing the descent of Man, referred to in one of my former papers before this Society, divided Humanity extant, into 4 groups, taking the nomenclature into a very wide sense—African, Australian, Mongolian and European. Looking to the fact, that representatives of all these four groups take some part in this war, it is really a great world-war a great human war—a war among all the offshoots of the Human stem now extant

#### IV

Philological cou ainship

Looking to the subject from the philologreal point of view we find the same cousin

ship existing

I give here a table which gives the general division and sub-divisions of the languages of the many nations of the world From this table we see that people speaking the languages of almost all the principal stocks into which languages are divided fight in the present gigantic war. This table shows that not only are the German and English languages the "cousin tongues as referred to by Dr Keith but that the Indian and Iranian languages also are distant consultongues"

As Prof Max Muller sars The Arvan languages together point to an earlier period of language when the first ancestors of the Indians, the Persians the Creeks the Romans the Slavs the Celts and the Germans were living together within the same enclosures nav under the same roof" At this time they spoke a common language which can be called the mother of the languages of them all

He will now speak of (a) the early history of the ancient ( er mans and (b) of the institutions, religion and manners in historic times as described by Tacitus in his Germania Tacitus was a famous Roman historian who fixed from AD 5, to 130 Of all his works on history his history of the ancient Germans is well-nigh complete and much admired. Ciblem has drawn largely from it in his Histors of the Decline and fall of the Loman Empire ! for his account of the ancient Cermans from very early times to the time of Emperor De au who took the imperial dignits in 240 carried an expedition again t the Persians persecuted the Christians and illed during his march

<sup>1 15</sup> d Chap. IX entitled. The State of Germany till the little (on the Roman Impire) of the Richards in the time of the Imperor Deckte.

against the Goths Tacitus dealt with the history, institutions, manners and customs of the ancient Germans, because, both before his time and in his times, they had come into contact with, and had affected the history of, his own Roman people To understand that contact and influence clearly, one may very profitably peep a little into the history of ancient Germany That history presents a very wide field for treatment, but we will cast a mere glance upon it, because it is some parts, here and there of that history which presents to us some traits of the character of the people, who, at one time, were the close 'kith and kin' of the great English people. The history of ancient Germany, is, in some of its parts and to a certain extent, the history of the Roman Empire, because the ancient Germans had, with others, a strong hand in bringing about the downfall of the Roman Empire It was in the company of the Romans, as their allies, or as soldiers in their service, that the ancient Germans had fought with the Egyptians and the ancient Persians So, in considering their ancient history, we have to a certain extent, to consider also some periods of the history of ancient Rome That being the case, I hope, some digressions in this paper will be held pardonable.

The word German is variously derived The variety of these

The various etymologies of the word German, showing the variety of their influence derivations shows the sphere of the influence of the country on adjoining nations. The English word "Germane" in the sense of "related, allied, akin," has some connection

with one of the following etymologies, and suggests the question, whether it was not adopted by the English with some idea of relationship or cousinship with the German

(a) According to Tacitus, (Ch II) 'German' was the name of a tribe which crossed the Rhine and expelled the Gauls The name of the tribe was latterly adopted by the nation in general 1 (b) Some derive the name from Lat Germanus

<sup>1</sup> According to Casar, the Belga, the people of modern Belgium, were descended from the above tribe of the Germans

meaning neighbour 1 the adjoining Gouls (of modern France) applied this name to thom. (c) Some derive it from a Celtic word for shouters the word being applied to them on eccount of their war-ory. Tacitus refers to their barding poculiar verses which gave them courage in their war with the Romans (d) Some derive the word from "Weltmann" i.e. a man of war, applied to them on account of their early military operations. The French speak of the country as Allemagne from the name of the tribe of Allemanne (i.e., all men) who all possessed lands in common. The Germans call themselves. Doutsch which word comes from Gother Thoula meaning the people. Their Roman name. Teutons is a rendering of an old form of Doutschen.

The extent of ancient Germany at the time when Tocitus

Boundary of An
eleat Germany is a D 05, was great It was "separated
from Goul (modern France) Regis (modern
Baveria and the adjouring country) and
Pannonia (Lower Hungary and part of Austria) by the rivers
Rhine and Danube from Sarmatia (the plain from the Vistula
and the Decester to the Volga) and Dacia (modern Makdavia)
by mountains

The rest is surrounded by an ocian?

(the North Sea or the German ocean)

In the third century an Germany excluding the Reman provinces westward of the Rhuse included nearly a third part of Furope It included modern Germany Denman Norway Sweden Finland, Livonia (a Baline province of Furopean Russia) Prussia and the greater part of Poland 1 Inshort

It is this derivation that has given the word referring " in the serve of related to the Lighth. It is word noting that the name of some other places are similarly derived; for a mple the name Pahlavi (Latthia) has come from a similar derivation. But it the name Paris.

<sup>1</sup> Gibbon, Chap 18 Lak of 181. p. 1

it included besides the states which form the modern German Empire, portions of modern Austria Switzerland, the Netherlands and some other adjoining districts. The complexion. menners and language of the people of all these countries "denoted a common origin and preserved a striking resemblance "2 This large country was bounded on the west by the Rhine which separated it from the Gallie proximes of Rome - It was bounded on the south by the Danube, which divided it from the Roman province of Illyra (the Eastern coast of the Aduatic, meluding modern Cro tix, Dalmatic and Herzegovina) The eastern boundary often varied, because the Germans and the Sarmatians often warred. But, generally, the Carpathian mountains on the east of Hungary formed the eastern boundary. The northern boundary lay beyond the Baltic and the Scandinavian pennsula, containing Norway and Sweden 4. It is said by modern scientists that the level of water in the Baltie falls I an inch every year So, about 2,000 veirs ago, at the time of the ancient Germans, a great part of the modern Scandmavian pennisula must be under the waters of the Baltic

According to Plmy (a D 23-79), who haved some time before Tacitus, Germany, whose coast line in a straight line was said to be 686 miles, and when indented, about 2,500 miles, was inhabited by several German nations or tribes

These were —1 the Vandih, a Gothic race which originally dwelt on the northern coast of Germany 2 Ingrevones 3 Istrayones 4 Hermones 5 Pleucini

The Vandih included (a) The Burgundians, supposed to be a Gothic people, (b) The Varini, dwelling near the sources of the Vistula on the site of the present Cracow, (c) The Carini, (d) The Gutones, otherwise known as Gothi, Gothones, &c They

<sup>1</sup> Ibid.

<sup>&</sup>lt;sup>2</sup> Gibbon's History of the Decline and Fall of the Roman Empire, (1845), Vol I, p 128, Chap IX

were divided latterly into Ostrogoths and Visigeths who invaded the Roman Empire in the time of its decline. The Ingravenes included the (a) Cimbra a Celtro or Gallic race (b) The Tentoni or Tentones who latterly gave their name to the people of the whole of Germany

According to Tacitus (Chap II), ancient Germany was a land rude in its surface ricorous in its The physical na-ture of the country chmate oheerless to every beholder and and its influence on onlineator except a matrice 1 It is said by the constitution of the people. scientists that in ancient time all the tracts of nucent Germany which was much wooded was colder than now Gibbon advances two facts to prove this -(1) Great rivers like the Rhine and the Danube were frozen to such an extent that foreign invaders at times, chose the winter for their invasions so that they may march over the frozen rivers and be saved the teenble of crossing them (2) Reindeers which live only in cold countries and which are now seen only in the northern regions were necording to old authors soon in the southern latitudes of ancient Germany

This cold weather gave the nuclent Germans vigour and long life. The women were more fruitful and the human species more profife than in warmer or more temperate climates." One nuthernty says, that the wemen of Sweden which in one time was a part of ancient Germany bear twenty or thirty children. Gibbon says that the keen air of Germany formed the large and masculine limbs of the native who were in general of a more lofty stature than the people of the South gave them a kind of strength better adapted to violent exertions than to patient labour and inspired them with constitutional bravery which is the result of nerve and spirits.

<sup>1</sup> Chap. IX Vol. I, p. 199

## VI

According to Tacitus, Tuisto, who sprang from the earth,

The origin of the Germans Their founders of the German race Mannus had three sons, whose names gave their names to three tribes: (1) The Ingævones, who were the people bordering on the ocean, (2) Herminones, who lived in the central parts, and (3) Istævones, who lived in the rest of the country.1

This Tuisto, the father of the German race, is thought to be the Teut or Teutates, known to the people of Gaul and Spain as a Celto-Scythian king or hero, and as a conqueror and civilizer of a great part of Europe and Asia. The three sons of Mannus, who gave their names to the above three tribes, were Ingaff, Istaff and Hermin. Dr. Aikin sees in this obscure tradition of the descent of the German tribes from the three sons of Mannus, a relic of the tradition of Cain, Abel and Seth, the three sons of Adam or of that of Shem, Ham and Japhet, the three sons of Noah, from whom different people of the world are supposed to have taken their descent <sup>2</sup>

Whether what Tacitus says is or is not, as pointed out by Dr Aikin, a relic of the tradition of Cain, Abel and Seth, we see from his statement, that a Celto-Scythian king or hero had come to the land of Germany as a conqueror. So, in this conquest, we see the trace of the following statement of Dr. Keith, included in our long quotation given above in the matter of the couzinship of the Germans and the Britons "We now know however, that the premeation of Germany by men of the Hindenburg type did not begin with the break up of the Roman Empire In ancient graves of the early iron, bronze and neolithic ages, we find the Hindenburg type, showing

<sup>&</sup>lt;sup>1</sup> Chap II, p 5

<sup>&</sup>lt;sup>2</sup> This tradition reminds us of the Iranian tradition of Selam, Tur and Erach, the three sons of Faridun, who gave their names to three countries of Asia and became the progenitors of their races ("Le Livre des Rois" per M Mohl, small edition, Vol I pp. 104-5.)

that the westward movement of the flat occiputs had set in thousands of years before the days of the Reman Empire" According to Tamtus 1 there were some who believed that the above Tuesto the father and the founder of the German stock had more descendants than the above three grand sons From those descendants came the ancient German races of the Marsi, the Gambrivil Suevi and Vandali. These were as it were the first original genuino Gorman tribes or races these the Sucvi are the only race that have continued. The Vandali, the Vindili of Pliny the Vandals of later historians latterly overran Gaul Spain Africa and Italy During their inroads into Italy they destroyed many beautiful specimens of art. It is they who have given us our modern word van Tacitus adds that later on, there arose another tribe called Germans, whose special name in his time was Tungri It is this tribe that gave its name to the whole people. The word German was at first Wehrmann se a man of weapon or a warrior This particular tribo being first victorious other tribes also in order to strike terror among others assumed this name of Wehrman (weapon men or warriors Germans) Thus the name of one tribe was latterly assumed by the whole nation. It appears from an inscription, which is dated 200 B C and which records the victory of Claudius Marcellus over a Callic tribe and the German tribe that this German tribe, which gave its name to the whole people existed long before 222 ii c Crear in one of his works (Bell Gall II 4) refers to this German tribe and says that some of the Belgy (proude of Beigium) descended from them

The principal tribes as found a little later on were the foll wing —1 The Chatti who lived in Heas. The modern He ians are their descendants 2 The Saxons of Hel tein on it the Angles in Schleswig. The notwo invaded Britain interior. The Angle-Saxons or the English are their descendants ? The Sucri or busbians who lived on the south and the east of the

land of the Saxons The Marcomanni or Marchmen on the Rhme at the frontier of the Kolt and the Lengobards on the Elbe, from whom modern Lombardy receives its name, are their offshoots 4 The Goths, who lived at first near the sources of the Vistula 5 The Vandals 6 The Burgundians The tribes in the south were migratory, half of their people going for war and half living in the land alternately. Those in the south generally lived on their land as permanent farmers. Tacitus even records a tradition which connects some Greek influence with the Germans He says "Some imagine that Ulysses, in the course of his long and fabulous wanderings, was driven into this ocean, and landed in Germany . . . . They pretend ..... that certain monuments and tombs, inscribed with Greek characters, are still extant upon the confines of Germany and Retia" According to Dr. Aikin, "the Greeks, by means of their colony at Marseilles, introduced their letters into Gaul, and the old Gallic coms have many Greek characters in their inscriptions. From thence, they might easily pass by means of commercial intercourse to the neighbouring Germans "2

Dr Keith says, that the modern Germans, as a body, are not the direct descendants of the classical Tacitus on the classical German It appears, as if a similar Germans question was raised, on some other grounds, in the time of Tacitus, who defended the classical Germans, saying, that they were a pure-blooded race. He said 3 "The people of Germany appear to me indigenous, and free from intermixture with foreigners, either as settlers or casual visitants" Tacitus assigns two reasons for the purity of the blood of the Germans Firstly, "the emigrants of former ages performed their expeditions not by land but by water," and the boisterous and unknown North sea or German ocean, which provided the route for such emigration, was rarely navigated in those times Secondly, no emigrants from Asia, Africa or Italy would

<sup>1</sup> Chap. III, Ibid. pp 9-10

Ibid, note d

care to go to a country like Germany with a land rude in its surface rigorous in its climate cheerless to every beholder and cultivator except a native. Tacitus further says (chap IV) 'I concur in opinion with those who suppose the Germans never to have intermarried with other nations but to be a race pure, unmixed, and stamped with a distinct character. Hence a family likeness pervades the whole though their numbers are so great eyes stern and blue ruddy hair large bodies, 'powerful in sudden exertions but impatient of toil and labour least of all capable of sustaining thirst and heat Cold and hunger they are accustomed by their climate and soil to endure.

But the above view of Tacitus of the ancient Germans being indigenous is not upheld now. The Germans of Germans were not the first occupants of the lard which they call their father land Before the ancient Germans occupied by another race of whom much is not known. There are several facts which lead to show that the country was occupied by other people and that the ancient Germans went there from some other place. Mr. Baring Gould 2 advances several facts to show this.

1 In the North soveral burial mounds are discovered which the peasants call the Huns graves, but which do not belong to the Huns but to an unknown people 2. The names of some places in the South point to a previous population of the Selavs who were of the same class as the modern Russians Poles and Bohemians. 3. Their ancient laws distinguished between seris who were the older occupants of the lands and the freed men, who were the new occupants (Germans) and prohibited intermatriages. If any of the new occupants man

<sup>1</sup> The Germans " are still accounted some of the table prope in flurone " Mkin.

<sup>1 &</sup>quot;The Story of the Nations," series, Q rmson by Mr. Il ring Go td. Chep. IL

ried with one of the older aborigmes, he lost his freedom, and his children were illegitimate. The modern German law which prevents a German prince from marrying a lady other than that of the royal family, is a relic of the old German law or custom. The law was observed to keep the old Teutonic blood pure. In Bavaria and Baden, the Germans are not pure-blooded and they seem to have a mixture of the blood of the older conquered aborigmes.

### VII

During the time of Augustus (63 B. C.—A D. 14), who "had divided with the (Roman) senate the direct The ancient Geradministration of the provinces, choosing mans' early connection with Rome for his own all those in which large aimies were maintained for the repression either of turbulent subjects or of aggressive enemies," the whole of Gaul beyond the Alps was under his administration. This Gaul was divided into several commands. The districts bordering upon the Rhme, known as the Upper and Lower Germany, formed one of the commands During his reign, "Pax Romana" or Roman peace prevailed to a great extent, and he had the honour of performing, for the third time, the auspicious and sacred rite of closing the temple of Janus, the god of peace, which, according to custom, was kept open only during wars. During the 700 years before his time, the temple was closed only twice, the reason being, that Rome was always in war in some part of the world. During his own time, he is said to have closed the temple three times. Augustus had thought of repeating the attempt of Cæsar who had failed to conquer Britain in person

In about 133 B C, Tiberius Gracchus and Caius Gracchus, as tribunes of the people saw the necessity of the Germans with Rome, after the Agrarian Laws community by new Agrarian laws The nobles and the senators, whose vested rights were to be disturbed, opposed the attempts to pass the laws.

<sup>&</sup>lt;sup>1</sup> General History of Rome by Dr Manvale (1891), p. 399, Chap. LI

In spite of the opposition, the laws were powed, but the nobles tried to make them ineffective. At this time, there occurred an event which led to belp the nobles in their reactionary measures.

In 113 B c the Cimbri and the Teutones two German tribes threatened to overleap from the heart of Germany the barrier of the Alps and to invade Italy. It was the want of Broad and Butter that led them to do so. They wanted land from Italy and promised alliance in roturn. They defeated the Roman general Papirius Carbo who was sent against them. They offered some of the Romans whom they had taken prisoners as sacrifices to their god Wuotan (the Iranian yazata Vâta or Guâd) who presided over all and who has given his name to a day of the week, Wednesday (Unctantag or Wuotanday). These German tribes did not pursue their successes further into Italy but entered Gail soon after.

Just as in the present war the common foreign enemy the Germans have united the two lighting parties in England the Ulsterites and the Nationalists of Ireland the then Germans united the two factions, the nobility and the communality of frome into one

I rome 100 to 107 n. c. the Germans again defeated the Roman force cont against them in Gaul, but fortunately relia med from attacking fielly. Then in 102 n.c., the Gint n and Holveti, and the Tentones combining together again invaded Italy. They were defeated. The Tentones who were killed and remained unburied gave the field of battle the name of Putrul Plain which name still exits in the name of a village called Lourrières. A hill in the locality called Saint Victoria has received its name from the victory celebrated there by the victorious General Marius. The people there still go to the summit of the hill and burn a heap of brushwood chouting. Victorie! Victore !! In another battle

the Cimbri also were defeated (B C 101). So great was the terror caused by this my asion of the German tribes that Mains, the victor, was honoured as the third founder of Romo after Romulus and Cumilius. The military uniform of these Germans consisted of hides of wolves, bears and oven with horns—a sight, which frightened the Roman soldiers much. Whenever the German tribes fled from the battles with the Romans, their women who always accompanied them, went towards them with raised endgels, and taunting them as cowards forced them to fight again. They themselves also fought with the Romans and preferred being killed to yielding. Here again it was the question of 'Bread and Britter' which forced them to do so because starvation stared at them if they returned to their soil, the grain of which they had eaten off

These German tribes, when they had to cross rivers, constructed bridges in a rude way. They first hilled from the banks rockstones in the rivers and then, cutting big trees threw their trunks across them. This was the first Tentonic or German invasion of Italy.

The Germans came into collision for the second time with the

The second contact of the Germans of Gaul in about 50 B C. The tribe of Markith the Romans of Marchinen closed the Rhine and took Burgundy. Julius Cæsar drove them back and Diusus and Tiberius subjugated them and took a part of Germany between the Rhine and the Wesei.

Armemus (Heimann), the chief of the Cheinsi tribe, living what is now known as Hanover, being taken as a hostage to Rome, took his little education there and learnt the lessons of Roman rule and warfare. In his case, there happened what happens nowadays. Our young men go to our ruling country to be educated there. They return imbued with ideas of liberty and freedom prevalent there and try to spread them in India. Hermann learnt at Rome, and thought- that some

of the noble and hrave deeds of the Romans can also be done by his German people if they were united and determined to do them

One other good thing on the part of Hermann was this He saw both, the weakness and the strength of the Romans He saw that they were rather beat too much toward pleasure and were slaves to possions while his countrymen, the Germans, were simple and had preserved pure the affectionate bond of relationship towards their kith and kin. He returned to Ger many imhued with the above thoughts and impressions. A short time after Quintilius Varus, a general of Augustus went to Germany with a Roman army to assert there the power of Rome Knowing that Hermann was educated in Germany he took him as his guide little anspecting his patriotic feelings for his country. It is said that Hermann led him to fight with the Germans in that part of Germany where the simple rude physical strength of his people could be more than a match for the improved was of warfare of the Remans. Varus wa completely defeated, his army was all cut off and he himself com mitted sulcide Hermann carried away three Roman engles (ban ners) This German victors over the I omans in A.D. 9 upset Emperor Augustus one of who e great armies was thus cut off He put on mourning by allowing his hair and heard to grow untrimmed and often went saying Varied Varied restore me my legions 1. The Romans expected an invasion from the Cermans but Hermann wanted no conquest. He only wanted freedom for his people from the voke of the Romans. He waas Mr Baring Gould says the first to have "the vi ion of an united Cermany " What this learned author says of Hermann is worth noting. He gave to the nations of German 11 and an example that was to bear fruit on the perceful fi 'I of Hunny mede when the Engli h Baron wrung the Magna Charta fr m King John for it was from the region in which Hermann fought

<sup>1</sup> Marie 1 History of Rome Chap, LIII Ed. of 1991 J. 440

E + Th tory of it at one series termany P IV

that our ancestors came, and we may take pride in him and in the great statue erected in his honour hundreds of years after his day by the princes of Germany on the culminating point of the Teutoberger Alps". The above referred to statue of Armenius (Hermann), whom Tacitus, in his Annals, calls the Deliverer of Germany, was begun by the celebrated sculptor Bandel in 1838 and finished in 1875

This victory of the barbarian Germans over the civilized Romans created well nigh a panic in Rome. There lived some Germans in Rome. What has happened now here and in England happened then. They all were placed under arrest. There were some German squadrons or regiments in the Roman army. They were immediately disarmed. After some preparations, the Romans sent another army against Germany under Germanicus. This army gained a small victory. The Roman army carried into Rome, Thusnalda, the beautiful wife of Armenius, who was with child. This lady was betrayed to the enemy by her own father Siegast, who had turned a traitor to his country and who had an heriditary feud with the tribe of Hermann.

In some subsequent internal quarrels, Hermann was killed by his own people Tacitus sings good many praises of this brave man Thusnalda, when carried to Rome, gave birth there to a son, who was named Thumchius When Germanius returned, later on, in triumph to Rome, she, with her child, was made to diag the chains of his triumphal chariot Tacitus, in his Annals, gives a detailed account of this war

After this time, the Romans kept themselves to a small part of Germany known as Titheland They protected this part from the inroads of the Germans by a wall connecting their frontier fortresses The traces of this wall are still observed and

<sup>1</sup> Ibid, pp 21-22

<sup>&</sup>lt;sup>2</sup> Germany, Present and Past, by S Baring Gould, Vol I, (1879) p 172

<sup>&</sup>lt;sup>3</sup> The Annals of Tacitus, translated by A J Church and W J J Brodrib Bk I S 55 et seq, (1891) p 27 et seq

known as those of 'The Devils Wall" The Romans had to do all this because now the Germans assumed the effensive The Romans had gradually built many known towns in parts of Germany They even built a town—Treves—in Belgium which was partly German.

Ever since the Romans conquered a part of Germany the Germans formed a part of the Roman army on and Ap The Germans formed a part of the Roman army on some occasions of danger the German squadrons or regiments were disbanded, in Egypt and Per this.

For example at the time referred to above when the Germans under Armenius or Her

mann defeated the Remans under Varus in the time of Augustus With the advance of the Reman armies, the Germans went with them even to the East—to Fgvpt Asla Minor and Persia

The Ptelemin dynasty of Egypt was founded in the early part of the 3rd century D C by Ptolemy The Germans in the son of Lagu, a Macedonian general of the Roman armic in Egypt Alexander the Great He serred Fgint on the death of Mexander These Ptolomies were not Frintians but were Macedonians. In the roign of Ptolemy VIII the Inther of the Jamous Cleopatra we first what Mr Meigall 1 calls the critical development the political relationship between Rome and Fgypt After the battle of Pydna (a.e. 167) the influence of Greece in the East un replaced by that of fome In the lat century n e. Home turned her covetons eve towards Egypt Ptolemy XII had appointed in his will which was made very early in his life the Roman republic in his heir in order to have some financial and moral support from the Lomans Auletes (Ptolefay VIII) the new king was much handicapped by the will He thought that perhaps one dis-Rome claiming to be the ucess it according to the will may out him from the throne of Paper & he always liked

The Life and Time of the sairs, Owen I Frypt I tody in the onen the Roma Employer by the a F I II II put p 4

to be in the good give of Rome. In 59 BC, he won tho recognition of his sovereignty from Rome by personally going there and bribing some influential senators. He was then dethroned by his people, his own daughter Bernice IV taking the throne. He had I other children by his second marriage. One of these was the celebrated Cleopatra. With the aid of the Romans under Gabinus, he was restored to the throne. Among the Roman army left in Egypt for his protection, wo find for the first time a number of German cavalry men. The Roman army was thinking of occupying Egypt for good, but then mind was diverted by the Parthians who were at war with them.

## VIII

Aulotes died in B c 51, enjoining by his will, that his eldest child, his daughter Cleopatra, and his son of Rome fighting proposed that this sister and brother, the joint successors may marry together according to an old custom of the Egyptians. Cleopatra, to assume the whole power, postponed the marriage on one excuse or another. Her brother's party in court was stronger

Two years after the death of Aulotes, Marcus de Bibulus, the pro-consular governor of Syria, ordered the Roman troops in Alexandria to join his army in his contemplated war against the Parthians. This Roman-Egyptian army contained Celtic and German cavalry. This was the first attempt to take the early Germans to fight against the Parthian rulers of Persia But this attempt failed. The cavalry did not then go as desired. Then, there arose the civil war between Pompey and Cæsar. The Egyptian-Roman army sided Pompey.

In Alexandria, Cleopatia quarreled with her co-ruler, her brother, and was obliged to fly to Syria, from where she sent an army to Palusium to fight with the army of her brother Ptolemy. At this very time, there came to Alexandria, Pompey after being

defeated by Casar at Pharsalia hoping, that Cleopatra's brother Ptolemy who ruled there might help him. But Ptolemy got him murdered in the hope of winning the favour of the victorious Casar Casar on coming to Alexandria was shocked at the murder of his rival and looked with displeasure at the murderers. He landed at Alexandria with his Celtic and German cavalry and lived there in the king's palace. Thus we see the Germans again in Egypt.

Casar now sent words to the battlefield of Polusium where the armies of Cleopatra and her brother Ptolemy were fighting that their dispute may be submitted to him for arbitration Ptolemy arrived at the Court but his supporters looking to the fact that Casar wanted to play the first fiddle in Egypt raised opposition and they and Casar both propared to fight

As to Cleopatra, who also was invited by Casar to attend she dared not come openly lest she might be malireated by her rival brother's partizans. So she thought of going secretly alone to Casar. She took a boat and then coming near the shores of Alexandria asked her confidential friend Apoliodorus the Sicilian to roll her up in the blankets and bedding which she had brought for her in the boat as a protection against the night air. As Plutarch says when the bundle was unfied Casar was at once "captivated by this proof of Cleopatra a wit."

We will not enter here further into the listery of the relations between Caesar and Cleopatra. After the death of Casar Cleopatra married his great nephew Antons. Her relations with Antony have been familiarized to us by Shakespeare in his Antony and Cleopatra. That play and several other writings even some good historical writings represent to the Cleopatra and Antony in a certain leaf light. But later writers 3 for example Mr. Guglielmo Ferrero and Mr. Arthur E. I. Browne Wensall.

<sup>1</sup> Life and times of Cleopatra by Arthur L. 1. 14 Weigett p. 40 2 File The Forial billy Berlew of April 1991 pp. 333-46

show us, that they, especially Cleopatra, were not so bad as represented by some ancient writers Both had a patriotic view even in their mairiage Cæsai, and Antony after him, looked to then marriage with the Egyptian queen as a step towards uniting Egypt more firmly with Rome That firm union was an important step in the proposed conquest of Persia under the Parthans by Rome In this conquest of Persia, the German cavalry, as a part of the Roman army, was expected to play an important part. In the pievious waifare, the German cavalry had already fought with the Romans against Persia were about to fight once more with Persia in the time of Antony, but the Egyptian Cleopatra did not allow the war to come out It is said, that it was an ambition of Julius Cæsar to conquer Pcisia, just as Alexander the Great had done before him. Antony, on looking on 15th March 44 B C, to the papers of his uncle Julius Cæsai, found out that his great uncle had that ambition So, he thought of doing what his uncle could not do But Rome was not powerful enough to do that So he, like his uncle Julius Cæsar, counted upon the support of Egypt through its queen Cleopatia for his conquest of Pci sia

The life of Antony, as pictured by many writers, casts a slur, as said above, both upon his and Cleopatra's character—But, about a hundred years ago, M. Lettrone<sup>1</sup> gave another side of the picture and showed both Antony and Cleopatra in a better light. Mr. Gughelmo Ferrero has recently followed him <sup>2</sup> Mr. Arthur E. P. B. Weigall <sup>2</sup> also takes a similar view—All these writers tend to say, that Antony fell into the company of Cleopatra with a view to have her under his control, and to win over her help for Rome in his proposed conquest of Persia—Though Rome was powerful, it had not sufficient money, which Egypt, then ruled over by Cleopatra, could supply—So, both Cæsai, and

 $<sup>^1</sup>$  The Fortnightly Review of April 1909 pp  $\,633\,46\,$  M Lettrone based his explanations on some old coins  $\,$  Ibid  $\,$  p  $\,636\,$ 

<sup>&</sup>lt;sup>2</sup> The Life and Times of Cleopatra, by Arthur Weigall, p 47.

after him Antony had fallen under Cleopatra s power, with a distant view to have her Egypt's help in the conquest of Persia Again Rome being far away he wanted to make Egypt his base for his military operations against Perma. On the other hand, Cleopatra had her object in mind. Though she was the queen of Egypt she knew that she had some enemies at home. Her brother Ptolemy was a rival to the throne of Egypt So, she thought of having these Roman generals, Julius Casar and Antony one after another under her thumb so that in case of difficulty at home she could count upon their help and through them the help of Rome.

Thus both Antony and Cleopatra had at first different objects in mind, in seeking each other's company friendship and love. But in the end, it was Cleopatra who succeeded. She had Antony so much under her control that latterly he lost lumself in the pleasures of her company and of her court and did not push on his idea of conquering Persia. Thus Cleopatra as it were saved Persis from the grasp of Rome and thus indirectly also from the blows of the German cavalry as a part of the Roman army

#### IX.

The Roman Empire had begun to fall. Among the various causes of its fall, one was that of the Third Contury

A.D. The nations. which with the Gormans, weakened the power of the Roman Empire The Goths, the Sa racens or Arabs and the Persiana

invasions of what the Romans called, the Barbarian hordes These hordes or tribes who were all on the frontiers of the Roman territories, menaced the power of Rome. The Roman Empire had sunk deeper mto weakness, in the time of Maxi-

min who usurped the throne after Alexander Severus (A.D. 235) So these confederations, hordes or tribes gained power over Rome casely These tribes were the following -

(1) The German tribes, several of whom were united under the name of (1) the Franks and (B) the Allemani. (2) The Goths. (3) The Saracons or Arabs (4) The Persians.

A. The first tribe was that on the Lower Rhine, from the river Maine (Mayn) downwards—It consisted of the Chatti, the Chauci, the Chewci and others. These were latterly known as the Franks. They invaded the Roman province of Gaul (France)—For years or centuries before, they were, now and then, earrying their inroads—Now, they made stronger efforts and went as far as Spain. They went into the coast towns of the Mediterranean and plundered ships in the harbours.

The second group or confederation of tribes was that on the Upper Rhine and the headwaters of the Danube They were known as Suevi. The Chatti of Tacitus possibly belonged to this group. In the 3rd Century A. D., they and the Bou, Marcomanni and Quadi tribes were all known as Allemani. It is this word that has given us the French name of Germany as 'Allemagne.' They entered into Italy in A. D. 272 and spread desolation.

Now, there came into notice also the Goths, "the most formidable of the barbarians "1 The Goths, and their kindred the Getæ lived on the Lower Danube They appeared there in the place of the ancient Scythians and Sarmatians They crossed the Danube, which then was a weak barrier, and now and then invaded the territories of Rome They crossed the Euxine (Black Sea) and devastated even Asia Minor Crossing the Hellespont, they even went to the Ægean sea and to the coasts of Attica They came into greater notice under their commander and king Alaric (a name meaning all rich) He appeared at the end of the 4th century at the command of the Visigoths He, at first, enriched himself with the wealth of Athens which he had attacked. Stilicho, a general of the Western Empire, opposed him He attacked Rome three times He was twice won over by money grants But at the third time, he took the city in a D 410. In spite of his orders to the contrary, the city was looted by the Goths During his invasion

<sup>&</sup>lt;sup>1</sup> Pr. Merivale's History of Rome, Chap. LXIX (1891), p. 559.

of southern Italy, he died through illness. His men diverted the course of the river Busento to bury him in the bed of the river. They then killed the diggers of his grave lest they divulged the place of his temb. The river was then redirected in its old bed.<sup>3</sup>

The eastern frontiers of the Roman Empire were also threatened at this time by the Saracens or Arabs who harassed even the countries of Palestine and Egypt. The Roman power in these countries and Asia Minor had grown too weak to defend its poor subjects. Among the treasure-finds in these districts the come of this period are found in very large numbers. The reason is the comparatively greater inscountry of the times, when people burned their treasures.

At this time, the Persians also made matters very hot for the Romans. Artaxerxes or Ardeshir Babagan had overthrown the Parthan dynasty and had revived the fallen power of Persia The Persians under him and his sen Shapur became stronger and wrested Arnenia from the hands of the Romans under Alexander Severus. As Dr. Merivale says. It looked for a moment as if the empire of Cyrus would be re-established even to the shores of the Ægean.

#### ٧.

Now what was the principal event which led to the entrance into Germany of a foreign element from Germany of a foreign element with the break up of the man Empire Europe. The Huns have a very long history of their own extending over conturies. The Parses scriptures speak of them as Hunus. They are the Hûnâs of Indian writings. They alternately rose and fell for centuries together According to the Chinese writers in the third century before Christ their dominions formed, as it were a great lampin

<sup>1 &</sup>quot;Leaders and Landmarks in European History 1 y A. R. H. Monerieff and Ray H. J. Chart r (1911) Vol. I p. 150

extending from the Caspinu sex to the frontiers of China, where the Great Wall of China was raised for protection against their frequent inroads

In the first century after thrist, there existed four great kingdoms (1) Chair in the Eist, (2) Rome in the West, (3 and 4) Parthu and India between these two, serving, as it were, as connecting links. The Huns haed within, or at least on the frontiers of all these langdoms and harassed their rulers and subjects. They advanced westwards in the 4th century after Christ. At times they even assisted the Romans against the They occupied the ancient Dacia which is now called Hungary after their name. The name of Hungary pieserves then memory in the West, as Hinza (lit the place of the Huns) does in the East. Their king Rugulas, the mole of Atilla, received in A p 432 an annual subsidy of £350 of gold, i.e., about £ 14,000 from Theodosius II. The Germans and some other Teutonic tribes served under Attila, the king of the Huns On the death of Athla they had a temporary fall, but, after some years, they rose into independence again It was the invasion of these Huns that dispersed the Germans, and it is this dispersion that seems to have been principally referred to by Dr Keith. The result of the invasion of the country of the Germans by the Huns was dispersion and finally absorption into the people of the countries where they wenf.

## XI.

Having had a peep into the past history of the ancient Germans, we will now speak of their constitution, religion, manners and customs. Their kings and generals were elected

Election of generals The ceremony of election by the people Tacitus says "Their kings have not an absolute or unlimited power, and their generals commanded less through the force of authority, than of example If they are daring, adventurous, and conspicuous in action, they procure obedience

7

from the admiration they inspire. <sup>1</sup> What Tacitus means to say is, that their military commanders commanded more by example than by precept. The ceremony of the election, both of the kings and the generals consisted of placing them co-shields and of uplifting them.<sup>2</sup>

### XII

Warfare The images and standards taken from the sacred groves and standards taken from the sacred groves. This seems to be with a view to inspire them with the idea that their gods were as in the battle by their side. The images had the form of wild beasts. This was meant perhaps to encourage them to fight feroclously like wild beasts. It was not the general who punished for any military offence but the priest, because it was believed that the gods, who were present in the battle in the forms of the images suggested to the priests the particular form of punishment.

The wives and children of soldiers all went to the war camp

Women and War

So they were within the sphere of receiving
applause or rebuke for their courage or
want of it from those who were dear to them. Those who
returned wounded in battles were well received by the family
Those who returned unwounded were not much applauded. So
on returning to their homes they showed their wounds to their
family with pride The family members prepared their food
and so they had no camp-followers

At times, when soldiers gave way before the advance of the enemy, it were the women who persuaded or forced them to return to fight. Prisoners taken in warfare were reduced to

<sup>1</sup> Germania Chap. VII

<sup>1</sup> The modern European practice of lifting up popular persons on the occasion of public meetings or demonstrations, and of pulling their carriages, some to have had an origin in some old customs of this blod.

I Tacitus, Germania Chap VII, Ibki

slavery. Thus, in case of defeat, the women also were reduced to slavery. So, to save their family from the horrors of slavery they fought more courageously. Women of noble families were given as hostages. States, which had given such hostages, were expected to be very faithful to their bonds and treaties.

Their army consisted of cavalry and infantry. "Their printiples army and cipal strength on the whole, consists in their their warfare infantry." According to Cæsar, the Germans were divided into tribes. Each tribe was divided into cantons (or gowens) Each canton was divided into several districts or townships (vici). Each of this district or township (vici) was called "the hundred" (die hunderte), because it was supposed to consist of about 100 units.

On the subject of the formation of the army and their warfare, Tacitus says as follows —

"For this purpose (of warfare), a select body is drawn from the whole youth, and placed in the front of the line. The number of these is determined, a hundred from each canton, and they are distinguished at home by a name expressive of this circumstance, so that what at first was only an appellation

# German I an an The Hundred. Nmans (the hundred of which make

- up a uni )
- 2 The Township (vioi). Vi,
- 3. Canton. Zantu
- Tribe Danghu

<sup>1</sup> The German 'vici' is Avesta Viç, (229), Sans चित्र Lat. Vic us, a village We see this word in the names of English counties, like Norwich, Berwick, Warwick, &c The above old German division seems to correspond to the ancient Iranian division of nmana, vic, zantu and dakhyu According to later Pahlavi books, a family forms a house (nmana), 20 houses form a street (vic); 50 houses form a village (zantu); and hundred houses form a tribe district (dakhyu) I think that the German division of a tribe would correspond to an Iranian division as follows:—

Tacitus, Germania Chap. VI Ibid., pp 17-18.

of number becomes thenceforth a title of honour. Their line of battle is disposed in wedges. To give ground provided they rally again, is considered rather as a prudent stratagem than cowardice. They carry off their slain even in dublous fights '? Dr Aikin, on the authority of an old writer thus describes the formation of a wedge. A wedge is a body of infantry narrow in front and widening towards the rear by which disposition they were enabled to break the enemy s ranks as all their weapons were directed to one spot. In the present war we hear of a smillar wedge-like movement on a small front by the Gormans. Thus then even now they are fighting like their ancestors of about 2000 years ago

Tacitus says that the greatest disgrace that can befall them The loss of shield (the solders) is to have abandoned their in a battle, a great shields. A person branded with this ignoming us not permitted to join in their religious rites or outer their assemblies so that many after escaping from battle have put an end to their infamy by the halter '1 According to Dr Alkin it was also considered as the leight of injury to charge a person with this unjustiv "2 A fine of 600 denant (about £0) was imposed upon one who made a false accuration of this kind.

The cavalry had spears and shields for their weapons. The infantry had missile weapons or thunderbotts which they hurled to great distances it seems they were something like our Indian goins (n(m)). They rively used swords or broad lances. The troops were either maked or lightly covered with a mantle. Few had a coat of mail. The shields were ornamented with the choicest colours. This decoration with colours at first denoted valour and then nobility. The later amountal ensigns of chivatrons ages originated from this simple origin. The shields of the chieftains had figures of animals painted on them.

<sup>1</sup> Ibid chap. \1 p. 10

senting the heads of wild beasts—and other usual figures and crowned with a winged crest, to make them appear taller." Their indition uniform consisted of hides of wolves, bears and oven with homs. These it first fughtened the Romans with whom they fought. In their battles with the Romans, when they came neroes rivers they, in order to bridge them, at first threw took-stones in them and then threw trinks of trees over them.

None transacted business, public or private, without being nimed 1. The judges presided in courts duly Constant use of armed 2. The permission of the state to nrm4 bear arms was necessary. The permission was given when the applicant showed his ability to use aims. The ecromony of presenting aims was performed in assemblies, where on the necessary permission being given, either one of the chiefs, or the father or relation of the candidate, equipped the youth with a sheld and javelin. In the case of princes, they received arms not from their assemblies but from foreign states or princes When a prince was not personally honoured thus by being armed by a foreign prince, he was not entitled to dine with royal personages who were thus honoured and armed For this reason, Audoin refused to dine even with his son Alboin, though he was his partner in his victory with the Lombards over the Gepidæ, because the son was not aimed by a king of another country. The arms, thus presented in the public assemblies or by foreign kings, served the purpose, as it were, of togavirilis or the manly gown of the Romans This investiture took place at the age of 12 to 153

<sup>&</sup>lt;sup>1</sup> Ibid Chap XIII

<sup>&</sup>lt;sup>2</sup> All people of German origin considered arms as a part of their official dress. Even up to late, the Swiss peasants attended public assemblies duly armed. We see this custom prevalent in some of our Indian States.

<sup>3 &</sup>quot;This early initiation into the business of arms, gave them that wal like character for which they were so celebrated" According to "Senecoa (Epis 46) a native of Germany brandishes, while yet a boy, his slender

This ceremony of arming made the recipionts, who were up to then only members of the family or household members of the State. In case of youths of high or illustrious families with the ceremonial of arming they received the dignity of chieftenes. It was the ambition of the armed young men known as companions to win the highest favour of their chiefs and it was the ambition of the chiefs to have the largest number, and those the bravest serving under him.

It was disgraceful for the chiefs to be surpassed by others valour in war in valour. It was disgraceful for his men fare. (companions) not to equal their chief. To retire or run away from the battlefield was an irreparable diagrace. When a State was at peace, the young men went to some other State which was involved in war. Thus they always sought war. When not at war they enjoyed a thorough sluggish repose doing no other work. The chiefs maintained, with board and lodging the armed men who served them. We see in this and the accompanying usages the origin of the feudal system which later on was prevalent in England also

Their cold verses or songs, known as barding stimulated their their courage are ofting songs, (bard ling) that noise So they were called bards These songs their relationships and their verses in a tone resemble their verse songs, known as barding stimulated their courage.

bling that noise So they were called bards. These songs exorted their courage for war. With the recital of these verses the people raised a war-ary?

ja viln." He asks: Who are braver than the Germans? Who more impotuous in the charge? Who fooder of arms? Dr Aikin a Translation of the Germania of Tacitus (1823) p 38 n u.

<sup>!</sup> Ibid Chap. XIV

Dr J Alkin the translator of Tacitus, gives an instance, wherain, at the battle of Killierankle Sir Dwen Cameron, the commander of the Highlanders, directed his soldiers to rake a war-cry. The enemy also did the rame. But the ery of the Highlanders being echood by the surrounding hills was looker. So, it was pointed out to soldiers, that the fact of their ricks being looker was a good omen of victory. D. D. to.

## XIII

We have alluded above, while referring to the question of the

The Civil Eco nomy or the Civil Constitution of ancient Germany formation of the army, to the divisions of the German people for the purpose of supplying soldiers The same division was observed in the matter of civil administration. The

people were divided into nations or tribes, some of which were ruled by *lings* and some had a republican form of government by *chiefs*. Whether kingdoms or republics, their inflitary affairs were ruled by generals. The nations were divided into cantons, each presided over by a count or chief. The cantons were divided into hundreds or districts, which were so called, because they contained a hundred villages or townships. Each hundred was ruled by a companion or centenary, chosen by the people. The companions or centenaries tried small causes, and the counts, both great and small causes. The courts of justice were held in open under oaks, elms or some other large trees.

Their manner

Assembles of the Elders and Assem blies of the wholo community

J

of transacting communal business requires our special attention, as it is compared with the Indian institution of the Village Councils of Village-Panchayets Tacitus says 2 "On affairs of smaller moment, the chiefs

consult on those of greater importance the whole community, yet with this circumstance, that what is referred to the decision of the people, is first maturely discussed by the chiefs <sup>3</sup>...

 $_{-}$  <sup>1</sup> Cf The Persian custom introduced by the Moguls in India, whereby the military commanders were spoken of as "the thousand," "the five thousand" &e, according to the number of soldiers under their commands

<sup>&</sup>lt;sup>2</sup> Chap XI <sup>3</sup> What is said here, reminds a Paisee of his own communal meetings, even in Bombay, up to about 50 or 60 years ago, when the elders met, discussed and settled petty communal affairs and called the meetings of the whole community for larger affairs. These meetings were spoken of as 'Anjuman' and 'nani molitie (i c small and great) Anjuman or 'Samast (i e the whole) Anjuman' respectively.

An inconvenience produced by their liberty is that they do not all assemble at a stated time as if it were in obedience to a command but two or three days are lost in the delays of convening When the number appears sufficient they sit down armed. Silence is proclaimed by the priests 1 who have on this occasion a coercive power. Then the king or chief with such as are conspicuous for age birth military renown or eloquence are heard and gain attention rather from their shility to persuade than their authority to command." If a proposal displease the assembly reject it by an inarticulate murmur if it prove agreeable they clash their laveling for the most honour able expression of assent among them is the sound of arms.

When they met in assemblies they met duly armed in open places. The stone-henges or heaps of stones Place and time of meetings. now found in various places are supposed to be the meeting places of the ancient people.

As to the days of meetings Tacatus says They assemble unless upon some sudden emergency upon stated days either at the new or full moon, which they account the most ausnicious season for beginning any enterprise.\*

The Townships of the ancient Garmans and the Village communities India. Their ways of transacting com munal business.

We said above that the Townships spoken of as vice among the ancient Germans corresponded to the vic of the Iranians and dilite, a village of the Indiana Similarly the old German ways of conducting the communal affairs in the vice remmbles to a certain extent the Indian

ways of conducting them in the visk or village of India as seen

<sup>!</sup> In the Anjuman meetings convened in the old conventional manner at old Parseo centres like Naosari, the prest still plays a prominent part. It is the priest (414 ray) who goes round in the town to announce the meetings, and it is he who arranges all the affairs at the meeting.

t The ancient Persians prayed to be blessed with sons, who by their wisdom, should take an active part in the deliberations of their communal (Anjuman) meetings.

<sup>3</sup> Cf Plinys Natural History Bk. II, chap. 90 (The Power of the Moon over the land and the sea) on the supposed influence of the moon upon world a affairs. (Bostock and Rileys Translation Vol. I pp. 132-9). Here the Moon is specient of as The Star of our life."

even now Compare with the above picture from Tacitus, the following picture, presented by Sir Herbert Risley, as to how the communal business is transacted now in Indian villages by the Village Panchayets "The method by which the Panchayet is elected cannot be expressed in terms of European political phiaseology. The people get together and they talk, and eventually an opinion emerges from their talk which is the opinion of all of them. There is no majority, for they are unanimous, there is no minority for the minority has been talked over and casts in its lot with the majority. The process can only be described as selection by acclamation, in the way the earliest Greek and German popular bodies were selected, the oldest mode of election in the world." What Sir H. Risley says of election and selection applies also to the transaction of other communal business

The old German or Teuton Townships resemble Indian village communities also in the matter of common German The Township and the kinship and common ownership of land and Village Indian other communal interests Sir Henry S Their common ownership. Mame thus speaks on the subject -"The Village-Community of India exhibits resemblances to the Teutonic Township 2 which are much too strong and numerous to be accidental, where it differs from the Township, the difference may be at least plausibly explained. It has the same double aspect of a group of families united by the assumption of common kinship, and of a company of persons exercising joint ownership over land. The domain which it

<sup>&</sup>lt;sup>1</sup> Speech, Bengal Legislative Council, July 23rd, 1892, quoted by Mr John Matthai, in his "Village Government in British India," pp 30 31

<sup>2 &</sup>quot;The township was an organized, self-acting group of Teutonic families, exercising a common proprietorship over a definite tract of land, its Mark, cultivating its domain on a common system, and sustaining itself by the produce. It is described by Tacitus in the 'Germany' as the 'vicus', it is well known to have been the proprietary and even the political unit of the earliest English society" (Sir Henry S. Maine's "Village-Communities in the East and Wests," 6th ed. (1890), p. 10).

Mr Sidney Webb the Professor of Public Administration in

Prof. Webb on such local organisation elsewhere the University of London in his interesting Preface to Mr John Matthan above book, tells us, that there is something like these local organizations of ancient times, even

now in England He says Underlying these august dignituries (the Commissioners of Severs) however the careful observer may discover in one county after another still existing, fragments of another and an older load organization against floodings, unknown to the statutory constitution and never yet described in any book, in the form of juries of local residents who make their own rules, exercise their own primitive watch and ward of the embankments and dykes, carry out the minor precautionary measures that they themselves devise and stand in a curious and ever varying relationship, unprovided for by statute to the official Commissioners who naively regard themselves as the sole Local Authorities

In the matter of the punishment of offenders who in the Forms of Punish case of some principal offences were judged by the whole assemblies or national councils the principle kept in view was that villainy should be exposed while it is punished, but turpitude concealed. Thus traiton and desertors were hung openly upon trees so as to be seen by all for some time but cowards dastards and persons guilty of unnatural practices were sufficiently in the case of smaller crimes the chiefs of the cantons and districts administered justice with the assistance and advice of the hundred companions chosen by the peoples of the cantons.

Fines were imposed in kind e.g. in horses and cattle. A part of the fine went to the king or state and a part to the injured party or his relations.

I Tacitus, Germania Ibid chap. XII

## XIV

They did not live together forming large cities or settlements but separately on meadows and in groves near springs and rivers. All houses had large compounds smrounding them. They did not use mortar and tiles in their buildings but simply timber which were thatched and plastered with mud. They had many subterraneous caves which served as winter-residences and granaries as well as retreats when the country was suddenly invaded by enemies.

Then common dress was a Sagum fastened by a clasp of a thorn. This clothing covered only a part of the body which otherwise was naked. They clothed themselves with skins of beasts which were variegated with spots and strips of furs of marine animals. Women also were similarly dressed but they had frequently some linen for their dress. They left their whole arms and a part of the breast uncovered and exposed.

The matrimonial bond was strict. They had monogamy as a rule Polygamy was rare, and indulged in by Marriage a few wealthy, not for incontinence or lust, but 1ather as a mark of rank and position It was the husband who paid dowry to the wife, and that dowry consisted generally, not of ornaments, diess or decorations, but of things as could be of use in waifare, such as oxen, caparisoned horses, shields, spears and swords The wife's presents to the husband also consisted of aims which were considered as "the firmest bond of union" The women also were expected to be brave and warlike Hence it was that the husband's gifts consisted of In the marriage admonitions she was advised to be "a partner in toils and dangers ' She was to pieserve her mairiage dowly and pass it on "inviolate and honoured to her childien "

The women lived in a state of well-guarded chastity. They women schartity and not loiter in public entertainments. They had nothing like love-letters. Adultery was rare and was punished immediately by death by the husband if discovered by hunself. The adulterer also was similarly punished. In doubtful cases or at choice the husband at times cut off the hair of the wife and dismissed her from his house pursuing her with atripes through the village. The woman thus disgraced could never marry again.

Widow marriage was not practised. They took one husband as one body and one life. Some even became suttess and burnt them-elves on the funeral pyres of their husbands.

They believed that women possessed some sanctity and Regard for their presonne So they always sought their women oursel. The women performed divinations and advised as to the auspicious time when the should go towar. Some oid grey-haired women in white dress at times accompanied the armios as prophetesses. Some of these at times butchered some prisoners of war and from their entrails presaged victory or defeat. Some of these women were honoured as detires.

hammer which always retires to him—(c) The third god Freyga gives his name to Freetag or Finday—(d) The fourth god is Hertha, presiding over—earth—(c) Hukhi or Bertha or Horsel presided over children and the Moon

Merenix was then principal god. At first in the time of Casar, the Sun, Moon and Vulcan or Fire were their principal gods. But, latedy in the time of lactus their contact with the Gauls led them to adore Merenix us the principal god, and Mars, Hercules and Neptune as lesser gods. Merenix was the patron of arts trade money and merchandise. They even offered lannar victims to him. To Mars, Hercules and others they offered only animal sacrifices. As the Germans were believed by some to be of Scythian origin, they were believed to have taken their custom of human sacrifices from their Scythian ancestors.

The worship of even some Egyptian deities like the Isis was adopted. Isis which was known as Clathra was worshipped in the figure of a galley. The ancient Germans, who have on the banks of rivers like the Elbe and the Danibe easily adopted the worship of Isis, the Egyptian god of the Nile, in the figure of a galley, as they did not like the idea of gods being represented in human forms. They did not even like the idea of gods being worshipped in enclosed buildings. So, woods and groves were their places of worship. It is latterly, that they built temples for worship and statues for some of their gods.

They took omens from several things—(a) Twigs of fruitDivining by omens and lota trees which were cut into small pieces and marked, were thrown on a white garment and pieked up at random. The different marks gave particular omen. They also took omens (b) from the notes and flights of birds and (c) from horses.

Di Aikin, the translator of Tacitus, refers, on the authority of Herodotus, to a similar practice among the ancient Persians (a) Some horses were sacred in the army of Cyrus (b) Darius got his throne by the

untouched by earthly labour were pastured at the public expenses in the sacred woods and groves. They also took omens (d) from war prisoners who were made to fight single-handed with their own champions. According as the victory falls, they presses success to one or the other party

They recked time, not by days but by nights eq instead Days began with of saying such and such work lasted for night.

So many days they would say it lasted for so many nights. This seems to be an old method among many Aryan nations. The ancient Iranians also counted their days by nights. For examples they spoke of the Franshis of the deed coming to this world for 10 nights (daga pairi khshsfna), and of the period of the Barashnums is cremonal baths and retreats, as those of 0 nights (sam khshapam). The ancient Hebrews did the same

The early Christians followed the Hebrews in this Our English word fortnight (fourteen nights) for a period of 14 days points to this old custom

In India, even now the common expression is rdi dùldo and the ancient expression was ratri-divasa a.e. night and day 2

## THE ANCIENT IRANIAN BELIEF AND FOLKLORE ABOUT THE MOON SOME COGNATE BELIEFS AMONG OTHER NATIONS

(Read on 28th February 1917)

7

We read as follows in The Hand book of Folklore! records of prehistoric archieology teach us Introduction that man's early progress over the world must have been very slow. At first unarmed and unclad, and subsequently but very madequately armed and clad he prohably wandered along the banks of rivors surrounded by hills and mountains by dense jungles by fleroe and often gigantin animals. He was exposed to heat and cold to aind and wenther to storm and tempert. Forces outside himself and beyond his control caused him pain or pleasure obliged him to move hither or thither for safety shelter or sustemance I ittle wonder then that he should attribute a mysterious life and power not only to the heavenly bodies the winds, the streams or the waves but even to allent motionless unchanging objects such as mountains crags boulders and publics nav further that he should think of them as being endowed with will and consciousness or that finally he should suppose them to be the abodes or manifestations of beings more powerful than hunself. That such beliefs were actually bold is amply proved by the myths current among primitive and barbarous races Traces of similar sleas may also be found in the folklore of civilized Europe even down to the present day

The above is the general reason attributed by anthropologi to the rise of some folklore about some grand objects of Nature

The Haisl book of Folklore" new edition reased and culinged by Charlotte Sord in Burns (1914) p. 23

ask "If the ancient primitive man 'attributed a mysterious life and power' to the whole Nature, and if you have doubts about the propriety of that attribution, to whom do you attribute Life and Power?" You will perhaps reply "To God and to God alone" Then one may question again "What is your idea of God? Where is your God? You will reply "God is Solf-existent, He is Omnipotent, Omniscient Omnipresent One may ask then "If He is Ommpresent, He is an Existence that must manifest Himself somehow anywhere He, or His Essence, or part and parcel of His Essence or what you have called His 'Life and Power' must be found in Nature, in the objects of Nature referred to m the above passage" These questions and answers bring us to the general questions, "What is the procedure? From Nature to Nature's God or From Nature's God to Nature'? To ordinary human intelligence, "From Nature to Nature s God is a more easy, more intelligible, more comprehensible view Questions like these bring us to questions of Monotheism and Pantheism These words need not be in apposition A Monotheistic-Pantheism, or a Pantheistic-Monotheism, is possible or intelligible But these thoughts lead us to abstract questions of Religion, in which we will not enter here From Diversity to Unity may be the guiding principle Whichever way you think of the questions, this much can be said to be true, that in beliefs of the above kind man sees some Force, Life or Power in objects of Nature The higher and nobler the object of Nature m which he sees it, the better That is the way which leads to his mental growth

From all these considerations, we see, that it is quite natural that the moon, being one of the grandest objects of Nature, is looked upon by men of all ages as an object, repository of some Power or Life or Energy, which it is in her power to transfer to others. It is some framen belief and folklore about this grand object of Nature that forms the subject of my paper this evening.

I will at first speak of the belief and folklore about the moon among the ancient Iranians and then speak a little of some cognate beliefs among other nations

## н

## THE BELIEF AND FOLKLORE OF THE ANCIENT TRANSANS

Of all the grand objects of Nature, which are mainfestations The Moon—an of God's power the Sun and Moon are held to occupy a high position. They are as it were, the "eyes of God" God sees His Nature as it were, the him In the Avesta the Sun and the Moon are referred to as the eyes of God Nemô Ahurâi Mazdâi nemô âhyô doithrahyô yâ Ahurahê Mazdâo (Yasna La.VIII 22 Khorshed Nyâish, 5) : c. We do homage to Ahura Mazda "One may understand this passage in another way and say that the Sun and Moon are the "Eves of God because man sees God as it were through thom?

Eteme Apollo I that thy slater fair Is of all these gentlier mightiest."

sister to a brother

<sup>&</sup>lt;sup>1</sup> Yasma I. 11 also speaks of the Sun as the eye of God. The Rigyrds speaks of the Sun as being born from the eye of the Purusles, the mystic male, and of the Moon as being born from his thought Darmesteter a Studes Iranionucs II p. 301.)

Pope sings of the Moon as "The Refulgent Lamp of Night"
As when the moon refulgent lamp of night
O er heavon's clear asture spreads her secred light
The conscious swains' rejoicing in the sight
Lye the blue waut and bless the useful light.
Another English poet heats associates Moon with the Sun as A

<sup>&</sup>quot;By the feud Twixt Nothing and Crest on I here sweer

In the Mâh Bokhtâi Yasht and Nyâish in piaise and honour of the Moon, we find the following form of the homage paid to Moon, beginning with that to the Creator —

"Homage to Ahua Mazda (The Ommseient Lord)! Homage to the Amesha-Spentas (The Immortal Beneficent Beings)! Homage to the Moon who contains the seed of the animal election! Homage to (thy power of) looking over us! Homage to (our capability of) looking up to you!

This form of homage seems to be connected with the above idea of the Moon being, as it were, an eye of God, an eye through which He sees His creation and fertilizes it. The passage is significant as giving us an insight into the old Transan view about the Moon

Firstly, we see, that the first and the principal homage is to Ahura Mazda, to God The second homage is to the Divine Powers or Existences who are the creation of God and who preside over or personify His attributes. Then the third homage is to the Moon, who is believed to have in him the Power, the Force or the Energy of fructifying the eattle.

We have two compositions or prayers in the Avesta in honour and praise of Maongha or Mah i.e The Avesta Be the Moon These are the Mah Yasht (Yt lief about the In fluence of the VII ) and the Mah Nyaish They are well-Moon upon Crea nigh the same with a few modifications of tion changes in the iceitals of the usual parts in the beginning and The component parts of the prayers are the at the end The usual short invocation of God in the beginning with a short recital in piaise of Righteousness The usual short prayer of repentance These two precede all Avesta prayers of the Parsees 3 The Homage to the Moon, beginning with Homage to God 4 The usual short recital, invoking the Powers of Intelligences associated with the particular Gah or period of the day in which the prayer is recited

procedes generally all Avesta prayers 5 A short recital about the movements of the moon, referring to its waxing for 15 days and waning for fifteen days 6 A short recital in her praise wherein it is said that she has to look to other powers or mediums or objects for the spread of its light on the Earth 7 A reference to its influence upon vegetation 8 A short invocation, wherein its influence on water (afwanghuhantem) on vegetation (zaurinyāwantem) and on the wealth (ishtirantem) and health (bassazem) of man is referred to The cattle formed the principal part of wealth 9 A prayer asking from the Higher Powers the blessings of courage success wealth children. &c.

These Avesta prayers especially point to some connection between the Moon and the growth of the vegetable creation. They also refer to the influence upon cattle and the health and wealth of men.

The Pahlavi and Persian writings amplify the references in the Avesta to the influence of the Moon The principal writings are the following — 1 The Pahlavi rendering and communitary of the Avesta Mah Nyash and Yasht 3 The Dadastan s Dinik 4 The Persian Sad-dar 5 The Leasan versions of the Avesta and Pahlavi Nyash and Yasht

In the Avesta Naish and Naish in honour of the Moon and in the Lahlavi and Persian renderings, we see clear references to Moon's influence upon —

- 1 Vegetation,
- 2 Cattle or animal creation and
- 3 Mankind.

We will examine the subject of this laftuence a little in detail

The Avesta points clearly to some connection between the

Moon and the growth of the vegetable creation on the Vegetion. We read (Wah Nyaish, Aat yat tible Creation. Maonghahe raokhshini tapayêrti, mishti urvaranam zani-gaonanam zaramaêm parti zemât nzukhshayêrti). "When the light of the Moon shines, there shoot forth on earth green coloured plants like dew."

The Pahlavi rendering is more explicit on the point of the influence on vegetation. (The Pahlavi Khordoh Avesta by Kavasji Xussermanji Kanga, पाइ भार देह अवस्ता, तेनी पेंढेलवा भार्भेनी मुधा (1859) p. 44. Etudes Tramennes, par James Darmesteter (1883). Tome II. p. 294)

Translation —At the time when the Moon shines brightly, the trees always get their groundss, that is moisture. In the spring they shoot forth on the ground

The Persian rendering runs thus (Etudes Iraniennes, *Ibid*, p. 296)

آن رمان که مای روشی قاده بهدشه دار و درخت سدو رنگ درمان دیار در رمین قادید

Translation —When the Moon shines brightly, plants and trees always (become) green-coloured. In the time of spring they grow out on the ground

The Moon is said to be Gao-chithia, i.e. possessing the seed of Gâo (cow) i.e. the cattle. Here, Gâo 2 Influence of Moon on the cattle on Animal creation only of the bovine kind, but of all animals. There are several Higher Powers or Higher

<sup>1</sup> Compare with this, the beliefs of other ancient nations as described by Sir J. Frazer (Golden Bough V Spirits of the Corn, Vol. II)

Intelligences that are said to be co-operating with the Moon in some of her influences, especially that on the cattle Thru are spoken of as its Ham kirs i.e. on workers

According to the Parsee books the seven Ameshaspands or

The Hambles or Co-workers with kers ( ) or ) i.e. oo workers with them The Mangha on the Mohor Yazata, te tho

divine power presiding over the Moon is a co-worker with Volumana or Bahman. The Hamlvirs who form this group are Bahman, Mohor Gosh, and Rum Of these Bahman presides over Good Mind Mohorover the Moon herself Gosh over cuttle and Ram over good pastures. The first three are apoken of as Gao-chithra is possessing the seed of the Gao (cow) or the hill

Translation—The cattle-seeded are three, i.e. Bahman Mah (Moon) and Goshoran all these three are cattle-seeded

The Persian rendering of this Palilavi commentary runs thus

t. Bahman Mah (Moon) and Gosh every one of these three is cattle-seeded

In this group of three the Moon as it were, stands in the middle between the Spiritual world and the Corporeal world. She is in the intermediate Heavenly world between the intangible invisible world and the tangible visible world. Her position is thus defined in the Pahlavi commentary of the Mah Nasht.

Kavasji Numerwanji Kangas text of the Pallavi Khordeli Avesta (1859), p. 41-1-13.

s Sindes Iraniannes, Tome second par James Darmesteler, p. "9

مرود کا املی جمادر سامه و انظامی ها املاده را به محمد داید ماسود ا به محمد داید ماسود الله الماره الماسود ا

Translation.—He who is Vohuman (Bahman) is spiritual He is invisible and intangible, and from Vohuman is created Mâh (the Moon) with visibility and intangibility, and from Mâh (the Moon) is created Gôshôrûn (the cattle) with visibility and taugibility

The Persian rendering of the Pahlavi commentary of this passage runs thus

د بهدن عیدی که دیده نشود و گرفته نسود و اربهدن همالا را بیده کرده ا است که دیده شود و گرفته نشود و ارهالا گو سعده پیده کردلا است که دیده شود و گرفته بهم شود

Translation.—Bahman is spiritual, who cannot be seen and cannot be got hold of The Moon is created from Bahman (Good Thought) <sup>3</sup> He is seen but cannot be got hold of, and from the Moon are created the cattle who are seen and also caught hold of

It is then added that the work of the creation depends upon the moon We read

Translation — The process of the creation of this world (proceeds) from (these three) cattle-seeded (powers) and the splen-

<sup>1</sup> K N Kanga's text of the Khordeh Avesta, p 41

<sup>&</sup>lt;sup>2</sup> Ltudes Iranionnes II, p 295

Indian books speak of the Moon as being born from the thought of the Purusha, the mystic male

<sup>4</sup> K. N Kanga's text, pp 41-42,

dour (: e excellent continuity) of the bovine class and the seed of the cattle are based (: c. are dependent) upon the Moon.

The Persian rendering says

Translation — The carrying ou of the whole of the work of this world proceeds from the cattle-seeded powers and the splendour and the purity of (the breed of) the cow and tho cattle are dependent upon the Moon

The above ancient Iranian view about the Moon which we gather from the Pahlavi translators and commentators of the Avesta texts when summed up in brief is this Voluman or Bahman, i.e. the Good Mind who is the first of the Amesha spands or the Immortal Powers of Ahura Mazda and who him self is a creation of Ahura Mazda (Volumana mana dâmi Zarathushtra. Yasht I 25) is the source from which the creation of the Moon proceeded. In other words God out of his good mind created the Moon and made her a procreating source of animal creation i.e. the Moon has an influence upon animal creation ospecially upon the cattle.

The above idea that God created the Moon through his Good Mind or Wisdom is represented in the Ahura Marda Yasht where we find Ahura Marda saying to Zerosster — The World has been (running) from the beginning through my knowledge through my Wisdom. In the same way the world will continue up to the end — We saw above that together with the Sun, the Moon is spoken of as an eye of Ahura Marda — Sight and knowledge to a certain extent go together — What you see with your eyes imparts to you some knowledge — The very root of the Indian and Iranian words for learning  $r_{t-r}$  vidily å

בונשנקניוע או Sans Frant) giver us an idea of both sight

f udes frantognes, H p. 0 Yaşlık I \*8

and knowledge. The root is Vid Fat Lat. idere to see, to know. That the Moon proceeds from the Good Mind or Thought of the Highest Intelligence is also an Indian view.

The Parsee month is divided among thirty days, each of

Days of Abstraces from flesh among the Parsees on the four Hamk a days of Mohor, presiding over the Moon

which bears the name of one of the thirty Yazatas or angels. Out of these thirty, four, viz the 2nd, 12th, 14th and 21st bear the names of the above group of four hamkars or co-workers, viz. Bahman, Mohor,

Gosh and Râm So, owing to the above belief, that the four co-workers among the Higher Powers, have some connection with the creation of the cattle, many Parsees, at one time, abstained from eating meat on the four days bearing the names of the above four yazatas. At one time, this question of abstinence from meat was a subject of great controversy and even of acute differences among the laymen (Behdin) class and some of the puestly (Athornan) class of the Paisees. We learn from the Parsee Prakash of the late Khan Bahadur B B Patel<sup>2</sup>, that on 30th May, 1796, the Parsee Community of Bombay met in a general assembly and solemnly resolved that all Parsees should abstain from meat on these four days. This resolution was again affirmed by the members of the Parsee Panehayet in 1823 Exceptions were permitted in ease of illness Some members of the priestly class were opposed to very rigid rules in this matter. These customs and resolutions are now-a-days more honoured in their breach than in their However, some abstain even now, from meat observance on the above four days every month Some abstam only on the above four days during the 11th month of the year which is dedicated to Vôhûman or Bahman, the first of the four hamkars of Mohor or the Moon Many abstained formerly, and some abstain, even now, from meat diet during the whole of this 11th month dedicated to Bahman.

<sup>1</sup> Ormazd et Ahriman, par Daimestetti (1871), p 74, n 3

<sup>&</sup>lt;sup>2</sup> Vol I, pp. 877-78

the influence of the moon. As to how the Moon exerts that influence and how she brings about a benefit or otherwise it is an academical question to be left to philosophers and divines

One must not understand from the above that the ancient Iranians believed in destiny and not upon self-exertion. No on the other hand, action exertion industry activity were highly enjoined. But, when in spite of all these there came failure or disappointment, one need not despair but have his trust in God. Destiny or takdir was associated with trust in God with the belief that it was God's Will, and that 'God's Will be done. The Moon was allegorically as it were the eye of God, and was therefore the medium through which, that Will or Destiny was bestowed.

<sup>1</sup> This Iranian view is, to a certain extent, also the Hundu view. It is well expressed by Mr S M. Mitra. He says: It is not given to human beings to understand the whole working of the various forces that play upon the individual. Some Great Power may look down with comprehending eye upon each detail of the complex machinery and sec how far a man could roust the sald forces and attract the good, but it is very hard, nay impossible for man himself to say how far he is bound down by the laws of heredity and by environment or how far ! is at liberty to exercise freedom of will. An absolute belief in an unalterable Fate would be slavery but most people hold the view that man can modify his late even if he cannot altogether control it Man is born with a certain heritage of power and weakness from his ancestors, but most men do not make the best of what is in them, profering to blame fate or ill luck or whatever name they may give to the combination of circumstances which they think are against them Hindu Mind Training by S M. Mitra (1917) pp. 187 88. We learn from this that the Hindu view a" a certain behef in Free Will as well as in Fate." (Ibid. p. 337) Fate will lead on through one a misfortunes provided one feels responsibility and does all in one a power to right the wrong under which one suffers (p. 359) Mr M tra compares this Hindu view with what was said I y the French philosopher La Rochefort cauld who said: "It seems that nature has at man a birth fived the bounds of his virtues and vices." (Maxim. 180) There is no praise we have not lavished upon l'rudence and yet alm cannot arsum to u the most trifling event (Maxim 6"). Our wisdom is no less at the mercy of Fortune than our goods" (Maxim, 323) " littoud men flatter themselves with their great actions, they are not so often the result of a great design as of chance." (Maxim 37) (Ibid pp wlw-16) Mr Mitra

We saw above, that the Moon is spoken of in old Parsee books

Moon's Influence upon Conception by the gâo, i.e., cow or cattle. The word gâo or cow may be taken in a much broader sense, as representing all animal creation, including, among animals, mankind also. We saw, that according to the Pahlavi Dâdistân-i Dinik, the gift of children was in the hand of Destiny and that the moon had something to do with destiny. The Pahlavi Dinkard gives us some glimpse into the belief which connects the moon with the conception of women or with birth. We read as follows in the seventh book.

- 1 "About the marvellousness of the manifestations before the birth of that most auspicious of offsprings from his mother.
- 2 "One marvel is this which is declared, that the Creator passed on that glory of Zaratûsht through the material existences of the creatures to Zaratûsht, when the command arose from Aûharmazd, the coming of that glory from the spiritual existence to the worldly, and to the material substance (mâdiyâto) of Zaratûsht, is manifested as a great wonder to the multitude (val kabedânô) 3 Just as revelation mentions it thus 'Thereupon, when Aûharmazd had produced the material (dahishno) of Zaratûsht, the glory then, in the presence of Aûharmazd fled on towards the material of Zaratûsht, on to that germ, from that germ it fled on, on to the light which is endless, from the light which is endless it fled on, on to the moon, from that moon it fled on, on to those stars, from those stars it fled on, on to the fire which was in the house of Zoish,

thus explains further the Hindu idea on the authority of the words of Bhishma "Destiny and exertion are inter-dependent. The unhappy man of inaction is ever weighed down by all kinds of misfortune" (Santi Parva, CIII 19,20). Without swift exertion destiny alone never succeeds in attaining the ends which kings desire. Exertion and destiny hold equal sway. Of the two, I hold exertion to be superior, since, destiny is already fixed as the result of previous exertion (Ibid, LVI 14,15). Ibid, p. 516.

and from that fire it fled on on to the wife of Frühimrvank Zois when she brought forth that girl who became the mother of Zaratusht 1

From this passage, we see that the germ of a child is in some way connected with the moon. Various Iranian words also point to that connection. The Avests word for the Moon is manningh Pahlavi man and Persian, man. The Avesta word for wealth also is maya ( ) Persian mayeh also have the second of the connection of the

The same Pahlavi word man aignifies mean as well as sexual intercourse. The same Persian word A. which signifies wealth also signifies semen virile as well as female or woman

בתר וב ונפחה ר לב מש חור משתח הרליוח ו ש שמוחת שביב המוחת ומלחה ו הקור צוחה של בצוח ו ש אוחת שביב המשחת מלחה אחד הרצישות ש האל וצי התר אש השחת לרוך ו לוחל של בנינוח ו אי

Translation—During 15 days they receive from the men of the world good deeds and righteoniness and from the heavenly beings recompense and reward of virtue. When the victorious Moon waxes from the first day to the fifteenth day the heavenly beings secept virtue and goodness and from the fifteenth day to the end of the thirtieth day, they distribute (the reward) to the men of the world

<sup>1</sup> D nkard BL. VII ch p II 13 R. B. E. Vol. VLN II pp 17 15

The Persian version of this Pahlavi passage runs thus (Etudes Iraniennes) par Darmesteter II, p. 206).—

پانزه ۱ ما ۱ افزایه و پانره کاره پانره روز کار و کوم ۱ دعهان داشده کارو آدول کند و مود آدههان را و پانزه رود کار و کوم شهاروا در بهشت سپاره و مود آدههان این حهان اشده کارو در اینتهان دشته

Translation —t The Moon) waxes for 15 (days) and wanes for 15. During (the first) 15 days, He accepts the good deeds and the virtuous deeds of the dwellers of this world for recompense in that world, and during (the next) 15 days, He entrusts the good deeds and virtuous deeds of this world to Paradise and grants the recompense of that world to the inmates of the world in this world.

The idea sought to be conveyed in the above Pahlavi and Persian passages is this. There is, as it were, some mutual work between the Spiritual Beings and the worldly beings. Man's good works are registered in Heaven by the Spiritual Beings in one Lunar fortinght and rewarded in another! Darmesteter says, that "the moon is thus a sort of moral clearing-house between earth and beaven."

In the Pazend portion which precedes the Avesta Mah Nyaish, the Moon is spoken of as Mah Bukhtar (Mah bukhtar, mah Yazad be-resad). The Mah Nyaish is spoken of as the Mah bukhtar

Nyâish (ננשים) אייה שישה). Here the word bukhtâr may have two significations: (1) One that of the distributor of material blessings. In that case, the word is Avesta איים שישה (Yt VIII, 1) distributor, Pahlavi bakhtâr שישים ו e, the giver or distributor of bakht (P בשי) e, fate or destiny

According to the Hindu behef also the waxing and the waning of the Moon have certain influences on men's temperaments (Hindu Mind Training, by S. M. Mitra, p. 13)

<sup>&</sup>lt;sup>2</sup> S B. E Vol XXIII, p 89, No 4 Mah Yasht,

The waxing and waning of the Moon was believed to stars affected by affect even the luminosity of the four time Waning and Waning of the Moon.

(Shaedaan) stars who are planets have their light (also diminishing) ie, the stars like Haftorang, Tishtar, Vanant and Satvar become more powerful in their work (ie, the light)

The Persian version runs thus (Etudes Iraniennes par Darmesteter II, p. 296) —

کم او افرویی ماده یعنی ماه ایشان در کاستن دماده کم مقادل اواختران کم ددستارگان بست چون بعتورنک و وانت ستاره ستوس و تشتر وعیره یعنی در آسمان بستنده ادادی روز اده و چون دکامه یعنی ماه ایشان در افزونی داشده کم مقادل او اخترانست یعنی دم دیگی روز مدد داشده

Translation — When the Moon is waxing, they, viz, Haftorang and Vanant stai and Satvas and Tishtai and others, who are opposed to the Avâkhtaiân (ie, the planets) that are bad stars, wane ie, those who are in the Heavens become powerless. When the Moon is waning, they (ie) the stars who are opposed to the Avâkhtarân (planets), wax, ie, become powerful in goodness

The Sad dar Reverence to the ent Iranians held them in reverence The Persian Sad-dar (The sixth Dar or chapter) enjoined for a good Zoroastiian the following six ceremonial rituals of which two were in connection with the Sun and the Moon He should celebrate (1) the Gâhambârs, ie, the six season festivals (2) The Faivardiân, ie, the ten days at the end of the year to be passed in prayers, both for one's self and for the departed ones (3) The commemoration of the anniversailes of the death of one's parents and dear ones (4) The

<sup>&</sup>lt;sup>1</sup> We learn on the authority of Manander Protector, that Naoshirwiln (Chosroes I) postponed in A D 585, the formal welcome to his Court of the ambassador of Emperor Justin of Rome (Vide my paper, "An Inquiry from Pahlavi, Pazend, Persian and other Works on the subject of the Number of Days of the Fravardegán" (1908), pp. 41-42)

receital of Khorshed Nyaish in praise and honour of the Sun three times during the day—morning noon and afternoon (5). The receital of the Mah Nyaish in praise and honour of the Moon three times during a month and (6) the celebration of the Rapithavin s.e. the featival to celebrate the passing away of Winter and the approach of Summer <sup>1</sup>

The Sad-dar i Behr 1 Tavil gives the following as the three days for the duty of reciting the Nyanh or Litany in honour of the Moon (1) The New Moon day (2) the fourteenth day se, the day preceding the Full Moon day and the first day of the next dark fortught.

Some mysterious life and power being attributed to the Moon as a grand object of Nature and as the medium of the distribution of God's bleesings there areas naturally the idea of reverencing it. The Shayast-la Shayast speaks of the act of reverencing the moon as a good work (S B E. Vol V p X 298 Chap VII, 4) Not to revere it at proper times was a wrongful emission (libid p 352 Chap XII 31)

The Moon being thus hold as a Heavenly body which exerts some influence upon Man's life the idea of offering it something naturally followed We learn from the Shâyast-la Shâyast (SBEV p 336 Chap XI) that, when a sheep or goat was offered as a sacrifice by some, the right eye of the animal was the share of the moon \* The eye was offered because the moon was, as said above spoken of as an eye of God The Parsees have now no animal offering of the above kind But the custom of reverencing the Moon is still prevalent

<sup>8</sup> B E. Vol. XXIV p. 264

<sup>1</sup> ide Dastur Jamaspji a Sud-dar in Gujarati p. 84

<sup>3</sup> This reference to the off ring of a part of a sie-ep in honour of the moon among the Perrians reminds us of the custum of the ancient Egyptians who secrificed pigs to the moon. (The Golden Bond) of Sir J. Frazer. Part. V. Spirits of the Corn and of the Widd Vol. 11 to "5).

It being held as above, that the Moon had an influence upon man that if had, as it were, an influence as

New Moon day amon, the Pat ces c medium, in bestowing God's blessings upon Man, the New Moon day was an anspicious

day. If a Bombayite has a doubt, if a particular day is a new moon day, he has only to go to the sen-shore at the Back-bay, and if he sees there a larger concourse of Parsee ladies in their saices of variegated colours, he has to assure himself that it is a New Moon day. He will find some of them giving their offerings of flowers and sugar and sometimes of a cocoainit to the sea and thus paying an homage to Ardvieura Anahita, the female Yazata or angel who presides over waters. This Yazata also presides over the divine powers that grant boons to maidens who pray for having healthy husbands, husbands who can maintain them well who can make them mothers of healthy childrenhealthy in body and healthy in mind,—and who pray for sufficient milk at their breast to feed and nomish their young ones You will see, that a large number, after bowing their conress, with or without offerings, are either strolling on the shore or sitting on the small parapet wall on the west of the Queen's road They do then courtesy to the waters of the sea before the appearance of the moon after sunset. When the time of the appearance of the new Moon approaches after sunset, you will see a number of eyes looking to the western horizon to find her No sooner do they see her, than they make their courtesy, at times with simply a respectful bowing, with their two hands at their foreheads, and, at times, with their usual form of courtesy known as overna, wherein they raise both their hands to the moon, and giving them a turn in two directions, apply them to their temples from their back sides ordinary homage to the new Moon, with a bow of the head and a salaam with two hands raised to the forchead, is paid even by Parsee males 1

<sup>1</sup> This or some other kind of homage to the new Moon is also observed by other people of Bombay besides the Parsees You will see hundreds, nay thousands of eyes, turned to the western horizon on a new Moon evening, to look out for the moon, and, when observed, to pay a homage to her

When one s eye catches the new Moon first he does not like to avert it from her but he quicky takes out from his purse a rupee or a silver coin. This is held to be anapicious as presaging the acquisition of much wealth and happiness. With some the first person to be seen next to the new Moon is their near one or dear one that may be close at the time. That may be a child or hubsand or wife. These customs, formerly observed generally are still observed by many. I remember having seen, when quite a child that it was on the new Moon a day that my father always liked to give pin money to my sisters. Some Parsees, even now do not make payments on the new Moon a day, and like to have payments made to them on that day.

Among the Parsess according to their acriptures, Ardvi pura the Yazata prouding over the waters, is a female deity Maongha, presiding over moon is a male deity. Among Hindus also it is a male deity

The Eclipse of the Moon like that of the Sun, was believed to be due to the interposition of an opaque body between the Moon and ourselves. The Pahlavi Dadistân I Dini speaks of it at some length 1 (S B E Vol. XVIII Chap 60 p 212) Three opaque bodies are, as it were hostile to the Moon The Shikand Gimmanik Vajâr 2 refers to this opposition. The Idea seemed to be that the moon was for the time being caught by some hostile power. The Petsians speak of the Lunar cellpse as giraft-i Mâhtâh ( \( \frac{\text{U}\_1 \text{U}\_2 \text{U}\_2 \text{U}\_3 \)) i.e., the Capture of the Moon The Pahlavi word in the Dadistân i Dini is valhduntan which is a Pahlavi synonym of the Persian giaftan

# SOME CORRESPONDING FOLKLORE MONG OTHER NATIONS

We will now refer to some of the beliefs and folkline of other cases to the people that correspond to the Iranian belief "to not be a sta and follow. Mrs. Murray Aynsley I quotes to the tarms h fat il titote the Antiquarian Reportory to say Scotland senerally and particularly amongst Highlanders, it is the costom for the vomen to make a courtesy to the new most . Lughsh women too, have a touch of this, some of them sitting a tribe a pate or etile the first evening the new Moon appear and saying "A fine moon, God bless her" The writer add that he had seen the like of this in Herefordshire In the Austrian Tyrol it is everywhere "believed that she the moon) influence in dure, therefore nothing is done in either field, tall house or wood, without first consulting the moon Only at the wane of the moon is the han cut, in order that it may not grow again too quickly"?

or show it to her (moon) the first time of Semi-Letter's seeing her. It is very unlicky to see the England and Scot moon through glass and children me told that it is wicked to point the finger at the moon or try to count the stars. A gul in Berkshire was said to have been struck dead after doing so . In Greece the proper way to stop an eclipse of the moon is to cry out "I see you.' Similar beliefs and practices survive in Judea and elsewhere 3"

Some women in Fife in Scotland did not comb their hair "at certain stages of the Moon". It was believed that "medicine for worms had to be given at the height of the moon. The worms are held to come out then '5.

<sup>&</sup>lt;sup>1</sup> Symbolism of the East and West, by Mrs Murray-Aynsley (1900) p 15 <sup>2</sup> Ibid p 16

<sup>&</sup>lt;sup>3</sup> "The Hand book of Folklore," by Charlotte Sopina Burne, p 29

Country Folklore of Fife, by J. E. Sompkins, 1914, p. 18.

<sup>&</sup>lt;sup>5</sup> Ibid p. 409

In Mexico the Moon is believed to be the wife of the Sun They believe that an eclipse of the Sun is

Moon wife of the Ca

They believe that an eclipse of the Sun is caused by domestic quarrels and to sootho the ruffled spirit of the Sun on such coose-human victims that could be found used to be

sions the ruddiest human victims that could be found used to be sacrificed to him. For sacrifices to the Moon under similar our cumstances albinos (i.e. which persons) were chosen <sup>1</sup> In Naples the idea of the Moon heing the wife of the Sini is still said to prevail. They call the Moon Janara or the wife of Janus (i.e. the Sini). A woman will call another a Janara as a term of reproach. Among the lower order in Naples, to this day the Kev (the symbol of Janus or the Sini) is used as a Talisman. This is a relie of the amoient phallic worship When at Naples in July 1888. I saw some mon and women carrying as amulets relies of phallic worship found in the ruies of Pempeti.

In the talks ( die ) or red lead marks on the forelead of some people here we find this idea of the sun being a male or husband and the moon female or wife. A Parace prest, when he puts this red mark on the forehead of the child after initioting it in the Naoyole veremony with the investiture of the Sudrah and Kust: 1 c., the sacred shirt and thread puts a long vertical mark if the child is a male and a round mark if it is female The long mark symbolizes the fertilizing or conceiving ray of the sun the round mark symbolizes the disc of the moon who is fertilized by or who receives the ocuception from the Snn by taking its rays upon herself. The male like the sun, is a conceiving agent the female like the moon is the receiving substance that takes in the conception. Hence the difference in the forms of the symbolic mark on the fore head In the East, the poets generally when they speak of the beauty of a mak compare it with that of the bun, but in the case of that of a female with that of the Moon, A beautiful woman is often spoken of as moon faced (mab ru)

164 10 2 164 p. 17 3 1164

The reason why there is much folklore about Moon

As the author 1 of the Handbook of Folklore says Moon everywhere affords the most obvious natural measurement of time, and there are few people so low in culture as not to observe the changes of the Moon

influence they are supposed to exercise on growth and increase causes agricultural operations to be largely affected by them." Thus, as all people have most to do with the Moon, as well as with the Sun, in the matter of this calculation of time and of the influence upon their agriculture, it is natural that a good deal of folklore is connected with it. The holidays of many peoples are connected with the Moon. They are what are known as "Moveable Feasts.' The Hindus, Mahomedans, Jews and Christians have such moveable feasts or holidays depending upon the changes of the Moon

The "Moveable Feasts" of the Christian Church, which are taken from the Jewish calendar, occur during three and a half months from the Shrove-tide New Moon to the Full Moon next to the Whitsuntide. Though the Christians have now the solar year of Julian or Gregory, they have still a lunar calen-The Hindus also have their holidays connected with the For example, their Holi Holidays, which, some think, have been taken from the early Diavidians who were more of eowherds than agriculturists, occur in spring on the full moon in the lunar month of Falghun It is a seasonal festival connected with the great luminaties. The burning of logs of wood on the occasion may be taken as an illustration of the scape-goat form in the scape-goat theory of Sii James Frazei The burning of the log of wood symbolizes the burning of the old year with all its evil diseases and difficulties, whatever they may be It is said, that in Mirzapur, this rule of burning a stake is known as "Sambat Jalnâ," i e. the burning of the year (savant) 2

# THE PANDITS OF KASHMIR.

(Read on the 28th of July, 1915)

### President—RAO SAHEB DR V P CHOWAN

I had the pleasure of giving a short visit to Kashmir in May

1895 in the company of two friends and
my three sons, then mere boys. I revisited
it this year at the kind my tation and in the company of
a relative and his family who went there from Calcutta. My
stay in this beautiful valley was a little longer this time. It
extended from the 27th May, when I left Kohâlâ and entered
into the precincts of the Kashmir state, to the 15th of July,
when I re-crossed its frontiers at the same place.

For the guidance of some of my readers who may choose to travel into the country, I give below a short itinerary of my travels

<sup>23</sup>rd May 1915 Left Bombay

<sup>25</sup>th May 1915 Arrived at Rawalpindi, where I stayed for two days

<sup>27</sup>th May 1915 Left Rawalpindi and arrived at Kohûlû, the frontier of the Kashinir state, where we crossed the Jheliun

<sup>28</sup>th May 1915 Left Kohâlâ and arrived at Uri

<sup>29</sup>th May 1915 Arrived at Baramula, from where the river Jhelum is navigable Stayed in a house boat on the river for 4 days

<sup>2</sup>nd June 1915 Left Baramula by boat and halted at Sapor

<sup>3</sup>rd June 1915 Left Sapor, and passing through a lagoon on the skirt of the Wolar lake and through a beautiful canal, arrived and halted at Sumbal

<sup>4</sup>th June 1915 Visited the beautiful lake of Manasbal, and returning to Sumbal, arrived and halted at Shadipur, the place of the marriage (نادي shâdi), re the union of the cold waters of the Sind river with those of the Jhelum

<sup>5</sup>th June 1915 Visited Khir Bhawani, the seat of the milk goddess

<sup>6</sup>th June 1915 Visited Ganderbal, stayed there for 4 days,

<sup>9</sup>th June 1915 Returned from Ganderbal to Shâdıpur, and went to and halted in, the side canal, leading to Srinagar

<sup>10</sup>th June 1915 Stayed at Srmagar for 16 days Visited several times the Dâl lake with its gardens—the Nasım bâgh, the Neshâr, the Sâlemar—

During this visit of Kashmir I revived my interest in the Pandits who form though a small yet an interesting race of the country. I beg to submit in this Paper the result of my inquiries and study about this people. The information was collected in the line of Ibbertson Nesficial I isley. Ethnogry phical questions, I a line more or less followed by me in my previous similar Papers. Most of the information given

the commanding peaks—the Takhi-i fulciman and the Harl Parbat the adjoiring villages and its shrines, mosques and temples.

the adjoiting villages and its shrines, mosques and temples.

28th June 1915 Left Srinagar for Islâmâbâd visiting on the way
the two great runs of Avantipur

57th June 1015. Visited the rules of the temple of Martand the temple and tank of Bhavan and the caves of Bhumjoo and went to Ashibal.

28th June 1915 Stayed at Achibal.

"9th June 1915 Went and stayed at Vernsg and visited the sacred spring of Vithasatru (Vithashta), one of the sources of the Jhelum.

30th June 1916 Went to the top of the Banihal Pars. Returned to Islamabad.

1st July 1915. Returned to Sringer Staved for 6 days.

7th July 1915 Went to Gulmang. Staved there for 6 days, during which visited Kalanmang on the 8th. Apahanvat and the key lakelot at Alpathan on the 9th.

13th July 1915 Left Gulmarg on return journey Arrived and stayed for the night at Url.

14th July 1915 Arrived and stayed for the night at Kohala.

15th July 1915. Arrived at Rawalpindi

16th July 1915 Visited the rules of Taxila in the morning and left Rawalpindi in the afternoon.

18th July 1915 Returned to Bombay

Risley s Ethnographical Giorary Vol II, referred in the Government Resolution No. 3\*86 dated 31st August 1804

Mr. B. A. Gipte (Mipur Calcinta) has, with the letter latedyl all June 1915, addressed to me as it. Secretary if the Arthripological m this paper was collected at Srinagar which is the headquarters of the Pandits of Kashmi. But advantage was taken of my visits to the shrines at Khir Bhawâm, Bhavan and other places to get further information, confirmation or corroboration.

The name of the race of Kashmir which forms the subject of this paper is Pandit (( पडित ) The word is <sup>1</sup> The name of Sanskrit and means "the learned, the wise" the Caste 1 The Brahmins of Kashmir were at one time known to be learned and versed in astrology We find an allusion m the Shâhnâmeh of Firdousi 2 to the fact of their being taken as good astrologers The fate of Shaghâd, brother of Rustam the national hero of Iran, was said to have been predicted by the astrologers of Kashmir So, it is, perhaps, that, all Kashmir Brahmins, whether learned or not, whether veised in astrology or not, have come to be known as Pandits or learned men Sir W Lawrence says "Of the 52,576 Hindus of Kashmir, 28,695 reside in Srinagar and the small towns, and the rural Hindus, who number 23,881 are scattered far and wide in the Every Kashmiri Hindu, with the exception of the Khattrı shop-keepers of Srınagar, who are known as Bohras, ıs called a Pandit or learned Biahman, a name which is in many cases given on the locus a non lucendo principle. Though not all learned they are all Brahmans, and are chiefly followers of Shiva, the lord of the mountain and the god of the hill people "3

Society of Bombay, sent me his note on my paper on "The Thakurs of Matheran" This Note was communicated by him in 1902, to Sir H Risley I am glad to learn from that note, that my above article on the Thakurs was thought to be "a good beginning," and it was hoped at the time that I would continue my investigations further on the lines suggested by him I am sorry the Note did not come to my hands at the time when it was written. Otherwise I would have made further inquiries during my subsequent visits. However I am glad, that I have continued what was "a good beginning"

<sup>&</sup>quot;The Valley of Kashmu," by Sir Walter R. Lawrence, p. 296

Sir Francis Younghusband says The population of the Washmir State is 2 905 578 and of the Kashmir Province 1 137 394. Of these 93 per cont of the Kashmir Province and 74 per cent of the whole State are Mohamedan and the remainder chiefly Hindu. But the rulers are Hindus. The linhabitants were not however always Mohamedans Originally they were Hindus. It was only in the fourteenth century that they were converted—mostly by force—to become Mohamedans. The present indigenous Hindus of the valley are generally known as Pandus and Kashmir Pandits are well known over India for their sentences and subtlety of mind their intelligence and quick withtedness.

The principal-sub-divisions aro—? The Brahman or the Curu

2 and 3 The Subdivisions

2 and 3 The Subdivisions

Pandita. There is no intermarriage between
these two classes. The priestly class thinks
much of its superiority and does not like to intermarry with the
other class. On the other hand, the lay Pandits rather under
rate the Brahman Pandits as they ask for and live on alms
and their profession is said to be a begging profession

According to Sir Walter Lawrence the lay Paudits divide themselves into two classes. He thus speaks of the three classes thus formed. The Paudits divide themselves into three classes in Kashmir the astrologer class (Joins) the priest class (Gura or Bâchabat) and the working class (Kârkun). The priest class do not intermarry with either of the other classes partly because they are regarded as divino and cut off from manking and partly because the laity abhor their practice of accepting the apparel of deceased Huidus. But the Joish and Kârkun Pandits intermarry. The Jotish Paudits are learned in the Shastras and expound them to the Huidus, and they draw up the calendars in which prophecies are made as to the events of the coming year. The priest class patform the rites and

<sup>1</sup> Kashmir described by Sir Franc 1 Younghusband (1909) p. 1º6.

eeremonies of the Unidic religion. The vast inajority of the Pandits belong to the Karkiin class and have usually made their livelihood in the employment of the State. 14

Of the Pandits of Kashini, most are the followers of Shiva, and few of Vishini. The Pandits belong to different gotras some of which are the following - I Bharat Dwaj 2 Dattatij 3 Madgah. I Kashap. 5 Upmani. 6 Got am. 7 Bhargaw 8 Pal Derw. 9 Gâragê. 10 Kunth Damyan. 11 Shalanjkayan A lugo mumber belongs to the Dattari Gotra. There are more than a hundred family stocks (krâms) to which all the Pandits belong. Some of those are the following.—Dhâr Konl Munshis. Kachrus. Tikyas. Bhans. Photadars. Zitshoas. Warkoas. Razdans. Annas. Some of these seem to have taken their names from their professions or trades.

There is no intermatriage among the members of the same 4 The limits for gotra. They intermatry with the members marriage of all gotras other than their own. The Kashmir Pandits do not intermatry with other Hindus, even if the latter be high class. Brahmans of a place like Kâsi (Benares.) If a Pandit wants to marry more than one wife, he can take his wife's sister, if he likes, for his second wife. There is no religious prohibition, but such a marriage is very rare

I think the following account of Sir W Lawrence gives a clear account of the gotias, then intermarriage, &c "The Pandits are broken up into numerous gotias, or tribunal divisions, and though the name of the gotia is repeated seven times by the Pandit as he performs his daily ablutions the outside world rarely hears it mentioned, and the Pandits are known by the Kiàm, or family appellation. There are eighteen known gotias among the Levite Brahmans and 103 among the other Brahmans in Kashmir. In one gotia there may be many Kiàms, as the following instances will show. Among the Malmas, one gotia is known as Paldo Wasgaige, and this gotia embraces families

<sup>&</sup>lt;sup>1</sup> The Valley of Kashimir ' by Walter R Lawrence, pp. 302 3

belonging to the following Kriens or tribal subdivisions -Sopuri Pandlt Mala Poot Mirakhur Kadlabaju Kokru Bangru Bakaya Khashu Kleklu Misri Khar and Mani age is forbidden within the colra and a man of the Sopuri Pandit subdivision cannot take a wife from the maidens of the Palden Washarge Gotra nor can be marry into the Banamas Paudits There is a goira known as the Dattetrys and from this goira have sprung up the great families of Kol and others less known. such as the Nagari Juse Jalah Watal Acka Sultan Ogra-Amin, Moja Bamjar, Dont Tafa Sahiu Kassu Manslal Singari Raffi Balu and Darabi As will be afterwards shown when discussing the tribes of the Musalmans, the Krain is often the rehe of a meknama applied to the ancestor of the sub-division Thus Sopuri Pundit points to the fact that the ancestor came from Sonur Lakru means fewl Bakaya eignifies that the ancestor formed one of a very numerous class in Kashmir the revenue defaulter. Khar suggests that the ancestor was connected with the iron trade Sultau that the family had close relations with one of the first line of Mussalman kings and so on

Among the leading Krams may be mentioned the following names -Tikku Ruzdan, Kak Munshi Mathu Kachri Pandit Sipru Bhan Zitshu Rama Dar Gotadar Madan Thusu Wangnu Muju Hokhu and Dulu Of these the members of the Dur family have probably been the most hillucutial though proverbs suggest that their influence has not been beneficial The Kashmurl Landits will not intermerry with the Brahmans of India. It is said that in the Rapa Sch Den a time a Mussalman in the disguise of a Landit mixed with the Ka hmiri Brahmans and learnt their Sanskrit loro. On this being discovered the Pandits in order to guard against similar frauds decided to have no intercourse with foreign Brahmans. The village people always speak of the Pandits as Bat

5 Probilitio band on sorut position. &c.

As eard above the priestly classes the Brahmin Landits or garas do not intermarry with those of the other class Among the a two class all o they are Leen as to the state of the family

A Pandit of a high family would not like to give his daughter to one of a lower status. The Pandits as a class do not follow low professions of cobblers, sweepers, boatmen, &c Some follow the professions of tailors, bakers, milkmen, tea-dealers, carpenters, blacksmiths, cooks, &c, but with such, there is very little of intermarriage by those, a little higher in the social status. As one of my informants said, an orthodox high class Pandit would not give his daughter to a young man of one of these lower classes of society, even if he were an M A of the University. It would not be long before this extreme kind of restrictions will be remedied. A young man of the new generation, who was with us, immediately said, that he would not object to give his daughter to an educated young man of a lower class.

There is no prohibition based on geographical or local position, as far as Kashmir itself is concerned. Free intermarriages exist between all the Pandits up to the limits of Punch or Kohâla. If Pandit families have lived long out of Kashmir, the local Pandits demur to give their daughters to them, until they are satisfied that they have stuck to the religious practices and customs of their class.

Then tradition is that all the Pandits descend from Rishi or another Kashmir was one of the 6 Popular tradi frontier places where the ancient Aryans, on tion about their origin coming to India, settled first Some families, especially the Kouls, are the oldest families in the country, their ancestors having come to the country some thousands of years ago Pandit Saligiam Koul, a Tearned Pandit practising in the Chief court at Simagai, in his long interesting conversation with me on the evening of 24th June at Srmagar divided the Pandits of Kashmir into another kind of two classes, mz, the Sanskut-knowing Pandits and the Persian-knowing Pandits He thus described their origin — Sultan Sikander But-Shekan <sup>‡</sup> 

<sup>&</sup>lt;sup>1</sup> Ramchan Shâh was the first of the Mahomedan kings of Kashinn He came to throne in 1323, A. D. He died in 1325. On his death, Uda yanadeva, the brother of Simha Deva, who had come to throne in 1305 became king and ruled for 15 years, On his death, Shah Mirza or Shah

who came to the throne of Kashmir in 1394 oppressed the Hundu Pandits of Kashnur Many of them left the country and only eleven remained. Sikauder's successor (1417 A D) Zam ul Ab ul din had a sore in his hand which could not be cured by any of the physicians of the country. But there was a Pandit zamindar who knew Hindu medical science He cured the Badshah! When told to ask for a recompense for his services he prayed for the exemption of his Hindu co-religionists from the pariah or poll tax. The Badshah did so and also made the Pandit zamındar his prime minister This Pandit brought back many Pandits to the country. The king asked these Pandits to learn Persian. From this time the Pandits were divided into Persian knowing Pandits and the Sanskrit knowing Pandits The Persian knowing Pandits were generally of the Khshatn or the military class of the Hindu Society The old Sanskrit knowing Pandits continued to act as gurus or priests. These two classes did not intermerry A Persian knowing Pandit's son can become a gurk Pandit but then he cannot marry in a Persian knowing family. The Persian knowing Paudits do not take aims or charity. The Persian knowing Pandits of King Zain ul Ab ul-din s time have about 21 divisions according to their golras the best of which are the Kouls who are said to have come down from Dattatri and the Tikwas or Tikus All these divisions derive their descent from 21 Rishia

Mir ruled over Kashmir for it second that a sea Male but king under the name of Shams ud-did (1343 k.D.). He was it first of the Salatti (Sultan) of Kashmir Sultan Sikandar But ahikan or leoned at who came to throne in 1304 k.D. was at this line of Sultan (cuts Sir W. Lawrence, Valley of Kashmir no. 139 for

In all Aballath i still of hear f with exteem a halalat is the (great) hing

We find the following of the fillness of the king in Lawrence Latter of Kardess, p. 19. It is sakel that the king was a the plant of a thicking a thinding account term to get has soul forth the first source or condition that by I sakel and the presenced in some set place. The king took the Jogic soul, but burn the Lish, and thence I was I did not a thinding to the I sakel and thence I was I did not be I sakel and the section.

The Sanskitt knowing Pandits igain are divided into two classes. I The quints of Brahmens proper who follow the profession of priesthood. 2 Those who are mere teachers of Sanskitt. Those of the second class are held to be superior. These two sub-classes also do not intermatry generally. The Pandits of the second sub-class belong mostly to the gotrus of Bhriat Dway, Dattatri and Madgali, which are held to be superior gotras.

The following account of the state of the country at the time helps us to understand better the story as told by the learned Pandit, Mr. Sholigram Konl. about the new division or classes

According to Sir W. Lawrence under the advice of Mihammad Khan Hamadani, the successor of Shah Hamadani whose name is home by one of the great mosques of Simagar, Sultan Sikandar carried on further his work of oppression. "Hindu temples were felled to the ground, and for one year a large establishment was maintained for the demolition of the grand Martand temples. The massive masonry resisted all efforts, and finally fire was applied and the noble buildings were cruelly defaced.

Having glutted his vengeance on Hindu temples, Sikander turned his attention to the people who had worshipped in them, and he offered them three choices, death, conversion, or exile Many fled, many were converted, and many were killed, and it is said that this thorough monarch burnt seven maunds of sacred threads of the murdered Biahmans. All books of Hindu learning which he could lay his hands on were sunk in the Dal lake, and Sikandai flattered himself that he had extripated Hinduism from the valley. It is pleasant to turn to the more enlightened reign of Zain-ul-Ab-ul-din, who succeeded to the throne of Kashmii in 1417 A.D., he is known in Kashmii as

Whatever may have been the cause, it is true that from the time of this illness the king manifested every desire to repair the wrongs inflicted on Hindus by Sikandar He remitted the Jaziah or poll tax on the Hindus, taught them Persian, and encouraged them by grants of land and in many other ways"

the great king and his long reign of fifty two years is even now quoted by the Koshmiris as the happiest period of their history

But the chief glory of the great kings reign was his tolerance towards the Brahmans He remitted the Ja m or pell tax on Hindus taught them I craim and fir revived Unida le crimi⊆ Previous to this the official language of the country was Sauskrit and it was fortunate for the Pandits and to their credit that they quickly adapted themselves to the use of Persian in the writing of which their descendants are now most proficient. It was from this time that the Brahmans of Kashmir split up into three divisions. Those who took to the use of Person and entered official life were known as the Karkun Brahmans those who adopted the functions of the priests were known as Bachhatt Pandita, while those who devoted themselves to Sanskrit learning formed the class known as the Parchia 1

Their Tradition is thus described by Sir W. Lawrence

It is a generally accepted fact that up to about the beginning of the fourteenth century the population of the valley was Hindu and that about the middle and end of the century the mass of the people was converted to Islam through the efforts of Shah I Hamadan and his followers and the violent bigotry and persecution of king Sikandar the Iconoclust Tradition affirms that the persecution of the Hindus was so keen that only cleven families of Hindus remained in the valley. Their descendants are known by the name of Malmas as distinguished from the fugitives and the Hindus of the Decean who came to bashmir later on and are known as the Banamas. Some historians, however state the Malmas Hindus to be the des cendants of Kashaf the seviour of the valley and that the Banamus Brahmans were foreigners who came from other countries. The Hindus who now live in Kashmir are with a few exceptions of the Brahman easte and though tradition points to the fact that the Levite Brahmans were a powerful

The Valley of Ka hmir by Walter R. Lawrence pp. 190 9

and numerous body, exerting great influence over the country and its rulers, there is frequent mention of the fighting class, and it is obvious that a large majority of the old Hindus must have been agricultural Jats of the Vaisya division. There are now no traces of the Jats among the Hindus of Kashini. But there are still Khattiis in Sinnigar, known as Bohras and engaged in trade, who are cut off from communion with the Khattiis of the Panjab and there are certain Mussalman tribes who trace then origin to Khattii ancestors."

On the subject of the force used to convert the Hindus Sir Walter Lawrence says, of one of the oppressing Mahomedan rulers "It was his (Asad Khan's) practice to tie up the Pandits, two and two, in grass sacks and sink them in the Dal lake, 'As an amusement, a pitcher filled with ordure would be placed on a Pandit's head and Mussalmans would pelt the pitcher with stones till it broke, the unfortunate Hindu being blinded with The Pandits, who formerly wore monstaches, were forced to grow beards, turbans and shoes were forbidden, and the 'tika or forehead mark was interdicted. It is said that the exaggerated forehead marks and the absurdly long turbans now affected by the Pandits, still serve to keep alive the memories of the tyranny of Pathan times The jazia or poll-tax on Hindus was revived, and many Brahmans either fled the country, were killed or were converted to Islam Asad Khan was succeeded by Madad Khan, and there is a well-known proverb 'Zulm-1-Asad ra rasid Madad' which means that 'Madad out-Haroded Asad' Mu Hazai was another fiend who used leather bags instead of grass sacks for the drowning of He drowned Shiahs and Brahmans indiscriminately Biahmans Atta Muhamad Khan was a ferocious libertine and his agent, an old woman named Koshib, was the terror of Brahman parents, who rather than allow the degradation of then daughters destroyed then beauty by shaving then heads or cutting their noses. In those days, any Musulman who met

<sup>&</sup>lt;sup>1</sup> Ibid p 302,

a Pandit would jump on his back and take a ride and the saving Buta chick ta khosa dita which means in Kashmiri von are a Brahman and I will mount you is still quoted. It would be wearsome to recount instances of the brutai crucity of the Pathans but at last, the oppression became so incudurable that Kashmir turned with hope to the rising power of Ranjit Singh the Lion of the Panjāb 1

The Pandits of the Brahman or priestly class do not put on leather shoes but only grass shoes. Their turbans also vary at times a little from those of other Pandits in this that they have a broader hand in the turbans.

Of the four classes of Hindus-the Brahmans Kahatria, Vashyas and Sudras -there are only two classes here Aimost all are Brahman Pandits, but there are about 50 families of Kaha tri Pandits These latter sell milk and prepare aweetments The Brahmin Pandits eat only those sweetments prepared by the Kshatri Pandits which are prepared from milk only They eat no other food cooked by the Kahatri Pandit Sir Walter Lawrence says on this point - At present the Karkun Pandit regards the pen as his natural destiny and though many have taken to agriculture and many more are looking to land as a means of employment and sub-istonce they would infinitely prefer to spend their lives as cierks in some office The Pandits of the villages consider it no degradation to follow the plough and to carry manure but the city Pandit who has not severed himself from the literary atmosphere of the capital is inclined to look down upon the Brahman agricul turlet and though he will take a wife from the villages he will not if a man of any position permit his daughter to marry into a village family. At the present time no Pauda serving out of Sringar would dream of taking his wife and family with him

The Lattey J K i km r Ly Walt r B B Lawrence (1895), pg 107 fel \* Had p 203.

While on the subject of the tradition about the descent of the Pandits I would refer to a statement of Kalhana in the Rajation and the History of ancient Kushmir. He speaks of a king Mihir Culy and depicts him as a bad ruler in whose reign the Malechhas find an ascendancy. He founded the temple of Mihiroshwar and the city of Mihirpine. On inquiring from Mr. Dava Ram, Saham the learned Superintendent of the Archæological Department of Kashmir I find that this temple and city are not as yet identified with any place. So then remains are not discovered.

New York of the Rapitarangene there haved in the city of Ministern founded by a wicked monarch named Wilin Cala the Mickins of the Irm Albari, "the Gandhara Biahmanas a low race "who "were permitted to seize upon the endowments of the more respectable orders of the priesthood's Now the question is who were these Gandhara Brahmans (गान्धाप-प्राम्भा) of the Malechcha dynasty (महन्य व्या) Who, among the modern Biahman Pandits of Kashmir are then descendants? I quote here on the subject, what I said about 20 years ago, in my Paper on 'Kashmir and the Ancient Persians' read in this room before the Bombay Branch Royal Asiatic Society?

A learned Pandit of Kashmir told me, that this is an allusion to the Persian priests of Zoroastrian faith. The King Mihni Cula having fuvomed these Zoroastrian priests, he is run down by the Biahman writer of the Rajatarangini, and the Persian priests are abused. The vory names of the king, his temple, and his city, as Mihri Cula, Mihrieshwar and Mihriapur, point to a tendency to lean towards the Persian worship of Meher or Mithias. The references to the Gandarii by the classical writers, as collected both by Wilson and Troyer, point to two different races of the Gandarii. It appears, that the Gandharas, referred to by the author of the Rajatarangini,

were not the same as those referred to in the Mahabharata but they were the same as those referred to by Herodotus ! as Gandarians and as a people of one of the twenty satrapies in which Darius Hystospes had divided his Person Empire They were the same who with the Sordians having the same acroutrements as the Bactrans formed a part of the arms of Xerxes " They are the same as those referred to by Pliny as being a tribe of Sogdiana the Sogdha of the Vendidad Thus the Gandhara Brahmins referred to by the Rayalaran gini as being preferred to the Brahmans of the country and as having won the favour of Mihir Cula were some foreigners from the further West That they were Zorosairian Mobels appears from the description given in the Rajalarangini . The writer alludes tauntingly to the oft repeated charge of the custom of marriage among the nearest kins among the ancient Persians, a charge that has been rebutted as one carelessly made by a few Greek writers on the authority of a few doubtful recorded instances of one or two increasonable Lersian monarchs.

The Kashimir Pandite have settled habits—brinagar is their 7 Settled Ha—headquarters—\ number of them live at lits—Khir Bhavani one of their favourite shrines and at Bhavan, their sacred place—Beades these places they are dispersed, though very few—in—other parts of the valley. Sir Francis—Younghusband—savs—on this subject—The hashinir Pandits are essentially—townspeople and out of the total number about half live in the city of Srinagar—But they are also scattered sparsely through the villages where the visitor will cause distinguily them by the caste mark on the forchead—On the whole they have a cultured look about them and a superior fearing—

<sup>1</sup> Auchiefe described by Sir Prancis 1 singhis by 1 1 1 7

As to the shape and materials of their dwellings, they are one-storied houses. Some are even two-storied They are mostly made of wood Wood being very cheap here, even large houses are all built of wood. For example, the storied bungalows on the hill of Gulmarg, the summer seat of Kashmir, known as huts are all made of wood The residence of the Maharaja Saheb at Gulmarg, a fine big house, is all built of wood without any buck or chunam work. Even the outer decorations are made out of the bark of trees. The houses have all open lofts at the top where grass and other sundres are kept. All houses have in the front, or on a side, small hut-like structures which are granaues to store the year's stock of grain. The roofs of most of the houses are covered over with a layer of earth which is overgrown with grass on the fall of ram in the spinig. The sheep and cattle are kept In winter, the inmates sleep in the same room in the house where the sheep are kept, so that the breath of the sheep and then woolly bodies may give gentle warmth. The windows of the house are made of fine lattice-work which gives both privacy and fresh air in the house. In winter, the latticework is closed with papers. Very few houses have fireplaces for the winter To make up for the want of this, all Kashmiris always carry a kind of sagii called kangari which is in the form of an earthen bowl They carry it over their bellies, the skin of which is generally found to be fireburnt. Sin W. Lawrence quotes a familiar proveib about this langur. It is "What Laili was to Majanu's bosom, so is the kangar to a Kashmiri"

They admit no outsiders into their caste. As one of my 8 Admission of informants said, they would not take into outsiders. Their fold even a high caste Brahman of Benares. They would not even admit him into their kitchen. If a Pandit is converted into another religion or caste, and if he repents and wants to return to the fold within a short time after conversion, he may be re-admitted, but not if he has remained away long.

The priestly class though a separate class, has no prohibition to admit into the class a son of the Pandit of the other class if he is qualified. knows his Vedas and wints to become a Brahman Pandit. There are no long orientonies for both an initiation. As told by a Brahman Pandit. a priest is one who knows Vedas. So the qualification is based more on knowledge and less on initiation percurones.

They have infant marriages generally from the age of 8 upunder the wards Those who can afford marry their
children at an early age. Those that cannot
leave them unmarried longer. As sexual liceuse is recognized
or tolerated before marriage. The married couple do not talk
with one another in the presence of the ciders of the family

They have no polyandry But polygamy is permitted.

10. Polyandry However that is not general. In ease, when Polyandry the wife is barren or when she misbehaves then they take another wife. The taking of the wifes sister in marriage is permitted. But such cases are very rare.

The marriage ceromony is known as first (nauthar) in the 11-12. Marriage Creemony is known as first (nauthar) in the 11-12. Marriage Kashmiri language. It is relebrated by two priests one from the side of the bridgeroom and the other from the bride. Lecording to one of my inform ants in very rure exceptional cases where two porces ( श्रीर) or purohis (पूराश्वित) are not available one priest can celebrate The hous (श्रीष्) ecremony forms in important part of the marriage ceremony. The fire-burning in the Lund of the hous ceremony is held to be the witness (paucile) of the marriage. No other witnesses are required. Will use do not

There is no regular form of distorce. But in cases of adulters on the part of wives and licenses of versus that temper or conduct wives are described to distorce. For reasons other than adultery limit in the generally maintain than A wif distorced.

by her husband cannot remain. At times, they live with others like kept women

In case of nate ties, it is the sons only who inherit the fither's it to be of the setates. The daughters inherit nothing between the little sons have equal shares. By wills, which must be attested they can give ligacies to daughters.

They are Hindus by religion and mostly Shivite by seet

There are very few who are Vishnavites

The now gop that is spoken of as one who was
the first founder of the Shivite form of worship. It is not
known exactly when he flourished but it is believed that he
lived some thousand years ago.

There is no distinguishing mark on the forchead whereby a Vishnavite Pandit can be distinguished from a Shivite Both have similar marks on the forchead. Both have the images of Shiva and Vishna in then houses but have greater faith upon their respective gods. Then ceremonies differ to some extent. The shraddha ceremonies among both are a little different.

The Shrifes worship, besides Shiva, the goddess Shakti who worship Shakti have a little difference in their diess. The ordinary Pandi(s who worship Shiva have a cut in their long upper garment of which the Persian-speaking Pandits speak as lab-chāk ((عناف)) lit the side torn or cut. Those who worship Shakti have not that cut in their upper garment. They eat flesh and drink while freely. There is no prohibition about intermarriages among these two classes of worshippers.

The Shivite i have in their shrines, besides the idol of Mahâdeo, those of Ganesh and some other gods. As to the offerings, they offer flower, rice, and all catables that are held to be delicious. At times cocoanuts, which are imported from India,

are also offered. The 8th and the 9th days of the menth are held to be the special days for offerings to the goddeses

17 Priests. Their presence in ceremo in the common state.

Family priests (kul purchit) generally officiate at the Janei (thread) ceremony but at marriages, priests other than the family

priests can officiate

The Pandits have a har-outling ceremony spoken of as zar

Hair-outling or two after high Family priests and family barbers both play prominent parts in this ceremony. The priest performs the hom. The ceremon is accompanied by a feast to relations and friends. In the ceremony rice walnuts sait and kash (a kind of sweet spicedeackes) with a piece of cloth are placed in a tray. These all are given to the family barber who first outs the hair. Some who can afford take the children to the sacred shrino of Ahir Bhawhii about 20 miles from prinagar to get the ceremony performed there.

They burn their dead and throw the ashes in sacred rivers

18. Disposal of the dead.

18. Disposal of the dead.

There is a river in the Lar province of which they speak as the makeli Ganga i.e. the imitation or substitute Ganga or Ganges It is held to be secred and so it is meritorious to carry the remaining bones or ashes to that river. That river is also speaken of as Harmukh Ganga under the behilf that it comes from the mouth of Hart or God.

They perform the shrd ldha ceremonies generally for three for horours of the in honour of the in the shrines they invoke all the departed worthies from the time of the first man up to mow. They perform these shrdddha ceremonies (a) during the first 12 days after death (l) evers fortulally for the first six months (c) on the month day for the next six month. (l) and then on each anniversary. Then are no special ceremonies for the childless. For accidental deaths, some extra ceremonies.

are necessary for the first twelve days (Dvâdaçı) They may be performed, if one likes, on other subsequent days also

They worship the cow Those who worship the goddess

Shakti worship swords The Shakti worshippers of the goddess special worship

Kâli

The principal occupation of the Pandits in the villages is agriculture. They are generally Zamindârs who do not cultivate the land themselves, but give it to others to farm. They are no nomadic cultivators. Many have lands assigned to them. They never work as day-labourers on the farms of others. Many of the Pandits of Srinagar who are not in the priestly line have taken to some kind of cloudal work. Very few are artizans. They work as carpenters, blacksmiths, embroidery-workers, and tailors. None are painters, fishermen or sweepers. They believe themselves to be raised above others in this, that no Pandits ever work as sweepers, cobblers, boatmen, butlers, &c.

There is no habitual prostitution among their married or unmarried women. In very rate cases, some women, who have been divorced by their husbands for bad conduct, have taken to private prostitution or live as kept women.

They eat mutton, but not beef, pork or the flesh of other animals or vermins Whatever they eat is 26 Food never the leavings of others Not only that, but they would not eat from the same dish with others or more brothers can eat from the same dish So would father and sons, two sisters, mother and daughter. Mother and son would eat together only so long as the son is of the age of about 20 Wives and husbands do not eat together. The only time they eat together is that on the occasion of marriage times, cousins or intimate friends also eat from the same dish A father may eat with his daughter from the same dish only

as long as she is about 8 or 10 years of age. No sooner the daughter marries and passes into another getra than the father coases to eat with her from the same dish even if at that time she may be a mere child of 4 or 5.

They eat fish but not fowls and eggs. Some eat water ducks. They themselves do not kill the animals they cat but it is the Mehomedans who do that. They shiften from fowls and their eggs, because as one Pandit said, fowls eat fifth things. As the Pandit at Martand said, they consider the eggs of domestic fowls as unclean (ndpdk) but can eat the eggs of birds (pakhru) which are held to be clean. Some eat the eggs of ducks and some even object to them. They do not object to the flesh of larce (haran) and birdingh. There are some among the Vishnavite I and its who abstain from flesh and fish.

The Libetan Lamas also abstain from rating eggs but they give another reason for it which at least, seems to be plausible Fluy follow Buddhasin which prohibits the taking of life. So lu my visit to one of their Gumpas or monasteries near Darjecling in 1913 I expecting that they all abstanted from ment was surpresed to see in the back part of the Gumpa a meat-safe with a large piece of flesh. On inquiring I was told. Buddha bes and Do not kill but he has not said Do not est meat So, we do not kill animals ourselves for meat but eat meat when the animals are killed by others. Then on inquiring why they abstained from eggs and fi h if not from meat, I was told that a number of men can satisfy their hunger from the flesh of one animal but they would require a large number of egg and fish to satisfy their hunger. So while the first case necessituted the taking of one life the second necessitated the taking of a number of lives. So It was better to take the life of one large animal and feed many than to take the its sof many to freel our

They take intoxicant drugs like opium and charact Some

1

In the rester of the feed of some of the non-pandit Kashmins we there cruck me much. It was the need smull in the preparatook of the eggs. They dignk two kinds of teas one sweet imxed videor e continuou and other mer which they call kann and enother mase I with side. In the edit one occasionally add a jumph of smitt, which they are is relished by some women I had the apportunity of tisting such a smill mixed lawa at the village of Dangzan and found that the taste or smell of the souff was drawned in that of the other ingredients

Among Accet obles, the orthodox Pandits abstain from omons, tomators cirror as they are supposed to exerte sexual passion and lead to a kind of exertement. They say, that according to tradition a rape had a light with a rishe. In the fight, an arrow of the rapa struck a cow. Carrots and tomatoes at first grew over the ground sorked with the blood of this wounded Hence they are tabaoed as food. The masur dâl a kind of pulse, also is condemned for a similar reason

The ancient Egyptians' absti-nence from some A comparibool

I would note here, for the purpose of comparison, some articles of food from which, according to Plutarch, the ancient Egyptian priests abstamed 'The priests do so abhor all kinds of superfluous exerements, that they not only

decline most sorts of pulse, and of flesh, that of sheep and swine which produce much superfluity, but also in the time of then purgations (1 e, fasts) exclude salt from their meals" One reason for excluding salt from food was "that it whets the appetite and renders men over-cager after meat and drink . Another reason was "that when it's hardened together, many little animals are catched in it and their dyo'. Plutaich holds this second reason to be "ridiculous

One of the reasons for prohibition against the use of wine was this Vines first grew over the blood of those men "who m

<sup>&</sup>lt;sup>1</sup> Ptutarch's Motals (translation by soveral hands in 1690), Vol. IV. pp 69 73 Essay on Isis and Oseria

ancient times waged war against the gods. Thus, dranken ness renders men besides themselves and mad they being as it were gorged with the blood of their ancestors.

As to fish some Egyptians abstained from one kind of fish and others from another kind. Thus their reasons varied The Oxyrynchutes abstained from such as are cated d with the angle and hook for having the fish called Oxyrynchus (that is, the pike) in great veneration, they are afraid, lest the book should obance to cateb hold of it and by that means become polluted. They of Syene also abstain from the Phagrus (or sea bream) because it is observed to appear with the approaching overflow of the Nile, and to present itself a voluntary messenger of the joyful news of its increase. But the priests abstain from all (fish) in general—the reason being that they recken the sea itself to be made of fire! and to lye out of Natures confines, and not to be a part of the world or an element but a preternatural corrupt and morbid exerciment.

Again, the ancient Egyptians held swine—as an inhallowed animal—because it is observed to be most apt to engender in the wane of the moon—and hocause that such as drink its milk have a loprosy and scabby roughness in their bodies.

As to the Egyptians abstluence from onlon one reason was this. Drotys the foster father of Isla as he was reaching at a handful of onlons loli into the river and was there drowned. Thus out of respect for the foster father of their God they abstanced from onlons. Other reasons were these. It is the only plant whose nature it is to grow and spread forth in the wane of the Moon. Besides it is no proper had either for such as would practise abstinence and use purgation or lar such as would observe the festivals. For the former because it causeth thirst, and for the latter because it forceth twest from these that cut it.

Fire was the Layptian levil

The wane of the moon was held to be an enemy to the Godden

According to Juvenal, the ancient Egyptians were forbidden to eat onions. They were excluded from their tables. The prohibition principally applied to the priests 2

They eat kacchi, i e, uncooked food with all Hindus, but not 27 Pakki and pakki or cooked food. There is no other caste with which they can eat

- 30 Sources of My sources of information are the follow-Information mg —
  - Pandit Saligram Koul, a learned Pandit, versed in old lore and practising as a Pleader in the courts of Sirnagar
  - 2 Pandit Bala Koul, working as a Schoolmaster, who knows Persian as well as Sanskrit, aged 60
  - 3 Pandit Vishnuji Mahtabji (gotia Dattatri), Age 55
  - 4 Pandit Shivji Vishnuji Mahtabji (of the Public Works Department), nephew of Pandit Bala Koul and son of Pandit Vishnooji Age 32 (During my inquiries from the last three gentlemen, there were also two or three other young gentlemen, who attended a High School and who spoke English well. They also helped my inquiries)
  - 5 One of my informants was the senior Pandit, supervising the moining religious service, carried on at Khir Bhavani on 5th June 1915, by a number of Pandits in the service of the Mahâiâjâ Sâheb

My occasional other informants, on some one subject or another, were some Pandits, whom I happened to meet at the

<sup>1</sup> XIV 9 Porrum et cepe nefas molare at franqere moisu, 1 e, "It is an abomination to crush or break a leak and an onion with a bite"

<sup>2</sup> According to a Greek writer, Charmides, onions were held to be useful by husbands "in deceiving a jealous wife, who, finding her husband return with his breath smelling of onions, would be induced to believe he had not saluted any one while from home" (Manners and Customs of the Ancient Egyptians by Wilkinson (1§37), Vol. II, p. 374).

rums of Martand, the shrine of Bhavan and at some villages on my way. Among these one was Pandit Lachurun who has squed his name in my not book as Pandit Lachurun Marutan Sova i.e. Pandit Lachurun in the service of the Martand temple. He is a Vishnavite claiming Barding as his rish. He is a very interesting person, and more so from the way he has been keeping his Visitors book.

Those who have visited Namk the place of pilgrimage for the sacred Codavery and such other places of pilgrimage know the practice provident there. The Brahmus there keep a note book which may be called a Visitors book in which they enter the names of pilgruns who visit the place and perform the religious ceromonies through them or under their guidance These pilgrims as it were form their elientele When in subsequent years, the same pilgrims, or their sons, or family members, visit the place of palgramage on making inquiries after their names &c they claim their natronage again and ask them to go to their houses as their clients maid guests, or laymen. This practice is seen in Kashmir also at Bhavan near which stand the old magnificent ruins of Martand which are worth seeing by all visitors of Kashmir because occurving undoubtedly the finest position in Kashmir this noble ruln Is the most striking in size and situation of all the existing remains of Kashmir grandeur 1

The above Pandit Pandit Lachurum has a Visitors book about 00 years old in which his grandfather and his father and he himself have made the visitors who saw the ruins of Martand under their guidance as electrones enter their names in their own hands. Pandit Lachurum had acted as our electrone when I had visited the ruins of Martand twenty years before on 21st May 189; in the company of two friends and my three sons. On asking my name during this see and visit he at once claimed my as her client are as one who mu!

see the rums again under his guidance, and in support of his claim showed me in his book, my and my party's signatures as visitors. The first signature in his old book bears the date 1827. Among the first signatures, I found the following names—Elphinstone, Henry Bates, A. K. Hardinge, Cl. Hardinge. Among the later signatures, I find the name of "Wedderburn, C.S., 5th September 53." Lord Roberts had visited the rums three. Once as "Lieut Roberts, H.A., June 10th, 1885." Then, as "Fred (2) Roberts, Artillery, 10-6-65." Then, as Roberts, Gl. Comment-Chief in India. This Visitors' book is worth being preserved by the Kashimi State in its Museum of Library.

<sup>&</sup>lt;sup>1</sup> The last figure is not clear So it may perhaps be <sup>1</sup>9'

<sup>&</sup>lt;sup>2</sup> The letters Cl. are not clear. They may possibly be some other letters
